^a Calculated by applying the average annual exchange rate (HRK/1 EUR) to the GDP in kuna terms.

^b From 1996 to 1998, the rate of inflation was measured by the retail price index. From 1999 on, it is measured by the consumer price index.

^c External debt indicators for the period 1998-2005 are shown on a gross basis, while the indicators for the period up to 1997 do not include interest arrears and accrual interest, hybrid and subordinated instruments, repo transactions of banks and the CNB, deposits of international financial institutions with the CNB, and one-side effects of the secondary bond market.

^d Includes principal payments on bonds, long-term trade credits and long-term credits, as well as total interest payments net of interest payments on direct investments.

^e Total balance excluding capital revenues (GFS 1986) in the period from 1999 to 2001 is shown on a cash basis. From 2001 on, total balance is shown on a modified accrual basis and includes CM, CR CPF and DAB.

^f Public debt includes general government debt and issued government guarantees.

^g Employment and unemployment rates as at November 1996 and as at June 1997.

Information on Economic Trends

Real Sector

The quarterly GDP estimate for the first quarter shows a very strong economic growth in early 2007, driven by a sharply increasing demand. GDP at constant prices rose at an annual rate of 7.0% in the observed period, primarily due to personal consumption and gross fixed capital formation accelerating by 7.1% and 11.2% respectively. Due to a slow-down in goods and services imports and a drop in foreign demand early in the year, net foreign demand gave a moderate negative contribution of 1.2 percentage points to real GDP growth. Having considerably accelerated in real terms in late 2006, government consumption rose at an expectedly lower rate of 2.8% in the first quarter of 2007. Data on GDP by the production approach indicate that GVA rose at a slightly faster rate in production activities than in service activities in the first three months of 2007, mainly due to a moderate growth of public sector GVA. GVA in hotels and

restaurants and financial intermediation recorded the highest annual growth rate (over 9.0%), and the annual growth rate in GVA in industry and trade was only a little lower.

Monthly indicators of economic activity available for April and May suggest that the positive developments in the real sector are likely to continue in the second quarter of this year.

The seasonal and calendar adjusted total volume of industrial production increased at a cumulative annual rate of 7.7% in April and May. The increase was slightly higher according to original data (8.5%) due to the different number of working days. Although such dynamics partially stemmed from the base effect, it should be pointed out that industrial production stabilised at a relatively high level in the observed period. These trends were strongly influenced by the dynamics of investment goods production, with the related demand growing at a more moderate rate since the end of the high investment period. These effects are probably short-term, as is confirmed to some extent by a continued growth of invest-

ment goods imports and decrease in inventories of intermediate goods. In the same period and in relation to a dynamic economic growth in the selected group of countries, foreign demand for investment goods had a positive effect on domestic production. However, rising inventories of consumer goods suggest that domestic demand was not strong enough to offset the effects of a weakening foreign demand for these products.

According to the NCEA, favourable trends in industry were primarily generated by manufacturing, increasing by 10.0% in the first two months in the second quarter of 2007 relative to the same period in 2006. The increase was recorded in the largest part of the manufacturing division and negative trends were observed only in the manufacture of medical equipment, which has a minor share in total industrial production.

Following a year-long contraction, energy supply (electricity, gas and water) recovered in April and May 2007. However, due to a base effect this recovery failed to make a

positive impact on the annual dynamics of energy supply, which was, as a result, 4.5% lower in the first two months of the second quarter than in the same period in 2006.

Mining and quarrying decreased in April and May 2007 relative to the beginning of the year, which could be attributed to a drop in the volume of construction works. Such trends reflect an expectedly moderate growth of capital investments, in which construction works hold a large share (the value of construction works accounts for over a half of total gross fixed capital formation).

Construction, measured by hours done on sites, decreased for the third successive months in April 2007 (seasonal effects excluded). Although more pronounced in road construction, such trends were also observed in building construction. Given the fact that net orders for building construction works grew strongly and steadily even since the second half of 2006, building construction is likely to recover in the short term. In contrast, the value of net orders for other construction works was on the decline early in the

year, which can be partly attributed to the planned reduction in traffic infrastructure investments in 2007.

Retail trade turnover continued its strong growth from early 2007 into the second quarter, primarily due to surging sales of food products, accounting for one fourth of the retail trade turnover. According to seasonally adjusted data, real retail trade turnover was up 6.7% in April and May relative to the same period in the previous year. Sales of motor vehicles and automotive fuels rose at a somewhat faster pace than other trade divisions.

Strong tourism performance in the first quarter of this year was followed by continued positive trends in tourist arrivals and nights in April and May 2007. Tourist nights grew by 9.5% over the same period in the previous year, while tourist arrivals accelerated further at double-digit rates (13.5% in April and 11.0% in May). Although this was off-peak season, it is the period when close to one fourth of total tourist arrivals and nights are usually realised.

Employment and Wages

Unemployment registered with the CES totalled 263,357 at end-May 2007, down 15,000 (5.4%) from end-April. The drop in unemployment was due to an increase in employment from the register, a rise in clearing from the register for reasons other than employment and a low number of newly registered. As shown by seasonally adjusted data, registered unemployment was 24,200 (8.3%) lower at end-May this year than at the end of the same month in the previous year.

As shown by preliminary CBS data and data on the number of the insured with the CPIA, the increase in employment from the register was coupled by a growth in total employment in May relative to April 2007. Specifically, employment stood at 1,484,522 at end-May, a rise of 13,956 (0.9%) over the same period in the previous year. The number of the insured with the CPIA increased at an annual rate of 2.8% in May, the same as in the month before. Due to labour market developments, the registered unemployment rate was 15.1%

at end-May, down by 1.2 percentage points relative to the same month in the previous year. This was the lowest registered unemployment rate since 1997.

Real gross and net wages accelerated annually in May relative to April, primarily due to an acceleration of nominal gross and net wages in that period. The annual growth rate of the average real gross wage was 4.5% in May, an increase of 1.9 percentage points compared with April. Due to tax progression, the real net wage rose at an annual rate of 3.4% in May this year, which was lower than the growth rate of the real gross wage and 1.6 percentage points lower than in April.

Prices

The total CPI increased by 0.5% in May on the previous month and the year-on-year consumer price inflation rate dropped from 2.3% in April to 2.2% in May. Consumer prices were down 0.4% in June compared with May, with

Consumer Price Index, year-on-year rate of change

	Weight	4/2007	5/2007	6/2007

their year-on-year inflation rate down to 1.9%.

The monthly increase in prices in May was primarily driven by clothing and footwear prices (up 0.2 percentage points) and prices of tobacco, fruit, cars and package holidays (up 0.1 percentage point respectively). Tobacco prices were up by an average 2.9% in May from April and that was the first significant rise in these products prices since August 2004. The monthly price rise in May was exclusively due to an increase in producer prices of tobacco products, whereas in August 2004 it resulted both from an increase in excises on tobacco products and in their producer prices. With most of the said products contributing by their monthly increase in May to overall consumer price inflation growth included in the core inflation basket, core inflation increased by a significant 0.7% in May relative to the previous month and from 2.6% year-on-year in April to 2.8% in May.

The monthly rise in the overall CPI in June was to a great degree due to vegetable prices falling by 0.3 percentage points and heat energy and car prices dropping by 0.1 percentage point respectively, and to a small extent to a seasonal rise in catering and accommodation services. The core CPI was up 0.1% in June compared with the previous month, and the year-on-year core inflation rate dropped by 0.4 percentage points to 2.4%.

The overall PPI grew 0.4% from the previous month, in consequence of the price increase in intermediate goods (especially metal), energy (refined petroleum products) and non-durable consumer goods (tobacco products). The overall CPI rose again for the month in June (by 0.4%), with the most significant growth recorded in intermediate goods and durable consumer goods.

The year-on-year rate of change in industrial producer prices increased by 0.6 percentage points in May and June, i.e. from 2.3% in April to 2.9% in June. Intermediate goods and energy rose at the highest rates in June, 4.9% and 3.5% respectively. Although refined petroleum products prices rose by 2.6% in May and by 0.2% in June respectively over the previous month, their year-on-year rate of change remained negative at -1.8% in June. Furthermore, the year-on-year rates of change of final products were low in June (1.0% for durable consumer goods and 2.0% for non-durable consumer goods), which is an indication that the price increase in intermediate goods and energy failed to considerably spill over to final goods prices.

Figure 15

Exchange Rate

The kuna/euro exchange rate was stable in June. The increase in foreign exchange demand and consequent mild depreciation pressures created on the domestic foreign exchange market in early June resulted in the value of the euro reaching HRK 7.34/EUR on 7 June. In the last ten days of June, the kuna/euro exchange rate started to appreciate slightly, standing at HRK 7.30/EUR on 30 June. The end-June kuna/euro exchange rate was up by mere 0.1% over that at end-May (HRK 7.31/EUR) so that there was no need for central bank foreign exchange auctions to be held in June.

As anticipated, the ECB on 6 June raised its benchmark rate from 3.75% to 4.0%, while the Fed's benchmark rate remained unchanged at 5.25%. Favourable labour market indicators and rising yields on US treasury bonds pushed up the US dollar in the first half of June. This was followed by a depreciation of the US dollar/euro exchange rate, which was predominantly due to market concern over unfavourable real estate market indicators. The kuna/US dollar exchange rate strengthened slightly (by 0.3%) in June.

The kuna exchange rate also strengthened by a nominal 0.7% against the Swiss franc at end-June compared with end-May, weakening by 1.0% versus the pound sterling. Due to these exchange rate developments and a slight appreciation of the kuna against the euro and US dollar, the index of the daily nominal effective exchange rate of the kuna appreciated by 0.1% from 31 May to 30 June 2007.

The average monthly index of the nominal effective kuna exchange rate held steady in April compared with March, whereas the index of the real effective kuna exchange rate deflated by producer prices depreciated by 0.1%. In contrast, due to a slightly faster growth of domestic than foreign prices, the index of the real effective kuna exchange rate deflated by consumer prices appreciated by 0.2% in that month.

Figure 16

^a The fall of index denotes appreciation of the kuna.

Figure 17

^a The fall of index denotes real appreciation of the kuna.

Monetary Developments

In May 2007, domestic sources of funds grew, thus enabling banks to reduce their foreign liabilities in addition to financing domestic placements.

Money (M1) continued its growth, started at the end of the first and the beginning of the second quarter, however less intensively, as was confirmed by the movements of its seasonally adjusted value. M1 went up by a total of HRK 0.8bn or 1.7% in May, reaching HRK 48.7bn at the end of the month. The annual growth rate of this monetary aggregate again mildly decreased, ending the month at 19.4%.

The greatest contribution to the May increase in money came from the growth in demand deposits, which went up by HRK 0.6bn. Broken down by sector, demand deposits of both households and corporates contributed equally to the increase. At end-May, total current account and giro account balances with banks were HRK 33.7bn, up 21.5% compared with the end of the same month the previous year.

The other component of money, currency outside banks, rose by HRK 0.2bn in May, standing at HRK 14.9bn at the end of the month. The average daily balance of this monetary aggregate in May 2007 was up 15.7% compared with the same period a year ago.

In May, kuna non-monetary deposits saw a healthy growth, when kuna savings and time deposits went up by a total of HRK 1.3bn or 2.8%. Kuna deposits of other banking and other financial institutions accounted for the lion's share of the increase (HRK 0.9bn), while kuna corporate deposits made up the remaining share (HRK 0.4bn). At end-May, total kuna non-monetary deposits were HRK 48.6bn, with their annual growth rate, although mildly decreased, holding steady at a high 38.8%.

In May, foreign currency deposits, expressed in kuna, remained at the level attained over the previous month largely due to the appreciation of the kuna against the euro. If we exclude the effect of the exchange rate, foreign currency deposits rose by 1.0%, with the foreign currency corporate deposits growing at the fastest rate of 2.9%. Total foreign currency deposits reached HRK 91.2bn at the end of the month, with their annual growth rate rising to 12.9%, partly due to the effects of the base period.

Thanks to the growth of both components of the monetary aggregate M4, particularly quasi-money, total liquid assets increased by HRK 2.6bn or 1.4% in May, reaching HRK 189.6bn at the end of the month, up 19.9% compared with the end of May last year.

Although bank lending has been strong since the beginning of 2007, the growth of placements in the first five months was slightly slower than over the same period last year. If we exclude the effect of the exchange rate, total placements went up by 8.2% in the first five months of the year, while the increase observed over the same period last year was two percentage points higher, totalling 10.2%. Increasing by HRK 2.4bn or 1.3%, bank placements to the non-banking sector totalled HRK 196.6bn at the end of May, while their annual growth rate stood at 21.4%, down 1.5 percentage points compared with the end of 2006.

Household loans contributed the most to the growth of total placements in May, increasing by HRK 1.4bn or 1.3%. All-purpose loans (HRK 0.7bn) and housing loans (HRK 0.6bn) accounted for the majority of total household loans. Total loans to the household sector reached HRK 103.3bn at the end of May, with their annual growth rate totalling 21.6%. Banks also continued with strong lending to the corporate sector. Increasing by HRK 1.0bn in May, bank placements to the corporate sector reached HRK 89.4bn, with their annual growth rate totalling 21.7%.

Bank placements to the central government, same as government deposits with banks have not much changed in May. As a result, banks' net claims on the central government narrowed only mildly, by HRK 0.1bn, ending the month at HRK 14.8bn, which is 32.1% less than at the same time last year.

Banks continued reducing their foreign liabilities, which after having shrunk sizably in March and April (by HRK 4.1bn), decreased by further HRK 0.5bn in May, to HRK 73.6bn. These developments in May, paired with the fact that banks' foreign assets held steady, improved banks' net foreign assets. At end-May, net foreign assets (NFA) of banks stood at HRK -38.9bn.

Growing demand for reserve money marked June developments, which was especially prominent in the second half of the month. The CNB met banks' demand for liquidity at regular weekly reverse repo auctions.

The average amount of funds placed at regular reverse repo auctions in June stood at HRK 3.9bn, same as in May. At the first three auctions, some banks offered a higher repo rate, of 3.55% and 3.6%, in order to ensure the required funds, while the CNB accepted all bids at the marginal repo rate of 3.5%. Even with a high level of free reserves at their accounts, which reached HRK 1.5bn at the end of the month, banks' demand totalled HRK 5.4bn at the last auction. In order not to create surplus liquidity, the CNB declined 25% of received bids. After that auction, one bank used a Lombard loan worth HRK 373m.

In addition to regular reverse repo auctions, the CNB cre-

ated liquidity in June by a bilateral reverse repo transaction worth HRK 1.3bn. This transaction, same as last year, created sufficient liquidity to finance the repayment of debt to pensioners and is to be carried out until the privatisation revenues come in, which is expected by the end of this year.

At end-June, reserve money (M0) stood at HRK 48.4bn, up HRK 1.9bn on end-May. Its annual growth rate totalled HRK 16.3%. The continuously high level of reserve money was generated by the growth of currency outside banks as well as strong banks' demand for free reserves. Currency outside banks went up by HRK 1.2bn in June, as a result of seasonal factors (good start of the tourist season and long weekends) and the repayment of the third instalment of the debt to pensioners. Additional demand for reserve money was generated by the first sizeable subscription of CNB bills on 20 June 2007 and the announcement of the kuna government bond issue in July. However, the kuna reserve requirement mildly decreased.

At the end of June, international reserves of the CNB stood at EUR 9,168m, down by EUR 283m on the end of May. This was almost primarily a result of the EUR 259m decrease in the marginal reserve requirement. As there were no foreign exchange auctions, net usable international reserves have not changed much, totalling EUR 6,602m at the end of June. In the first half of 2007, they went up by EUR 158m.

Money Market and Interest Rates

Money market interest rates, relatively low and stable for over a year, with rates on overnight interbank loans rising moderately from below 2% to 4%, increased unusually sharply and became much more volatile in May and June 2007. As the available data suggest that banking sector liquidity remained comfortable in that period, such interest rate trends could be attributed to an uncommon imbalance

between supply and demand, which was due to the fact that a small group of banks generated considerable demand for the kuna, while the participants having excess funds placed them at higher rates, rather than at a regular prices. Specifically, demand for these participants' excess kuna liquidity in the observed period was spurred by banks' continued strong lending in kuna, investors' preparations for the purchase of the second tranche of the ten-year kuna government bond to be issued in July 2007, government's preparations to finance the payment of the third instalment of debt to pensioners and higher levels of currency outside banks due to the start of the tourist season. The central bank sustained good aggregate liquidity in the banking sector by reverse repo auctions, recording historically high amounts of kuna liquidity issued in May and June, but no additional kuna liquidity has been created in 2007 through CNB's foreign exchange interventions, which was another factor causing a lower supply of the kuna on the money market.

Due to these developments, the average daily turnover in direct interbank trade in overnight loans rose significantly from HRK 597.0m in April to HRK 733.9m in May and HRK 1,042.6m in June. Consequently, the weighted interest rate on these loans increased from 3.67% in April to 4.39% in May and 5.98% in June. The daily weighted interest rate on overnight loans in direct interbank trade ranged between 1.71% and 9.52% in June. The average daily turnover in overnight loans intermediated by the ZMM, standing at HRK 63.6m in April, went up to HRK 74.6m and HRK 87.7m in May and June respectively.

Although only three MoF T-bill auctions were held in May and June, the related demand was much lower than in the previous months, which was partly a result of higher yields achievable on the money market. Weighted interest rates on 91, 182 and 364-day T-bills thus did not change significantly relative to April, standing at 3.00%, 3.20% and 3.54% respectively. The stock of total subscribed T-bills declined to HRK 12.6bn at end-June.

Bank interest rates on short-term corporate loans, long-term corporate loans and short-term household loans were higher in May than in March, while the only rates that remained low were those charged on long-term household loans. Bank interest rates on foreign currency deposits continued a several-month upward trend and rates on kuna deposits not indexed to foreign currency also rose.

The weighted interest rate on short-term kuna corporate loans not indexed to foreign currency increased from 6.68% in March to 6.80% in April and stood at 6.74% in May. Although it dropped to 5.93% in April 2007, the weighted interest rate on long-term kuna corporate loans indexed to foreign currency reached its highest level since May 2004, standing at 6.32% in May. The weighted interest rate on short-term household loans not indexed to foreign currency, continuing growth observed in the whole 2007, stood at 12.23% in May. As usual, the largest impact on this interest rate trend came from expensive overdraft loans, whose share in total newly-granted short-term household loans not indexed to foreign currency was 87.8% in May. The weighted interest rate on foreign currency indexed long-term kuna household loans dropped from 6.44% in March to 6.06% in

April and further to its all-time low of 5.91% in May.

The weighted interest rate on kuna time deposits not indexed to foreign currency maturing in up to three months continued to grow, standing at 3.29% in April and at 3.51% in May. The weighted interest rate on foreign currency time deposits maturing in up to three months, standing at 3.82% in March, reduced to 3.77% in April and rebounded to 3.98% in May.

As the weighted interest rate on kuna loans not indexed to foreign currency increased and the weighted interest rate on kuna deposits not indexed to foreign currency almost held steady, their spread expanded from 6.95 percentage points in March to 7.3 percentage points in April. The spread was 7.05 percentage points in May, as a result of a drop in the weighted interest rate on kuna loans not indexed to foreign currency and concurrent increase in the weighted interest rate on kuna deposits not indexed to foreign currency. The spread between the weighted interest rate on kuna loans indexed to foreign currency and that on foreign currency deposits narrowed to 2.98 percentage points in April and drifted only slightly upwards in May.

Balance of Payments

As shown by preliminary CBS data, goods exports totalled USD 4.6bn (EUR 3.5bn) in the January to May period, while goods imports were USD 10.1bn (EUR 7.6bn). The foreign trade deficit was thus USD 5.4bn (EUR 4.1bn), up by a substantial 24.7% (in USD terms) or 14.8% (in EUR

terms) compared with the first five months in 2006. This brought down the imports/exports coverage rate from 47.7% in the January to May period in 2006 to 46.0% in the same period in 2007.

Expressed at constant exchange rates, foreign trade trends suggest a marked slowdown in the annual growth of total goods exports in the first five months of 2007 compared with the same period in 2006 (9.7% and 20.0% respectively). The slowdown was to a large extent due to decreasing exports in the SITC division comprising other transport equipment (mostly ships) and manifestly slower growth in exports of oil and refined petroleum products, which were the top contributors to exports surge in the first five months of 2006. These trends, especially regarding ship exports, should be taken with some reserve due to the noise that ship exports observed in shorter periods cause in the time series of total goods exports. With the said divisions excluded from the total goods exports, the slowdown in growth becomes much less pronounced (having risen at 15.3% in

Balance of Payments (preliminary data), in million EUR

	Jan.-Mar. 2006	Jan.-Mar. 2007	Indices Jan.-Mar. 2007/ Jan.-Mar. 2006
Current account	-1,984.9	-2,617.4	131.9
Capital and financial account (excl. reserves)	3,859.8	5,423.2	140.5

the first five months of 2006, this aggregate increased at 12.3% in the same period in 2007). The largest drop in the period from January to May 2007 was observed in exports of electricity, coffee, tea cocoa and spices, whereas exports of electrical machinery, apparatus and appliances and wood and cork contributed positively to total exports growth.

Total imports of goods also slowed annually in the first five months of 2007, but much less than exports (14.0% relative to 18.6% in the same period in 2006). The slowdown was partly due to the price drop in crude oil on the world market, which considerably offset the annual growth in its import value. Furthermore, imports of natural and manufactured gas, sugar, sugar preparations and honey reduced. In contrast, road vehicle imports grew further (14.9%), although this rate was slower than in the same period in 2006 (19.4%). The increase in total goods imports was also considerably driven by imports of iron and steel, up by over a half. Also contributing strongly to the growth of goods imports were imports of capital goods (machinery and transport equipment, excluding other transport equipment and road vehicles), growing annually at 12.0%. This rate, although lower than in the first five months of 2006, was still relatively high, primarily in consequence of the increase in imports of general industrial machinery and equipment and electrical machinery, apparatus and appliances.

Government Finance

According to MoF data, consolidated central government revenues were HRK 35.5bn in the first four months of 2007, rising at a high annual rate of 15.7%. The largest contribution to growth came from profit tax revenues, growing annually by 108.2%, due to the amendments made to the Act on the Financing of Local and Regional Government and Self-Government Units (OG 132/2006), providing for the allocation of the full amount of profit tax to the government budget. With a major portion of income tax revenues allocated to local government units, these revenues decreased by

a substantial 52.8% at the central government level. Also contributing strongly to total revenue growth were VAT revenues and social security contributions, up at annual rates of 12.9% and 11.2% respectively. Excise revenues rose by a marked 10.7% in the observed period, spurred primarily by rising revenues from excises on refined petroleum products and from excises on cars. Excise revenues are likely to grow at more moderate rates in the remainder of the year, since excises on all types of unleaded petrol were lowered in May.

Consolidated central government expenditures amounted to HRK 34bn in the January to April period in 2007, a rise of 6.4% over the same period in the previous year. The rise was primarily due to expenditures on social benefits, up at an annual rate of 6.1%, and expenditures on compensation of employees, rising by 9.4%. Also strongly contributing to the rise in the observed period were expenditures on the use of goods and services, increasing annually by 16.6%. In contrast, interest expense declined by 6% due to lowered foreign interest, and expenditures on subsidies to private enterprises also dropped considerably (8.2%). Additionally, considerable expenditures were made for the acquisition of non-financial assets (HRK 1.7bn), loans granted (HRK 0.2bn) and shares and other equity (HRK 0.1bn).

The consolidated central government deficit totalled HRK 528m in the first four months of 2007 (GFS 1986, on a cash basis), which was a decrease of HRK 2.8bn or as

Figure 36

much as 84.2% compared with the same period in the year before. The fiscal adjustment of this size was primarily enabled by a sharp increase in budget revenues which was coupled by a moderate growth of expenditures. The deficit was mostly financed by domestic borrowing and to a small extent by the disposal of non-financial assets and the disposal of shares and other equity.

According to CNB data, total central government debt, inclusive of CBRD debt, stood at HRK 109.7bn at end-April, a rise of HRK 1.2bn over end-2006. Domestic central government debt increased by HRK 2.6bn, primarily on account of a rise in liabilities for bonds (a ten-year bond, nominally

worth HRK 2.5bn, was issued in February) and T-bills. External central government debt declined by HRK 1.3bn in the same period, with a decrease in both external liabilities and liabilities for bonds payable (including the repayment of the first instalment to the London Club for Series A bonds) and loans.

At end-April 2007, government guarantees issued amounted to HRK 15bn, increasing by HRK 0.8bn compared with end-2006. Domestic guarantees continued to grow (HRK 0.9bn), while foreign guarantees drifted lower (HRK 0.1bn).

Statistical Survey

Classification and Presentation of Data on Claims and Liabilities

Data on financial institutions' claims and liabilities are classified according to institutional sectors and financial instruments. Institutional sectors are: financial institutions, central government and funds, other domestic sectors and foreign sector.

The financial institutions sector includes the following sub-sectors: monetary authorities (the central bank), banks, other banking institutions and non-banking financial institutions. The central bank is the Croatian National Bank (CNB). Banks are institutions to which the Croatian National Bank has issued a license to perform banking business services in accordance with the Banking Act, including savings banks during a transition period. Data on banks do not include claims and liabilities of banks undergoing bankruptcy proceedings, nor former branches of banks headquartered outside the Republic of Croatia. Other banking institutions comprise housing savings banks, savings and loan cooperatives and investment funds. Non-banking financial institutions are financial institutions not classified as banks or other banking institutions (for example insurance companies, pension funds).

The central government and funds consists of two sub-sectors, the Republic of Croatia and central government funds. Until December 2003, the sub-sector the Republic of Croatia included government authorities, including the Croatian Roads and the Croatian High-

ways, the State Agency for Deposit Insurance and Bank Rehabilitation and the sub-sector central government funds included the Croatian Institute for Health Insurance, the Croatian Pension Insurance Institute, the Croatian Employment Service, the Croatian Privatisation Fund, the Croatian Waters and the Croatian Bank for Reconstruction and Development.

Since January 2004, the Croatian Roads, the Croatian Highways, and the State Agency for Deposit Insurance and Bank Rehabilitation have been reclassified, from the sub-sector the Republic of Croatia to the sub-sector central government funds.

Other domestic sectors include local government authorities, public and other enterprises and households, including craftsmen and non-profit institutions providing services to households. The sub-sector other enterprises also comprises banks undergoing bankruptcy proceedings. In some tables other domestic sectors are divided into the following sub-sectors: local government (which comprises units of local and regional self-government), public and other enterprises, and households (including craftsmen and non-profit institutions).

Foreign sector includes foreign legal and natural persons.

All data on claims and liabilities refer to balances at the end of the reporting period. Foreign exchange items are reported in their kuna equivalent at the CNB's midpoint exchange rate at the end of the reporting period.

^a Domestic credit decreased by a one-off HRK 2,759.4m.**Table A1: Monetary and Credit Aggregates**

The table shows data on some basic monetary and credit aggregates, including their monthly growth rates. In September 1999, all the monetary aggregates were revised. In previous publications of the CNB, data on claims and obligations of savings banks were not included in the compilation of the monetary aggregates.

Reserve money is taken over in its entirety from the Monetary Authorities Accounts (Table C1).

Money (M1) is defined in the same way as the corresponding item in the Monetary Survey (Table B1). It comprises currency outside banks, deposits with the CNB by other banking institutions and other domestic sectors as well as banks' demand deposits. Money (M1a) comprises currency outside banks and banks' demand deposits, increased by the demand deposits of the central government and funds with banks.

Broadest money (M4) comprises Money (M1), savings and time deposits, foreign currency deposits as well as bonds and money market instruments (all components are taken over from the Monetary Survey, Table B1).

Net domestic assets are defined as a difference between total liquid assets and foreign assets (net).

Domestic credit comprises banks' claims on other domestic sectors, other banking institutions and non-banking financial institutions.

In May 1999, bankruptcy proceedings have been initiated against several banks so their assets and liabilities are excluded from monetary statistics. In April 1999, those banks' share in monetary aggregate M1 amounted to 259.5 million kuna and in monetary aggregate M4 amounted to 4,035.8 million kuna. Data for June 1999 are comparable with data for July 1999 if Domestic credit is increased by 3,513.5 million kuna.

^a The first revaluation of securities with the effect of HRK 165.5m was conducted within the CNB's international reserves as at 31 December 2001. Accrued interest on deposits, with the effect of HRK 63.8m, was included in the international reserves as at 31 December 2001 as well. The CNB's foreign liabilities increased by HRK 6.4m on the basis of accrued interest, while liabilities on the basis of required foreign exchange reserves increased by HRK 8.6m.

Table B1: Monetary Survey

The monetary survey shows consolidated data from the Monetary Authorities Accounts (Table C1) and Banks' Accounts (Table D1).

Foreign assets (net) are the difference between total foreign assets and total foreign liabilities of the CNB and banks.

Domestic credit is the sum of corresponding items from Monetary Authorities Accounts and Banks' Accounts. Claims on central government and funds are reported on a net basis, i.e. decreased by central government and funds' deposits with the CNB and banks.

Money is the sum of currency outside banks, deposits by other

banking institutions with the CNB, deposits by other domestic sectors with the CNB and banks' demand deposits (item Demand deposits in Banks' Accounts, Table D1).

Items Savings and time deposits, Foreign currency deposits as well as Bonds and money market instruments are entirely taken over from the Banks' Accounts, while item Restricted and blocked deposits represents the sum of corresponding items from the Monetary Authorities Accounts (excluding banks' blocked deposits with the CNB) and Banks' Accounts. Other items (net) are unclassified liabilities decreased by unclassified assets.

Table B2: Number of Reporting Banks and Savings Banks and their Classification by Total Assets

The table shows the total number of banks and savings banks during the transition period which report monthly to the CNB. Their operations are shown in the Banks' Accounts. Monetary statistics includes reporting institutions under liquidation and, until February 2005, institutions whose operating licences have been revoked, but which have not initiated liquidation proceedings.

Special reporting requirements applied to savings banks until June 1995. Savings banks were not legally obliged to report on their operations, so that data up to June 1995 relate only to those savings banks that reported voluntarily to the CNB. From July 1995 on, the data cover all registered savings banks.

The table also shows the classification of reporting banks and savings banks according to their total assets.

^a From October 2001 to May 2003 Liabilities to foreign banks include also liabilities based on CNB bills subscribed by non-residents.

^b In December 2002, CDA accounts with the CNB for the gross and net settlement of purchased securities have been reclassified from the sector central government to the sector other financial organisations.

Table C1: Monetary Authorities Accounts

The table reports data on claims and liabilities by monetary authorities.

Foreign assets include the following forms of foreign currency and kuna claims on foreign legal and natural persons: monetary gold, holdings of special drawing rights, foreign cash in vault, reserve position in the International Monetary Fund, current account balances with foreign banks, time deposits with foreign banks and accrued interest, foreign currency security investments and other claims.

Claims on central government and funds are loans and overdue claims on the budget of the Republic of Croatia. In accordance with the Croatian National Bank Act that entered into force in April 2001, the Croatian National Bank may not extend credit to the Republic of Croatia. Hence, this item comprises only overdue claims on the budget of the Republic of Croatia based on the payment system operations and the liabilities to the IMF and foreign banks. Until April 2001, Claims in kuna were short-term loans granted for the purpose of overcoming timing differences between incoming revenues and execution of budgetary expenditures, long-term loans granted by special decrees by the government of the Republic of Croatia, and overdue claims on the budgetary central government, while Claims in foreign currency was a counter-entry to the liability to the IMF based on the succession of membership in that institution.

Claims on other domestic sectors are loans and overdue claims on other domestic sectors, including banks in bankruptcy proceedings.

Claims on banks are credits to banks and overdue claims on banks. Credits to banks comprise Lombard credits, short-term liquidity credits, other credits and reverse repo transactions. Item Lombard credits comprises credits to banks for regular maintaining of the day-to-day liquidity, which were replaced by lombard credits in December 1994. Short-term liquidity credits, which have been granted since the beginning of 1999, also serve to bridge liquidity problems. Other credits include intervention credits, special credits for bridging liquidity problems granted in the past (initial credits, prerehabilitation credits), due but unpaid credits and banks' deposits with the CNB. From April 2005 on, reverse repo transactions are conducted on a weekly basis. Overdue claims on banks comprise settlement account overdrafts (until mid-1994) and banks' failure to correctly and promptly allocate and maintain statutory reserve requirements.

Since May 1999, Claims on other domestic sectors include overdue claims on banks against which bankruptcy proceedings have been initiated. Due to the reclassification of savings banks from the

sub-sector other banking institutions to the sub-sector banks, data for Claims on banks and Claims on other banking institutions have been revised.

Reserve money consists of currency outside banks, cash in banks' vaults, banks' deposits with the CNB, other banking institutions' deposits and other domestic sectors' deposits with the CNB. Banks' deposits are: settlement account balances, statutory reserves deposited on a special account with the CNB (including, from March 2006, special reserve requirement on liabilities arising from issued securities), CNB bills on an obligatory basis and overnight deposits. Deposits by other banking institutions included, until September 2003, settlement account balances of housing savings banks. Deposits by other domestic sectors are other domestic sectors' giro account balances which, on the basis of legal acts are deposited with the Croatian National Bank.

Restricted and blocked deposits include required foreign exchange reserves and accrued interest, restricted deposits and blocked foreign exchange deposits. Banks are required to set aside the reserve requirements against certain foreign exchange sources of funds and the marginal reserve requirements (from August 2004 on) in special accounts at the Croatian National Bank. Restricted deposits are kuna funds set aside on the basis of a court order or legal regulation, kuna funds set aside in the period between May 1999 and April 2002 and deposits of banks against which bankruptcy proceedings have been initiated. Blocked foreign exchange deposits are funds that were set aside in special accounts at the Croatian National Bank for repaying unpaid amounts due to foreign creditors.

Foreign liabilities include use of IMF credits, liabilities to international financial institutions and foreign banks and accrued interest.

Central government and funds deposits are demand deposits and foreign currency deposits of the Republic of Croatia and central government funds with the CNB, and CNB bills purchased by central government institutions.

CNB bills are kuna and f/c CNB bills on a voluntary basis, excluding CNB bills voluntarily purchased by central government institutions.

Capital accounts include reserves, provisions and the income and cost accounts.

Other items (net) are unclassified liabilities decreased by unclassified assets of the Monetary Authorities Accounts.

Due to the reclassification of savings banks from the sub-sector other banking institutions to the sub-sector banks, data for Currency outside banks, Banks' cash in vaults, Banks' deposits and Deposits of other banking institutions were revised.

Table D1: Banks' Accounts

Banks' Accounts include data on banks' claims and liabilities. Banks' mutual claims and liabilities are consolidated.

Required reserves held at the central bank include kuna and foreign exchange reserves. Kuna reserves include vault cash and kuna funds held in accounts at the central bank. Foreign exchange reserves include foreign exchange held in CNB's foreign exchange accounts.

Foreign assets are the following forms of kuna and foreign currency claims on foreign legal and natural persons: foreign cash in vaults, deposits with foreign banks (including loro letters of credit and other collateral), securities, loans, and equities.

Claims on central government and funds are the following forms of claims in kuna and foreign currency: securities and loans.

Claims on other domestic sectors include the following claims in kuna and foreign currency: money market instruments, bonds, loans (including acceptances), and equities.

The same forms of kuna and foreign currency claims are included in claims on other banking institutions and non-banking financial institutions, with one difference: Claims on other banking institutions also include deposits with those institutions.

Items Demand deposits, Savings and time deposits, Foreign currency deposits as well as Bonds and money market instruments comprise banks' liabilities to other domestic sectors, other banking institutions and non-banking financial institutions.

Demand deposits include giro and current accounts balances and banks' obligations arising from kuna payment instruments issued, minus currency in the payment system, i.e. checks in banks' vaults and checks in collection.

Savings and time deposits are kuna sight deposits as well as kuna

time and notice deposits.

Foreign currency deposits are foreign currency sight deposits as well as foreign currency time and notice deposits.

Bonds and money market instruments are banks' liabilities for securities issued (net) and loans obtained. Issued subordinated and hybrid instruments, purchased by foreign investors, are excluded from this item.

Foreign liabilities comprise the following forms of kuna and foreign currency liabilities to foreign legal and natural persons: giro and current accounts, savings deposits (including loro letters of credit and other forms of collateral), time deposits, loans received and liabilities due. Issued subordinate and hybrid instruments, purchased by foreign investors, are also included in loans received. Central government and funds' deposits are all forms of banks' kuna and foreign currency liabilities (except restricted and blocked deposits) to the central government and funds.

Credit from central bank comprises loans obtained from the CNB and deposits by the CNB with banks. Repurchase of securities is also considered and treated as a loan.

Restricted and blocked deposits comprise the following banks' liabilities: kuna and foreign currency restricted deposits by other domestic sectors, other banking institutions, non-banking financial institutions, central government and funds as well as foreign legal and natural persons; and households' blocked foreign currency deposits, regulated by the Act on Converting Households' Foreign Exchange Deposits into the Public Debt of the Republic of Croatia.

Capital accounts are share capital, profit or loss for the previous and current year, retained earnings (loss), legal reserves, reserves provided for by the articles of association and other capital reserves, hedging reserves, unrealised gains (losses) from financial assets clas-

sified as available-for-sale assets, value adjustments and specific reserves for unidentified losses.

Other items (net) are unclassified liabilities decreased by unclassified assets, including the fair value of derivative financial instruments.

Tables: D2 – D12

This group of tables (with the exception of Table D5) represents an elaborate presentation of appropriate items of claims and liabilities of Banks' Accounts (Table D1).

Table D2: Banks' Foreign Assets

This table shows banks' claims on foreign legal and natural persons.

Foreign assets of banks' comprise foreign assets in kuna and foreign currency.

Claims on foreign banks and Claims on foreign non-banks (total and by financial instruments) are shown separately within both foreign assets in kuna and in foreign currency.

Table D4: Banks' Claims on Other Domestic Sectors

The table shows banks' kuna and foreign currency claims on other domestic sectors, classified according to financial instruments: money market instruments (including factoring and forfaiting since

January 2004), loans and advances (including acceptances and purchased claims), and equities.

Until October 1994, foreign currency loans could be granted only when banks simultaneously borrowed abroad in their own name and for the account of the end-user.

Table D6: Demand Deposits with Banks

The table shows demand deposits with banks, classified by domestic institutional sectors.

Demand deposits are the sum of other domestic sectors', other

banking institutions' and non-banking financial institutions' giro and current accounts balances, minus currency in the payment system (i.e. amount of checks in banks' vaults and checks in collection). Banks' obligations arising from kuna payment instruments issued are included in the household sector.

Table D9: Bonds and Money Market Instruments

The table shows banks' liabilities for securities issued (net) and loans received from other domestic sectors, other banking institutions and non-banking financial institutions.

Money market instruments (net) comprise banks' net liabilities for CNB bills, bills of exchange (issued and accepted) and other secu-

rities issued.

Bonds (net) comprise banks' net liabilities for kuna and foreign currency bonds issued, as well as issued subordinated and hybrid instruments, excluding those purchased by foreign investors.

Other domestic borrowing comprises loans received, reported total and classified by institutional sectors.

Table D10: Banks' Foreign Liabilities

The table shows banks' total foreign currency and kuna liabilities to foreign legal and natural persons, with the exception of restricted kuna and foreign currency deposits by foreign legal and natural persons.

Banks' foreign liabilities comprise foreign currency liabilities and

foreign kuna liabilities.

Within foreign kuna and foreign currency liabilities, liabilities to foreign banks are reported separately from liabilities to foreign non-banks (total and by financial instruments). Loans and advances also include issued subordinated and hybrid instruments purchased by foreign investors.

Table D11: Central Government and Funds' Deposits with Banks

The table reports total banks' kuna and foreign currency liabilities to the central government and funds, with the exception of restricted (kuna and foreign currency) deposits by the central government and funds with banks.

Kuna and foreign currency deposits by the Republic of Croatia and central government funds are shown separately. Kuna deposits comprise demand deposits, savings deposits, time and notice deposits, and loans obtained from the central government and funds. Foreign currency deposits comprise savings deposits, time and notice deposits, and refinanced loans.

Table D12: Restricted and Blocked Deposits with Banks

The table shows households' restricted deposits (kuna and foreign currency) and blocked deposits.

Restricted and blocked deposits include two categories of deposits: restricted (kuna and foreign currency) deposits and blocked for-

foreign currency deposits.

Blocked foreign currency deposits include households' foreign currency deposits regulated by the Act on Converting Households' Foreign Exchange Deposits into the Public Debt of the Republic of Croatia.

Table E1: Housing Savings Banks' Accounts

Housing savings banks' accounts include data on claims and liabilities of the Croatian housing savings banks. All housing savings banks' claims and liabilities refer exclusively to domestic sectors.

Housing savings banks' required reserves held at the central bank include funds in vaults. Until September 2003, they also included kuna funds held in accounts at the central bank.

Claims on central government and funds are claims in kuna on the Republic of Croatia and central government funds.

Claims on other domestic sectors include kuna loans to local government and households.

Claims on banks include loans extended to banks, as well as deposits with banks, including, since October 2003, accounts for regu-

lar operations with banks.

Claims on other banking institutions include investments in investment funds.

Item Time deposits includes local government and households' time deposits.

Bonds and money market instruments are housing savings banks' liabilities for securities issued (net) and loans obtained.

Capital accounts are share capital, profit or loss for the previous and current year, retained earnings (loss), legal reserves, reserves provided for by the articles of association and other capital reserves, hedging reserves, unrealised gains (losses) from financial assets classified as available-for-sale assets, value adjustments and specific reserves for unidentified losses. Other items (net) are unclassified liabilities decreased by unclassified assets.

^a Weighted averages of weighted repo rates achieved at regular reverse repo auctions of the CNB in the reporting month.

^b Breaks in the series of data are explained in notes on methodology.

^c Since 14 December 2005.

Table F1: Credit Rates of the Croatian National Bank

The table shows interest rates used by the CNB to calculate and charge interest on credits from the primary issue and on all other claims.

Credit rates of the CNB are set by decisions of the Council of the Croatian National Bank, on annual basis. Exceptionally, from June 1995 interest rate charged by the CNB on Lombard credits was 1.5 percentage point higher than the weighted average interest rate on CNB bills on a voluntary basis (which serve as collateral for Lombard credits) in cases when the weighted average interest rate was higher than 16.5%. Congruently, from June 1995 to August 1996 the table reports the weighted average interest rate on Lombard credits.

Data shown in column 4 refer to weighted interest rates of weighted repo rates achieved at regular reverse repo auctions of the CNB in the reporting month.

Time series presented in the table contain certain breaks, due to changes in the CNB's monetary policy instruments.

Data shown in column 7 refer, until September 1994, to interest rates on special credits for savings deposits' payments and for pay-

ments from households' current accounts, and from October 1994 until September 1997 to interest rates on daily credits for savings deposits and households' current accounts in kuna. Daily credits, as opposed to special credits, are paid back on the same day. In October 1997, this instrument was replaced by daily credits for overcoming short-term liquidity problems that are collateralized by CNB bills. Since December 1998 until April 1999, this credit is incorporated in Lombard credit, applying different interest rate for its usage within one day.

Data shown in column 8 refer, until December 1994, to interest rate on initial credits, and since 18 March 1998, to credits for overcoming liquidity problems of banks under evaluation for entry into rehabilitation and restructuring procedures and since February 1999, to interest rates on short-term liquidity credits. Since December 1999, data show interest rates on short-term liquidity credit with a maturity over 3 months which is 1 percentage point higher than interest rate on Lombard credits. Interest rate on short-term liquidity credit up to 3 months is 0.5 percentage point higher than interest rate on Lombard credits.

^a Breaks in the series of data are explained in notes on methodology.

Table F2: Deposit Rates of the Croatian National Bank

The table shows interest rates used by the CNB to calculate and pay interest on funds deposited with the CNB and on issued securities.

Interest rates paid by the CNB for appropriated statutory reserve funds are set by a decision of the Council of the CNB. Until April 2005, the appropriated statutory reserve funds included the calculated statutory reserve funds that were deposit in a special statutory reserve account with the CNB, or maintained (in average) in bank's settlement accounts, or deposited in a special account with the CNB for the settlement of net positions in the NCS. From April 2005, they include the calculated statutory reserve funds allocated to a special statutory reserve account with the CNB (column 3).

Interest rates on CNB bills on an obligatory basis are set by a decision of the Council of the CNB. Interest rates on CNB bills on a voluntary basis are set at CNB bills' auction sales. Congruently, columns 5, 6 and 7 report weighted average interest rates attained at auctions of CNB bills.

From November 1994 through January 2001, columns 7 and 8 report interest rates on CNB bills on a voluntary basis due in 91 and 182 days respectively.

Since April 1998 columns 9 through 13 report weighted average interest rates on CNB bills on a voluntary basis in EUR and USD (until December 1998 in DEM and USD) attained at CNB bills' auctions as a weighted average of subscribed amounts in those two currencies.

Column 14 reports the interest rate on overnight deposits with the CNB.

Table F3: Banks' Reserve Requirements

This table shows data on monthly averages of day-to-day balances of banks' kuna and foreign currency reserve requirements with the CNB. Savings banks are included beginning in July 1999.

Column 3 shows the weighted average reserve requirement ratio as a percentage of the kuna and foreign currency reserve requirement in the reserve base.

Reserve requirement (column 4) represents the prescribed amount of funds banks are required to deposit in a special statutory reserve account with the CNB, or to maintain (in average) in their settlement accounts and in vaults, or in accounts of liquid foreign exchange claims (which include foreign currency cash and checks in foreign exchange, liquid foreign exchange claims maintained in the accounts with the high-grade foreign banks and foreign currency CNB bills).

Column 5 shows the amount of kuna reserve requirements. Between January 1995 and December 2000, this amount corresponded with the statutory reserve requirement instrument, while until December 1994 it comprised two instruments: statutory reserves and liquid assets requirement – LAR (except for the part in which banks were conforming to this requirement by registering CNB bills on a voluntary basis). In December 2000, reserve requirements in kuna and in foreign currency were unified, i.e. reserve requirements rate, periods for calculating, allocating and maintaining reserve requirements were unified, as well as a minimum percentage of the total reserve requirements deposited with the Croatian National Bank. Starting from September 2001, column 5 includes also the f/c component of reserve requirements that is set aside/maintained in kuna.

Column 6 shows the amount of foreign currency reserve requirements, i.e. the prescribed amount of funds banks are required to de-

posit in the CNB's foreign exchange accounts, or to maintain (in average) in accounts of liquid claims. Until November 2000, the calculation base consisted of average daily balances of household foreign exchange savings deposits with a remaining maturity of up to 3 months, while starting from December 2000 the base consists of foreign exchange sources of funds, including: ordinary foreign exchange accounts, special foreign exchange accounts, sight foreign exchange accounts and savings deposits, received foreign exchange deposits and received foreign exchange loans, as well as obligations arising from securities issued in foreign exchange (excluding the bank's equity securities). Starting from November 2001, the base includes also hybrid and subordinated instruments.

Column 7 shows the total amount of other obligatory deposits with the CNB, including CNB bills on an obligatory basis, those CNB bills on a voluntary basis used by banks to maintain the prescribed minimal liquidity (LAR), special statutory reserves until July 1995, special reserve requirement on liabilities arising from issued securities from March 2006, statutory reserves on f/c deposits, f/c credits from foreign banks and guarantees for such credits and marginal reserve requirement (from August 2004).

Column 8 shows the portion of the kuna reserve requirement which banks deposit in a statutory reserve account with the CNB (until December 1994 this amount corresponded with the statutory reserve instrument, while since January 1995 a minimum percentage of the total reserve requirement banks are required to deposit in a special statutory reserve account with the CNB has been prescribed). In April 2005, this percentage was set at 70%.

Column 9 shows the portion of the foreign currency reserve requirement which banks deposit in the CNB's foreign exchange accounts. The percentage for allocating the foreign currency component of reserve requirements calculated on the basis of foreign ex-

change funds of non-residents and foreign exchange funds received from legal persons in a special relationship with a bank amounts to 100%, while the percentage for allocating the remaining portion of the foreign currency component of reserve requirements amounts to 60%.

Column 10 shows the weighted average remuneration rate on all forms of immobilized kuna funds which include reserve requirements and other obligatory deposits with the CNB.

Column 11 shows the weighted average remuneration rate on allocated funds in foreign currency, including the marginal reserve requirement funds (from August 2004 on). From June 2005 the CNB pays remuneration equalling 50% of the US Federal Funds Target Rate for the funds allocated in US dollars and 50% of the ECB Minimum Bid Refinance Rate for the funds allocated in euros. In both cases the rate in effect on the day of allocation is applied.

Table F4: Banks' Liquidity Indicators

The table reports monthly averages of day-to-day balances of some indicators of banks' liquidity. Savings banks are included beginning in July 1999.

Column 3 shows free reserves in kuna, defined as bank's total reserves (in settlement accounts and in vaults) decreased by the minimal average settlement account and vault balance, as prescribed by instruments of the CNB.

Column 4 shows free reserves in foreign currency, defined as funds for the maintenance of foreign currency reserve requirements (foreign currency cash and checks in foreign exchange, liquid foreign exchange claims maintained in the accounts with the high-grade foreign banks and foreign currency CNB bills) decreased by the minimal required balance of these funds in the same period.

Column 5 shows the primary liquidity ratio as a percentage of monthly day-to-day kuna free reserves averages (column 3) in monthly day-to-day averages of deposits which constitute the reserve base.

Column 6 shows the monthly average of day-to-day balances of secondary liquidity sources used. Secondary liquidity sources comprise: Lombard credits (since December 1994), short-term liquidity credits (since February 1999), and overdue liabilities to the CNB.

Column 7 reports the monthly average of day-to-day balances of kuna CNB bills on a voluntary basis (until December 1994, this amount is decreased by the portion of voluntarily registered CNB bills used by banks to maintain the prescribed minimal liquidity).

Column 8 reports the monthly average of day-to-day balances of foreign currency CNB bills on a voluntary basis (EUR and USD).

Column 9 reports the monthly average of day-to-day balances of kuna MoF treasury bills. Until September 2002, it shows the discounted value of treasury bills, while starting from October 2002, it shows their nominal value.

	May	3.84	4.27	9.21	9.52	6.74	12.23	13.16	5.55	7.96	6.54	8.79	
Relative significance ^a		–	–	82.82	66.39	32.82	33.57	29.48	4.09	16.42	6.08	10.34	

^a Relative significance is calculated as a percentage of corresponding credit category in total credits disbursed in the reporting month (according to data for the last period included in the table).

Note: A break in the time series occurred due to changes in the methodology used in interest rate statistics as of 1 January 2001. This especially refers to interest rates shown in columns 5, 6 and 7. Interbank credits, which bear relatively low interest rates, were, among others, excluded from short-term credits to enterprises. The increase in interest rates was also caused by the weighting method: all categories are weighted by the amounts of newly-granted credits, except credit lines whose relative share grew in the new coverage, which are weighted by book balances.

Table G1: Banks' Interest Rates on Kuna Credits Not Indexed to Foreign Currency

The table contains weighted averages of banks' and savings banks' monthly interest rates on kuna credits not indexed to f/c, reported on a yearly basis.

Up to December 2001, data refer to weighted averages of banks' monthly interest rates on kuna credits not indexed to f/c granted to legal persons (which included enterprises, the public sector, financial institutions, non-profit institutions and non-residents) and households, reported on a yearly basis. Savings banks are not covered.

Starting from January 2002, data refer to weighted averages of banks' and savings banks' monthly interest rates on kuna credits not indexed to f/c granted only to enterprises (public and other) and households, reported on a yearly basis.

Up to February 1996, columns 3 and 4 showed interest rates on the interbank money market, according to information published by the Zagreb Money Market (ZMM). Starting from March 1996, interest rates on the money market are calculated as weighted monthly averages of weighted daily interest rates and shown separately for trad-

ing in overnight credits and trading in other credits on the ZMM. In the period between May 1998 and January 2001, the repayment of credits granted on the interbank overnight market was guaranteed by banks' required reserves with the CNB. Columns 5 through 13 show weighted averages of banks' and savings banks' monthly interest rates classified by maturity and sectors. Interest rates on short-term credits to enterprises also include interest rates on callable loans.

Data on banks' and savings banks' interest rates on kuna credits not indexed to f/c are based on banks' and savings banks' periodic reports. The basis for calculation of weighted averages are amounts of credits bearing corresponding interest rates, which were disbursed during the reporting month, with the exception of interest rates on giro and current account credit lines, for which weighted averages were calculated based on the balance of these loans at the end of the reporting month.

Relative significance of particular interest rates (reported in the last line of the table) refers to data for the last period included in the table. It is calculated as a percentage of the corresponding credit category (to which exchange rates apply) in total credits included in the calculation of weighted averages for that period.

Table G2: Banks' Interest Rates on Kuna Credits Indexed to Foreign Currency and on Credits in Euros

weighted averages of monthly interest rates, in % on annual basis

^a Relative significance is calculated as a percentage of corresponding credit category in total credits disbursed in the reporting month (according to data for the last period included in the table).

Table G2: Banks' Interest Rates on Kuna Credits Indexed to Foreign Currency and on Credits in Euros

The table contains weighted averages of banks' and savings banks' monthly interest rates on kuna credits indexed to f/c and on credits in euros, reported on a yearly basis.

Up to December 2001, data refer to weighted averages of banks' monthly interest rates on kuna credits indexed to f/c and on credits in euros (or German marks) granted to legal persons (which included enterprises, the public sector, financial institutions, non-profit institutions and non-residents) and households, reported on a yearly basis. Savings banks are not covered.

Starting from January 2002, data refer to weighted averages of banks' and savings banks' monthly interest rates on kuna credits indexed to f/c and on credits in euros granted only to enterprises (public and other) and households, reported on a yearly basis.

Data on banks' and savings banks' interest rates on kuna credits indexed to f/c and on credits in euros are based on banks' and savings

banks' periodic reports. The basis for calculation of weighted averages are amounts of credits bearing corresponding interest rates, which were disbursed during the reporting month.

Columns 3 through 11 show weighted averages of banks' and savings banks' monthly interest rates classified by maturity and sectors. Interest rates on short-term credits to enterprises also include interest rates on callable loans.

Up to December 2001, interest rates on credits in euros (columns 12, 13 and 14) refer to credits released in German marks in the reporting month, and starting from January 2002, they refer to credits released in euros, while weighted averages are calculated based on their kuna equivalent using current exchange rate. Credits released in other currencies are not included in this table.

Relative significance of particular interest rates (reported in the last line of the table) refers to data for the last period included in the table. It is calculated as a percentage of the corresponding credit category (to which exchange rates apply) in total credits included in the calculation of weighted averages for that period.

Table G3: Banks' Interest Rates on Kuna Deposits Not Indexed to Foreign Currency

weighted averages of monthly interest rates, in % on annual basis

^a Relative significance is calculated as a percentage of corresponding deposit category in total deposits received in the reporting month (according to data for the last period included in the table).

Table G3: Banks' Interest Rates on Kuna Deposits Not Indexed to Foreign Currency

The table contains weighted averages of banks' and savings banks' monthly interest rates on kuna deposits not indexed to f/c, reported on a yearly basis.

Up to December 2001, data refer to weighted averages of banks' monthly interest rates on kuna deposits not indexed to f/c received from legal persons (which included enterprises, the public sector, financial institutions, non-profit institutions and non-residents) and households, reported on a yearly basis. Savings banks are not covered.

Starting from January 2002, data refer to weighted averages of banks' and savings banks' monthly interest rates on kuna deposits not indexed to f/c received from enterprises (public and other) and households, reported on a yearly basis.

Data on banks' and savings banks' interest rates on kuna deposits not indexed to f/c are based on banks' and savings banks' periodic reports.

Column 3 reports weighted averages of monthly interest rates on total kuna deposits (giro and current accounts, household savings deposits and time deposits) not indexed to f/c. Column 4 shows

weighted averages of monthly interest rates on deposits in giro and current accounts not indexed to f/c received from enterprises (until December 2001, all legal persons) and households, and column 5 shows weighted averages of monthly interest rates on total time deposits not indexed to f/c.

The basis for calculation of weighted averages for kuna time deposits not indexed to f/c are the amounts of those deposits received during the reporting month. The basis for calculation of weighted averages for deposits in giro and current accounts are the end-of-month book balances of those deposits. Weighted averages of interest rates on total kuna deposits not indexed to f/c (column 3) are weighted by the end-of-month balances of all categories included in the calculation.

Kuna and foreign currency deposits used as collateral for credit are included, while restricted deposits (deposits used for payment of imports and other restricted deposits) are not included into the calculation of weighted averages.

Relative significance of particular interest rates (reported in the last line of the table) refers to data for the last period included in the table. It is calculated as a percentage of the corresponding deposit category (to which exchange rates apply) in total deposits included in the calculation of weighted averages for that period.

	March	4.15	3.52	4.46	3.04	0.25	0.23	0.16	0.33	0.45	
	April	3.85	3.54	4.37	3.13	0.25	0.23	0.16	0.35	0.43	
	May	3.71 ^b	3.58	4.51	3.11	0.25	0.24	0.17	0.36	0.40	
Relative significance ^a		1.16	0.92	0.22	43.23	23.97	16.97	2.34	4.08	0.58	

^a Relative significance is calculated as a percentage of corresponding deposit category in total deposits received in the reporting month (according to data for the last period included in the table).

^b Of the total amount of deposits to which this interest rate refers, 19.86 percent refers to enterprises.

Table G4a and b: Banks' Interest Rates on Kuna Deposits Indexed to Foreign Currency and on Foreign Currency Deposits

The table contains weighted averages of banks' and savings banks' monthly interest rates on kuna deposits indexed to f/c and on foreign currency deposits, reported on a yearly basis.

Up to December 2001, data refer to weighted averages of banks' monthly interest rates on kuna deposits indexed to f/c and on foreign currency deposits received from legal persons (which included enterprises, the public sector, financial institutions, non-profit institutions and non-residents) and households, reported on a yearly basis. Savings banks are not covered.

Starting from January 2002, data refer to weighted averages of banks' and savings banks' monthly interest rates on kuna deposits indexed to f/c and on foreign currency deposits received from enterprises (public and other) and households, reported on a yearly basis.

Data on banks' and savings banks' interest rates on kuna deposits indexed to f/c and on foreign currency deposits are based on banks' and savings banks' periodic reports.

Column 3 reports weighted averages of monthly interest rates on total kuna savings and time deposits indexed to f/c received from enterprises (until December 2001, all legal persons) and households, whereas weighted averages of monthly interest rates on time deposits are shown in columns 4 (short-term deposits) and 5 (long-term deposits) respectively.

Up to December 2001, interest rates on foreign currency deposits refer to deposits received in German marks or US dollars, and start-

ing from January 2002, they refer to deposits received in euros and US dollars, while weighted averages are calculated based on their kuna equivalent using current exchange rate. Deposits received in other currencies are not included in this table.

The basis for calculation of weighted averages for kuna time deposits indexed to f/c and foreign currency time deposits are the amounts of those deposits received during the reporting month. The basis for calculation of weighted averages for savings deposits indexed to f/c are the end-of-month book balances of those deposits. Starting from January 2002, weighted averages of interest rates on total kuna deposits indexed to f/c (column 3) are weighted by the end-of-month balances of all categories included in the calculation.

The average interest rate on total foreign currency deposits (column 6) refers to the weighted average of monthly interest rates on savings and time deposits, which are weighted by the end-of-month balances of all categories included in the calculation.

The basis for calculation of weighted averages of monthly interest rates on total foreign currency savings deposits (column 7) are the end-of-month balances of those deposits.

The basis for calculation of weighted averages of monthly interest rates on total foreign currency time deposits (column 12) are the amounts of those deposits received during the reporting month. The same basis is applied in calculating weighted averages of monthly interest rates on total short-term foreign currency deposits (column 13) and on total long-term foreign currency deposits (column 18).

Relative significance of particular interest rates (reported in the

^a Preliminary data.

Note: In the period from January 1994 to September 2001 all foreign exchange sale and purchase transactions in banks' reports delivered to the CNB were recorded based on realised sale/purchase transaction regardless of the contracted term for realisation and were as such transferred into the Table on Banks' Trade with Foreign Exchange. As of the of change in the reporting scope dated 1 October 2001 reports contain data on contracted sale and purchase of foreign exchange broken down by spot, forward and swap transactions. Based on the aforesaid the data for 2002, 2003 and 2004 have been revised so as to include only the data on contracted spot transactions with banks no longer included into the "legal persons" category.

Table G5: Banks' Trade with Foreign Exchange

Data on trade with foreign exchange between banks comprise spot transactions of the purchase and sale of foreign exchange in domestic foreign currency market. Spot transactions are contracted obligations to buy/sell foreign currency within maximally 48 hours. The

transactions are classified by category of participants (legal and natural persons, domestic and foreign banks and the CNB). Sources of data are banks' reports on trading with foreign exchange and statistical data on foreign payment operations.

Other Croatian National Bank transactions include foreign exchange sales and purchases on behalf of the Ministry of Finance.

^a Preliminary data.

Note: The item net errors and omissions also comprises the counter entry of a part of revenues from travel services which relates to such revenues not stated in the banks' records.

Table H1-H6: Balance of Payments

The balance of payments of the Republic of Croatia represents a systematic overview of the value of economic transactions performed by the Croatian residents with foreign countries within a particular period. It is compiled in accordance with the recommendations of the International Monetary Fund (Balance of Payments Manual, Fifth Edition, 1993). Data sources include: 1. reports of the government institutions (Central Bureau of Statistics and Croatian Institute for Health Insurance), 2. special reports of the Croatian National Bank (International Transaction Reporting System (ITRS), external debt relations, monetary statistics and reserve assets) and 3. estimates and statistical research carried out by the Croatian National Bank.

Balance of payments of the Republic of Croatia data are reported in three currencies: in euros (EUR), US dollars (USD) and domestic currency (HRK). In all cases, the same data sources are used and the same principles regarding the scope of transactions and the procedures for compiling particular items are applied. Since the original data are reported in different currencies, the transaction values are converted from the original currency into the reporting currency by applying the exchange rate from the CNB exchange rate list in one of the following manners:

- by applying the midpoint exchange rate on the date of the transaction;
- by applying the average monthly or quarterly midpoint exchange rate in the case the transaction date is not available;

- by applying the end-of-period exchange rate for the calculation of a change in the transaction value between the two periods; the end-of-period balances reported in the original currency serve as a basis for calculating the change in the original currency value, which is converted, by applying the average midpoint exchange rate in the observed period, into the value of change in the reporting currency.

The Report of the Central Bureau of Statistics on merchandise foreign trade of the Republic of Croatia represents the basic data source for the balance of payments items related to exports and imports. These data are adjusted, in accordance with the recommended compilation method, for coverage and classification. Accordingly, goods exports and imports in the balance of payments are reported at f.o.b. parity. The value of exports at this parity is already contained in the previously mentioned CBS Report, whereas the value of imports f.o.b. is estimated on the basis of research studies of the CNB on the stratified sample of importers. The resulting value serves as a basis for the estimate of the share of transportation and insurance services by which the original value of imports c.i.f., stated in the CBS Report, is reduced. In the 1993-2001 period, this share stood at 7.10% (estimated only on the basis of the largest and large exporters), while from 2002 on it has amounted to 3.73%. In the period from 1993 to 1996, the value of imports was modified by estimates of imports in duty free zones, which have been included in the merchandise trade statistics since 1997. Starting from 1996, goods exports and imports have been modified by the data on repairs on goods and goods procured in

^a Preliminary data.

ports by carriers. In addition, since 1999, based on the Survey on Consumption of Foreign Travellers in Croatia and Domestic Travellers Abroad, the item of goods exports has been modified by the estimated value of goods sold to foreign travellers and tourists and taken out of the Republic of Croatia. The item of goods imports is adjusted for the estimated value of goods imported personally by the Croatian citizens from the neighbouring countries (shopping expenditures).

Transportation, travel and other services are reported separately under service account. Income and expenditures on the basis of transportation, in the 1993-1998 period, were adopted from the ITRS. Starting from 1999, income and expenditures arising from transportation of goods and passengers, as well as the value of accompanying services, which together constitute the total value of these services, have been compiled on the basis of the results of the Research on transactions related to international transportation services, carried out by the CNB. Owing to an exceptionally large population of road carriers, income and expenditures on the basis of road transportation are not adopted from this research. They are compiled by using ITRS data. As regards transportation of goods, expenditures are supplemented by a portion of transportation and insurance costs related to imports of goods which belongs to non-residents and which is estimated by adjusting the value of imports at c.i.f. parity to the value of imports f.o.b.

Income from services rendered to foreign travellers and tourists, as well as expenditures incurred by domestic travellers and tourists abroad are shown under the position Travel. In the 1993-1998 period, this position was assessed by using various data sources which did not provide for a full coverage in accordance with the recommended methodology. Accordingly, in the second half of 1998, the Croatian National Bank started to carry out the Survey on Consumption of Foreign Travellers in Croatia and Domestic Travellers Abroad and use its results for compiling the Travel position. Since early 1999, the results of this Survey, based on carrying out a survey of travellers (stratified sample) at border crossings, have been combined with the Ministry of the Interior data on total number of foreign and domestic travellers, along with the data on distribution of foreign travellers by

countries contained in the CBS Report on tourism, in order to assess the corresponding balance of payment items.

Other services position is compiled by using different data sources: apart from income and expenditures related to insurance and communication services, which have been determined by the CNB special statistical research since 2001, the values of all other services are adopted from the ITRS.

Transactions in the income account are classified into four main groups. Compensation of employees item is compiled on the basis of the ITRS. Income from direct investment, portfolio investment and other investment are reported separately. Data on reinvested earnings are reported separately, under direct investment income, calculated on the basis of the CNB Research on direct and other equity investment. In contrast to data on dividends, these data are not available for the 1993-1996 period, since at that time they were not reported separately. On the basis of statistical data on external debt relations, starting from 1997, income from direct investment includes data on interest arising from credit relations between residents and non-residents directly related through ownership. Income from equity portfolio investment is compiled on the basis of the same research, whereas data on debt portfolio investment income have been compiled since 1999, based on income reported in statistics on foreign credit relations, which also encompass payments related to debt securities owned by non-residents. Income from other investments includes all payments and collections of interest in accordance with the foreign credit relations statistics.

Current transfers are reported separately for the general government sector and other sectors. The ITRS is used as the main data source on current transfers for both sectors. In addition to taxes and excise duties, pensions, monetary support and donations, which are included in current transfers of both sectors, the government sector also encompasses data on multilateral co-operation, whereas other sectors include data on workers' remittances. Current transfers of the general government sector also include data on exports and imports of goods without a payment obligation, provided by the CBS. In the 1993-1998 period, current transfers of other sectors also encom-

^a Preliminary data.

passed an estimate of unregistered foreign currency remittances, which accounted for 15% of the positive difference between unclassified inflows and outflows of the household sector. From 1993 to the second quarter of 1996, the CNB also assessed a portion of the outflow based on current transfers. Since 2002, inflows and outflows based on current transfers of other sectors are supplemented by the data of the CNB special statistical research on international transactions related to insurance services.

Capital account is compiled on the basis of the ITRS, particularly on their part related to transfers of migrants. In addition, capital account includes transfers that cannot be classified into current transfers, such as allocation of gold of the former SFRY or investments in patents and rights.

Foreign direct investments include equity capital, reinvested earnings and debt relations between ownership-related residents and non-residents. Direct investments are investments whereby a foreign owner acquires a minimum of 10% interest in equity capital of a company, regardless of whether a resident invests abroad or a non-resident invests in Croatian residents. The CNB Research on foreign direct investments started in 1997 when companies included in the survey also delivered data on direct investments for the 1993-1996 period. For the same period, no data are available on reinvested earnings and other capital under direct investment position, where all debt relations between related residents and non-residents are classified (excluding the banking sector). Such data actually became available only after the stated research has been launched. Since 1999 data on debt relations within direct investments have been collected on the basis of external debt relations statistics.

Data on equity portfolio investments are collected from the same data source as the data on direct investments. Debt portfolio investments include all investments in short-term and long-term debt securities that cannot be classified under direct investments. In the 1997-1998 period, these data were collected through the CNB Research on direct and portfolio investments, and since 1999 data on external debt relations and monetary statistics data for bank investment have been used. Starting from 2002 and 2004, this position has

also been compiled for investment funds and pension funds, respectively.

Other investment encompasses all other debt investments that have not been mentioned, apart from investment constituting reserve assets. Other investments are classified by instruments, maturity and sectors. Trade credits, in the 1996–2002 period, included the CNB estimates of advance payment and deferred payments, made on the basis of the sample of the largest and large importers and exporters. Data on advance payments have been estimated since 1996, while data on short-term deferred payments (first up to 90 days, then up to 150 days, and today from 8 days to 1 year) have been collected since 1999. In 2003 this research was replaced by a new one, where the selected companies, regardless of their size (stratified sample), are obliged to submit data. Data on deferred payments with the original maturity of more than one year are adopted from the CNB foreign credit relations statistics. Credits granted by residents to non-residents, i.e. foreign loans utilised by residents and granted by non-residents, which cannot be classified into direct investments or trade credits, are classified by the institutional sector and maturity under the corresponding positions of other investment. The CNB foreign credit relations statistics represent the data source for these positions. Currency and deposit position shows residents' claims on foreign countries for foreign cash and deposits with foreign banks, as well as obligations of the Croatian banks for deposits owned by non-residents. Monetary statistics represent a data source for the general government sector and banks sector. Data on balance and currency structure of foreign assets and liabilities, contained in monetary statistics, are used to assess transactions from which the exchange rate effect was eliminated. In the 1993-1998 period, data on other sectors' claims under this position were compiled on the basis of the CNB estimate of a portion of net foreign currency inflows of the household sector which is not classified under current transfers. Since 1999 this position has included only the data based on the Bank for International Settlement quarterly data, while data in the fourth quarter of 2001 and in the first two quarters of 2002 relate to the effect of the EMU countries' currencies changeover to the euro.

^a Preliminary data.

In the period from 1993 to 1998, the estimate of reserve assets transactions was made by converting the changes in the original currencies into the US dollars by applying the average monthly exchange

rate of the currencies contained in the reserves. Since 1999 the changes in reserve assets balance have been calculated on the basis of the CNB accounting data.

^a International reserves of the Republic of Croatia consist only of the Croatian National Bank's foreign exchange reserves.

^b Preliminary data.

Table H7: International Reserves and Banks' Foreign Exchange Reserves

The international reserves of the Croatian National Bank are shown according to the methodology contained in the Balance of Payments Manual (International Monetary Fund, 1995), and include those foreign claims of the Croatian National Bank that can be used to bridge imbalances in international payments. International reserves

include special drawing rights, reserve position in the International Monetary Fund, gold, foreign currency and deposits with foreign banks, as well as bonds and debt instruments.

The foreign exchange reserves of banks include foreign currency and domestic banks' deposits with foreign banks. These foreign exchange reserves represent an additional source of liquidity for bridging imbalances in international payments.

^a Until January 2001: Currency structure of official reserve assets and other foreign currency assets. ^b In accordance with the recommendation made by the IMF, time deposits with a maturity over 3 months were also included in Official reserve assets (I.A.). These deposits were previously included in Other foreign currency assets (I.B.).

Table H8: International Reserves and Foreign Currency Liquidity

International reserves and foreign currency liquidity are shown in accordance with a Template on international reserves and foreign currency liquidity, drawn up by the IMF. A detailed explanation of the Template is given in “International Reserves and Foreign Currency Liquidity – Guidelines for a Data Template, 2001”.

The first part of the Template shows total assets of the Croatian National Bank in convertible foreign currency. Official reserve assets (I.A.) show those types of assets that are readily available to the CNB at any moment for bridging imbalances in international payments. Official international reserves include: short-term foreign negotiable debt securities, foreign cash, foreign currency sight deposits, foreign currency time deposits which can be withdrawn before maturity, foreign currency time deposits with a remaining maturity of up to 1 year, reserve position with the IMF, special drawing rights, gold, and reverse repos with foreign negotiable debt securities.

The second part of the Template shows fixed predetermined foreign currency net liabilities of the Croatian National Bank and the central government (excluding central government funds) that fall due in the next 12 months. Foreign currency loans, securities and deposits (II.1.) include future interest payments on banks' foreign currency reserve requirements with the CNB (only interest payments for the next month are included), payments of future maturities of foreign currency CNB bills, future principal and interest payments on loans from the IMF, and future principal and interest payments on the central government's foreign currency debts (excluding central government funds). Aggregate short and long positions in forwards and futures in foreign currencies (II.2.) include future collections (+) or payments (-) arising from currency swaps between the CNB and domestic banks (temporary sale or purchase of foreign currency). Item Other (II.3.) includes future payments arising from repo agreements

with foreign negotiable debt securities.

The third part of the Template shows predetermined contingent foreign currency net liabilities of the Croatian National Bank and the central government (excluding central government funds), which fall due in the following 12 months. Contingent liabilities in foreign currency (III.1.) include future principal and interest payments on foreign loans guaranteed by the central government, and banks' foreign currency reserve requirements. (The inclusion of reserve requirements in foreign currency is based on the assumption that there will be no changes in ratios or in the base of foreign currency reserve requirements, which comprises foreign exchange sources of funds, including ordinary foreign exchange accounts, special foreign exchange accounts, sight foreign exchange accounts and savings deposits, received foreign exchange deposits and received foreign exchange loans, as well as obligations arising from securities issued in foreign exchange (excluding the bank's equity securities) and hybrid and subordinated instruments). Undrawn credit lines show potential inflows (+) or outflows (-) which would arise from drawdowns under these credits.

The fourth part of the Template lists memo items. Short-term, domestic currency debt indexed to foreign currency (IV.a) shows obligations arising from the Act on Converting Households' Foreign Exchange Deposits into the Public Debt of the Republic of Croatia, which fall due in the next 12 months. Pledged assets (IV.c) show time deposits in foreign currency with a maturity over 3 months listed in item I.B. which are also a pledge. Repo transactions with securities show the value of collateral that is the subject of repo agreements and reverse repo transactions with securities as well as how these transactions are registered in the Template. Until December 2000, the currency structure of international and other foreign currency reserves showed the currency structure of the total foreign currency assets of the CNB (section I.). From January 2001, the currency structure refers to official reserve assets (section I.A.).

Table H9: Midpoint Exchange Rates of the Croatian National Bank (period average)

The annual averages of CNB midpoint exchange rates are calculated based on the midpoint exchange rates effective on the working days in a year, using CNB exchange rate lists whose application dates pertain to the calculation period.

The monthly averages of CNB midpoint exchange rates are calculated based on the midpoint exchange rates effective on the working days in a month, using CNB exchange rate lists whose application dates pertain to the calculation period.

The data show the annual and monthly averages of CNB midpoint exchange rates for selected currencies from 1992 to date, in kuna terms. The averages related to the calculation periods from the beginning of 1992, when the legal tender in the Republic of Croatia was the Croatian dinar, until the introduction of the kuna on 30 May 1994, are shown in kuna equivalent, and are denominated by dividing their values by one thousand (1,000).

The annual and monthly averages of midpoint exchange rates for the euro from 1992 until end 1998 are the averages of midpoint exchange rates applied for the ECU.

Table H10: Midpoint Exchange Rates of the Croatian National Bank (end of period)

The table shows CNB midpoint exchange rates applied on the last day of the observed period.

The data show CNB midpoint exchange rates for selected currencies from 1992 to date, in kuna terms. The end of period midpoint ex-

change rates related to the periods from the beginning of the time series in 1992 until the introduction of the kuna on 30 May 1994 are shown in kuna equivalent and are denominated by dividing their values by one thousand (1,000).

The midpoint exchange rates for the euro applied on the last days of the observed periods from 1992 until end 1998 are the end of period midpoint exchange rates applied for the ECU.

	June	87.75		

^a Preliminary data.

Note: From 1 January 2001, the euro-zone related price series includes Greece as well. Slovenia became an EMU member on 1 January 2007. Accordingly, the weight assigned to the Slovenian tolar (0.2%) has been added to the euro weight (70.6%), which now amounts to 70.8%. The weights assigned to the US dollar, pound sterling and Swiss franc have been kept at 27.2%, 1.0% and 1.0% respectively.

Table H11: Indices of the Effective Exchange Rate of the Kuna

The index of the nominal effective exchange rate of the kuna is a weighted geometric average of the index of bilateral nominal exchange rates of the kuna against the euro, US dollar, Swiss franc, pound sterling and Slovenian tolar. The series of the indices of the effective exchange rate of the kuna, calculated in accordance with the modified CNB methodology for calculating the nominal and real effective kuna exchange rate (for the basic CNB methodology, see Bulletin No. 64, Box: 2, October 2001), were first published in the CNB Bulletin No. 94 (June 2004). The weights are determined based on the average share of a particular foreign currency in the structure of the current account – ITRS data between January 2000 and December 2003 (between July 1996 and January 2000 in the previous version of notes on methodology under Table H10). The new weights have been assigned to the euro (70.6%), US dollar (27.2%), Swiss franc (1.0%) and pound sterling (1.0%) and thus replaced the old weights: euro (66.2%), US dollar (30.7%), Swiss franc (1.6%) and pound sterling (1.2%). The weight assigned to the Slovenian tolar remained unchanged at 0.2%. The year 2001 is a base period for calcu-

lating the indices of the effective exchange rate of the kuna (1995 in the previous version of notes on methodology under Table H10). The index of the nominal effective exchange rate is an aggregate indicator of the average value of the domestic currency against a basket of currencies. An increase in the index of the nominal effective exchange rate of the kuna in a certain period indicates that the kuna has depreciated against the basket of currencies, and vice versa. The index of the real effective exchange rate is a weighted geometric average of the index of bilateral exchange rates of the kuna adjusted for the relevant relative price indices (the ratio of price indices in partner countries and domestic prices). Producer price and consumer price indices, and the total harmonized consumer price index for the eurozone countries are used as deflators. The time series for consumer prices in Croatia is constructed in the following manner: retail price indices are used until December 1997 inclusive, and consumer price indices are used as of January 1998. Data for the last two months are preliminary. The historical data may be corrected for the subsequent changes in the data published by the statistical offices of the countries whose prices are included in the calculation of the index of the real effective exchange rate of the kuna.

Table H12: Gross External Debt by Domestic Sectors

External debt is defined as the external debt liabilities of residents on the basis of debt securities issued in foreign markets (at face value), credits (repo agreements included) regardless of their contractual maturity, deposits of non-residents, and trade credits granted by non-residents with contractual maturity of more than 180 days (90 days up to 11 July 2001 and 150 days up to 31 December 2002).

External debt by domestic sectors is shown in the same manner as in the Capital and Financial Account of the BOP. Item Government shows external debt of the general government, which includes the Republic of Croatia, central government funds (including the Croatian Bank for Reconstruction and Development, the State Agency for Deposit Insurance and Bank Rehabilitation, the Croatian Roads and the Croatian Highways), and local government. Item Croatian National Bank shows the central bank debts. Item Banks shows debts of banks. Item Other sectors shows debts of other banking institutions, non-banking financial institutions, enterprises, non-profit institutions and households, including craftsmen. Item Direct investment shows borrower – lender transactions of other sectors that are interrelated by ownership (borrower or lender owns more than 10 percent of the other).

Each sector data are further shown by contractual maturity (short-term and long-term) and by debt instrument. From the beginning of 2004, instruments included in item Currency and deposits (3. Banks) are reported in accordance with their maturity. Data for the previous periods are reported only on a long-term basis.

Outstanding gross external debt includes principal and interest ar-

rears, as well as accrual interest and future principal payments.

Outstanding debt data are shown at the CNB's midpoint exchange rate at the end of the period.

Data are considered preliminary until after publication of the final BOP data for the reporting quarter.

Table H13: Public Sector Gross External Debt, and Publicly Guaranteed and Non-Publicly Guaranteed Private Sector Gross External Debt

The gross external debt position presented in this Table highlights the role of the public sector.

Public sector includes the general government (including the Republic of Croatia, central government funds and local government), the central bank, public enterprises and mixed ownership companies. Public enterprises are defined as enterprises in 100% ownership of business entities from the public sector. Mixed ownership companies are defined as companies in which business entities from the public sector have a share larger than 50%.

Publicly guaranteed private sector gross external debt is defined as the external debt liabilities of business entities not covered by the definition of the public sector, the servicing of which is guaranteed by a business entity from the public sector.

Non-publicly guaranteed private sector gross external debt is defined as the external debt liabilities of business entities not covered by the definition of the public sector, the servicing of which is not guaranteed by the public sector.

Items are valued in the same manner as in Table H12.

Table H13: Public Sector Gross External Debt, and Publicly Guaranteed and Non-Publicly Guaranteed Private Sector Gross External Debt

Table H14: Gross External Debt by Domestic Sectors and Projected Future Payments

The Table shows outstanding gross external debt, projected principal payments and estimated interest payments according to the CNB's midpoint exchange rate at the end of the period.

Principal payments on Currency and deposits of non-residents are projected according to the available monetary statistics data on original and remaining maturity.

Estimated interest payments do not include interest on deposits from non-residents, repo transactions and hybrid and subordinated instruments, as well as late interest on these instruments. Future interest payments are estimated at the interest rates at the contracting time and do not reflect changes of variable interest rates.

Projected payments of accrual interest, which are an integral part of the gross external debt, increase the projected principal payments in the first quarter period and, consequently, decrease the interest payments estimated for the same period.

Table H15: International Investment Position – Summary

This table is made in accordance with the recommendations of the IMF (Balance of Payments Manual, Fifth Edition, 1993). Data sources include: reports from banks, enterprises, the Croatian National Bank, and the Zagreb Stock Exchange.

Data on international investments of the Republic of Croatia and international investments into the Republic of Croatia are recorded in euros (EUR) and US dollars (USD). Depending on the sources of data available, the conversion of values from the original currencies into the reporting currencies is performed:

- by applying the current rate of exchange or the average monthly midpoint exchange rate of the Croatian National Bank to transactions;
- by applying the midpoint exchange rate of the Croatian National Bank on the reporting date to balances.

The source of data on foreign direct and portfolio equity investment is the statistical research of the Croatian National Bank. The equity investments have been monitored since the beginning of 2001 and are corrected for changes in the official index of the Zagreb Stock Exchange (CROBEX).

Portfolio debt investment and other investment are classified according to the following institutional sectors: the Croatian National Bank, government, banks and other sectors. The government sector comprises central government and funds and local government authorities. The banking sector comprises banks.

Item Portfolio debt investment – Assets and liabilities comprises data on investments of residents into debt securities issued by

non-residents (assets) and investments of non-residents into debt securities issued by residents (liabilities). The source of data is the register of foreign credit relations kept by the Croatian National Bank, which also comprises claims and liabilities arising from bonds and money market instruments.

Item Other investment – Trade credits – Assets and liabilities comprises foreign claims and foreign liabilities of the said sectors arising from trade credits. The source of data is the register of foreign credit relations kept by the Croatian National Bank.

Item Other investment – Loans – Assets and liabilities comprises data on loans granted and received between residents and non-residents classified according to institutional sectors. The source of data is the register of foreign credit relations kept by the Croatian National Bank.

Item Other investment – Currency and deposits – Assets shows the total liquid foreign exchange of banks authorized to do business abroad reduced by the amount of foreign exchange deposited by banks with the CNB in fulfilment of a part of their reserve requirements. In addition to banks' foreign claims, foreign claims of the government sector are also shown. The sources of data are reports from the government and banks.

Item Other investment – Currency and deposits – Liabilities shows the total foreign exchange and kuna liabilities of the said sectors abroad arising from current accounts, time and notice deposits, sight deposits and demand deposits. The sources of data for this item are reports from banks.

Item International reserves of the CNB is compiled on the basis of the CNB Accounting Department reports which contain data on their balances and changes.

^a Irrespective of the note under the heading "Classification and presentation of data on claims and liabilities", the debt of the Croatian Roads, the Croatian Highways and the State Agency for Deposit Insurance and Bank Rehabilitation, presented in this table under headings 2. External debt of central government and 1. Domestic debt of central government, was reclassified from the sub-sector of the Republic of Croatia to the sub-sector central government funds in December 1998 and December 2002 respectively.

Table I3: Central Government Debt

Data on the central government debt are gathered from available data and are not reconciled with the Ministry of Finance of the Republic of Croatia. The central government debt consists of domestic and external debt. The sources of data on domestic debt of the central government are the following: the Ministry of Finance Monthly Sta-

tistical Review, Monetary Authorities Accounts and Banks' Accounts. The source of data on the central government external debt is the external debt statistics collected by the CNB. The supplement provides data on the central government guaranteed debt. Banks are the source of data on guarantees for domestic debt, while the external debt statistics collected by the CNB are the source of data on guarantees for external debt.

Table J1: Consumer Price and Producer Price Indices

The Central Bureau of Statistics (CBS) introduced the consumer price index (CPI) in early 2004. This indicator of price movements was compiled in accordance with the methodological principles laid down by the ILO and Eurostat. In its First Release, issued on 17 February 2004, the CBS published the data on movements in the CPI in January 2004 and the time series for the CPI as of January 2001. The CBS subsequently constructed the time series for the consumer price

index encompassing the period from January 1998 to December 2000. As expected following the introduction of the new index, the CBS has stopped publishing the retail price index (RPI) and the cost of living index whose calculation methodologies have not been adequately harmonised with internationally accepted standards. The main characteristic of the CPI are discussed in Box 1 in the CNB Bulletin No. 91 (2004). The data on the average year-on-year consumer price inflation rate are shown in the Bulletin table on Economic Indicators.

^a Since January 2007, the CPI has been calculated and published by the CBS on the new base 2005 = 100. Source: Central Bureau of Statistics.

Table J2: Core Consumer Price Indices

The Central Bureau of Statistics calculates the core consumer price index in the manner that agricultural products prices and administrative prices (which among others include the prices of electricity and refined petroleum products) are excluded from the basket of

goods and services used in the calculation of the total consumer price index. A total of 111 goods and services are excluded and their share in the consumer price basket stood at 30.06% in 2005 (of which: agricultural products accounted for 6.93 percentage points, and administrative prices for 23.13 percentage points). The zero weighting method is used to exclude the prices of goods and services.

Table J4: Consumer Confidence Index, Consumer Expectations Index and Consumer Sentiment Index

The CNB Consumer Confidence Survey has been carried out regularly since April 1999 in accordance with the methodology of the European Commission, the Joint Harmonised EU Programme of Business and Consumer Surveys. Until April 2005 the CNB conducted the survey once a quarter (in January, April, July and October). As of May 2005 the CNB carries out the survey in monthly frequency in co-operation with the European Commission, using its technical and financial assistance. The Croatian National Bank bears sole responsibility for the creation and conduct of the survey.

The questionnaire contains 23 questions, examining consumer perception of the changes as regards every-day economic issues. The value of the response index is determined in line with the set methodology, based on the responses to the questions from the Consumer Confidence Survey. The movements of three composite indices, consumer confidence index (CCI), consumer sentiment index (CSI) and consumer expectations index (CEI), are calculated and monitored based on the value of the response indices. Each of the said composite indices is calculated as the arithmetic average of the response indices (I), i.e. as the average of previously quantified responses to individual questions from the survey:

$$I_i = \sum_z^k r_i \cdot w_i$$

where: r is the value of the response, w is the share of respondents opting for a particular response (weight), i question from the ques-

tionnaire, z is the offered/chosen response, k is the number of offered responses to a particular question.

The value of the said indices ranges $-100 < I_i < 100$. Higher index values than those recorded over the previous period point to an increase in expectations (optimism) as regards the specific segment covered by the particular question.

The table shows the values of chosen response indices for the following questions:

I1: How has the financial situation of your household changed over the last 12 months?

I2: How do you expect the financial position of your household to change over the next 12 months?

I3: How do you think the general economic situation in Croatia has changed over the past 12 months?

I4: How do you expect the general economic situation in Croatia to develop over the next 12 months?

I7: How do you expect the number of people unemployed in Croatia to change over the next 12 months?

I8: In view of the general economic situation, do you think now is the right moment for people to make major purchases such as furniture, electrical/electronic devices, etc.?

I11: Over the next 12 months, how likely is it that you will save any money?

The components of composite indices are as follows:

CCI: I2, I4, I7×(-1), I11

CEI: I2, I4

CSI: I1, I3, I8.

List of Banks & Savings Banks

1 July 2007

Licensed Banks

1. Banco Popolare Croatia d.d., Zagreb
