^a Published by the CBS early in 2009, the revised GDP data for the 1995-2008 period include the estimation of non-observed economy, the new estimation of imputed dwelling rents and the new estimation and distribution of financial intermediation services indirectly measured (FISIM). The GDP data for 2006, 2007, 2008 and 2009 are based on quarterly estimates and preliminary.

^b CPI inflation rate.

^c In accordance with the obligations assumed during the pre-accession negotiations with the European Commission, the new legislative provisions governing the monitoring of foreign borrowing entered into force early in 2008. The external debt balance at end-2007 is reported in accordance with the old system. In order to provide for the comparability of annual data, the external debt is also calculated in accordance with the new system which shows an upward adjustment in the end-2007 balance, increasing it by EUR 325m or to EUR 33,254m. The advanced data processing system is in use since early 2009. For comparability reasons, the external debt balance at end-2008 is also calculated in accordance with the advanced system which shows an upward adjustment in the end-2008 balance, increasing it by EUR 366m or to EUR 39,491m. Data on round tripping, which stood at EUR 826m at end-2008 and EUR 1,499m at end-2009, are excluded from this figure.

^d Includes principal payments on bonds, long-term trade credits and long-term loans, as well as total interest payments net of interest payments on direct investment.

^e In the 1999-2001 period, total balance excluding capital revenues (GFS 1986) is shown on a cash basis. From 2001 on, it is shown on a modified accrual basis and includes CM, CR CPF and DAB. From 2008 on, CM is excluded from the total balance.

^f Public debt is the debt of the general government. From 2008 on, it excludes the debt of CM.

Information on Economic Trends

Real Sector

Monthly indicators for the January-March 2010 period suggest divergent movements in economic activity. Industrial production, whose changes usually correlate very strongly with total economic activity changes, rose in the observed period, accompanied by a slight increase in average real retail trade turnover relative to the last quarter of 2009. By contrast, the sharp decline in construction activity continued in the first two months, along with a drop in tourist overnight stays relative to the same period last year.

Total volume of industrial production, seasonally and calendar adjusted, went up 2.1% in the first quarter of the current year relative to the previous quarter, mostly due to the recovery of output in January. Supported by a favourable base period effect, this led to a marked drop in the negative annual rate of change in production for this activity, to as low as -0.8% in the observed period (-8.1% in the last quarter of

2009). However, data on real turnover in industry and on the change in producer inventories of finished products, the sum of which should at least approximate to total output, suggest a continuation of unfavourable movements in industry. It is therefore hard to draw definite conclusions about the aggregate demand trend. As suggested by the structure of changes in industry turnover by market (domestic and foreign) and nominal data on foreign trade in goods, foreign demand picked up while domestic demand dropped further in the observed period. An increase in total industrial production during the first quarter of 2010 was primarily due to the strengthening of capital goods manufacture. This seems to be mostly the result of stronger activity in the repair of machinery and equipment, which might be due partly to them not being regularly replaced when degraded as a result of the unfavourable economic situation and the resulting financial problems in many companies.

The manufacture of durable consumer goods also rose noticeably, due primarily to increased manufacture of furniture.

A positive contribution also came from the manufacture of non-durable consumer goods (notably pharmaceutical products and preparations) and energy. By contrast, a fall in the manufacture of intermediate goods, mostly due to a reduced demand for construction products (mining and quarrying, other non-metallic mineral products and fabricated metal products) impacted negatively on total industrial production movements.

Construction activity continued its strong downward trend over the first two months of 2010. As shown by seasonally and calendar adjusted data, the average number of hours worked at building sites dropped by approximately 5.0% in this period relative to the last quarter of 2009, as a result of negative changes in the volume of both works on buildings and civil engineering works. Such developments point to a continued weakening of investment activity in all institutional sectors, caused by a variety of factors. The fall in household investments in residential real estate can be largely accounted for by uncertainty about the future move-

ments of income, relatively high bank interest rates on home loans and, as concerns potential buyers, the expectations of a further price decrease. As a result of such behaviour on the part of households, the number of unsold flats on the market remained high, which inhibited any halt being made to the downtrend in residential construction investment. Contraction in investment activity in the aggregate corporate sector suggests a drop in profits, unfavourable terms of new project financing and uncertainty about the recovery of demand, whereas a shortfall in funds hampered government investments in infrastructure.

In the first three months of 2010, real retail trade turnover remained low, but rose slightly relative to the last quarter of 2009 (by 1.3%, seasonally and calendar adjusted). The absence of any significant increase in real retail trade was due to continued negative trends in the labour market, characterised by unemployment growth, a drop in wages and the resulting consumer pessimism. It seems that households still mostly refrain from buying durable goods and motor vehicles, which

tends to result, among other things, in a further decrease in this sector's borrowing from banks. This conclusion is corroborated by the latest results of the CNB's Consumer Confidence Survey (from April 2010), suggesting that many consumers still do not believe this to be the right time for buying such products, nor do they expect to increase their spending on them in the short run.

According to original CBS data, tourist overnight stays in commercial accommodation facilities dropped by 3.4% in the first quarter relative to the same period last year. However, seasonally and calendar adjusted data point to a much sharper fall. This year's Easter holidays fell on the very beginning of April, which had a favourable impact on the number of tourist nights stayed in March. On the other hand, one should also note the unfavourable base period effect as a result of the World Handball Championship held in Croatia in January 2009.

Employment and Wages

Despite slight positive changes in some industries, the unfavourable economic situation from the first quarter continued to affect the labour market, which recorded rising unemployment and declining employment. Despite stronger outflows from the CES register in March relative to the previous month, the still high level of inflows led to a monthly increase in registered unemployment by 1,033 (0.3%). As a result, unemployment stood at 318,658 at the end of the observed month. Due to such a high level of unemployment, the number of unemployed persons also increased sharply in March relative to the same month last year (by 19.2%). Despite the continuation of such exceptionally high unemployment, it should be noted that its growth slowed down annually at the end of February and March, for the first time after a year.

As suggested by administrative CBS data and the data on the number of persons insured with the CPIA, the increase in registered unemployment was paralleled by a decrease in em-

ployment in March. It should be noted that the CBS employment data for the period after January 2010 are preliminary, but the CPIA data, which are not subject to revision, point to an annual decline in the number of employed persons by 5.1% in March. Concurrently, seasonally adjusted data suggest a continuation of negative employment movements at the monthly level, noticeable ever since the end of 2008.

In line with these trends, the registered unemployment rate went up slightly at end-March from the previous month, standing at 18.4%, up 3.3 percentage points on March 2009. According to the latest Labour Force Survey results, the Survey unemployment rate stood at 9.2% in the last quarter of 2009, and rose to 9.1% at the annual level (it was 8.4% in 2008).

The adjustment of wages to the economic recession has gradually stepped up. The average nominal gross wage decreased by 1.8%, and the nominal net wage paid by 1.4% in March, relative to the same period last year. When the impact of the special tax on the average monthly net wage

is taken into account, the annual drop in wages was even sharper (4.2%). The fall in real wages, deflated by the consumer price index, also accelerated annually, since the more rapid decline in nominal wages was paralleled by accelerated annual growth of inflation in March.

Prices

The annual consumer price inflation rate rose slightly from 0.7% in February to 0.9% in March, but still remained very low. This growth was mostly fuelled by accelerated annual growth of energy prices, from 7.0% in February to 10.1% in March. This was partly due to a monthly price increase in refined petroleum products in March this year, but also due to an unfavourable base period effect, i.e. a drop in these prices during the same period last year. Concurrently, the annual rate of change in the prices of processed food products rose only slightly.

A fall in the annual rate of change in industrial product

Price Indicators, year-on-year and month-on-month rates of change

	Year-on-year rates		Month-on-month rates	
	2/10	3/10	3/09	3/10
Consumer price index and its components				
Total index	0.7	0.9	0.2	0.4
Energy	7.0	10.1	-1.6	1.3
Unprocessed food	-4.4	-4.7	0.4	0.0
Processed food (incl. alcoholic drinks and tobacco)	0.2	0.3	-0.2	-0.2
Industrial non-food without energy	-0.2	-0.5	1.5	1.1
Services	1.9	1.9	-0.1	-0.2

^a Calculated as an average of oil prices expressed in US dollars (prompt delivery): Dubai Fateh, UK Brent and West Texas Intermediate.

^b The index is calculated on the basis of raw materials prices expressed in US dollars.

Sources: CBS, Bloomberg and HWWI.

prices, excluding food and energy, produced the opposite effect on overall inflation trends, mostly due to the weaker seasonal growth of clothing prices in March relative to the same period in 2009. The annual rate of change in the prices of non-processed food products also decreased, mostly due to a continuing downward trend in meat prices on the domestic market. It can be observed that the movements in some categories of the consumer price index continue to be strongly affected by weak domestic demand. In March, the annual rate of change in prices of services remained at the previous month's level.

Core inflation continued its downward trend. Its annual rate of change dropped from -0.5% in February to -0.7% in March. This was largely due to the above-mentioned fall in the annual rate of change in clothing and meat prices.

The annual growth rate of industrial producer prices accelerated from 2.7% in February to 5.0% in March. This was mostly the result of a marked annual acceleration of energy prices, from 12.6% in February to 19.8% in March, primarily

due to a rise in the annual rate of change in producer prices of refined petroleum products. A somewhat smaller contribution to the annual acceleration of industrial producer prices came from an increase in the annual rates of change in intermediate goods prices and the prices of durable and non-durable consumer goods which remained very low, ranging between -1.3% and 1.4% in March 2010.

Exchange Rate

The stable kuna/euro exchange rate, achieved in the circumstances of balanced foreign exchange supply and demand and abundant liquidity in the money market, continued into April 2010. The daily kuna/euro exchange rate moved within a narrow range between -0.2% and 0.1% around the average exchange rate which stood at HRK 7.26/EUR. The kuna/euro exchange rate appreciated at the monthly level, by a slight 0.2% (on 30 April relative to 31 March).

Concurrently, the kuna weakened against the US dollar by 1.5%, and the exchange rate was HRK 5.47/USD at the end of the month. A continuing downward trend in the kuna/US dollar exchange rate was due to a further strengthening of the USD/EUR rate on the global foreign exchange market. The weakening of the common eurozone currency was mostly due to investors' uncertainty about the financing of the Greek budget deficit, but also due to fears of a possible spillover of financial problems to other eurozone members, notably Portugal and Spain.

Besides the depreciation of the kuna/US dollar exchange rate, the kuna also weakened against the pound sterling (by 2.6%), but strengthened against the Swiss franc (by 0.4%). In line with such movements of bilateral kuna exchange rates, the kuna weakened against the currency basket by a slight 0.2% in April 2010. This was largely due to a depreciation of the kuna/US dollar exchange rate, moderated by a slight kuna/euro appreciation.

The latest available data for February 2010 point to a 1.1% depreciation of the real effective kuna exchange rate deflated by consumer prices and that deflated by producer prices, relative to the previous month. This weakening was a sign of a nominal depreciation of the kuna against the currency basket, whereas there were no significant deviations of consumer and producer prices in Croatia from their movements in Croatia's trading partners. The real effective kuna exchange rates were still lower relative to the same period in 2009, suggesting a real appreciation of the kuna, mostly due to the nominal strengthening of the kuna against the basket of currencies, which was particularly noticeable in the kuna / US dollar appreciation at the annual level.

Monetary Developments

Monetary developments in March 2010 were marked by a monthly decrease in the net foreign assets of the monetary system, only slightly mitigated by the growth in net domestic assets. Under such circumstances, total liquid assets (M4)

decreased relative to the previous month, with the sharpest fall observed in money (M1).

Following its rapid growth over the first two months of 2010, money dropped by HRK 1.0bn in March. The fall in this monetary aggregate related almost completely to demand deposits, mostly the assets of other financial institutions and enterprises. Nevertheless, the annual growth rate of demand deposits was mildly positive at end-March (2.3%), largely due to a favourable base period effect. Contrary to this, the other component of M1, currency outside banks, remained stagnant in March, its annual rate of change standing at -6.6%.

Savings and time deposits dropped by HRK 0.5bn in March, continuing their downward trend. However, unlike in previous months when a fall in deposits was mostly caused by enterprises, in March, this was exclusively due to a HRK 1.9bn decline in deposits of other financial institutions. The financial institutions largely used the funds withdrawn from banks to subscribe for government bonds issued on the domestic market early in the month. In contrast to this, corporate deposits rose by HRK 1.3bn in March, and household deposits also increased slightly.

As suggested by changes in the currency structure of deposits, the substitution of foreign currency deposits for kuna deposits continued. In line with this, the share of foreign currency deposits in total savings and time deposits reached 79.5% at end-March, whereas the annual growth rate of foreign currency deposits, although slower than in 2009, remained very high (11.8%).

As foreign currency deposit growth only partly offset the fall in money and kuna deposits, total liquid assets dropped by HRK 1.3bn in March. Nevertheless, the annual growth rate of M4 was positive in March, standing at 1.6% at month-end.

Having slightly increased over the first two months, bank placements to the non-banking sector continued upwards at a similar pace in March. Coupled with a monthly increase of HRK 1.2bn (0.5%), their total growth over the first quarter amounted to HRK 2.3bn or 1.0%, whereas a negative rate of change of 0.4% in placements is still observable at the annual level. Viewed by sector, the growth in placements during March was still almost completely due to loans to enterprises, which is why their annual growth rate slightly increased, to 2.5% at the end of March. In contrast to corporate loans, loans to households remained almost stagnant over the first three months, thus continuing to show a negative annual rate of change of 3.2%. As for individual types of loans, the sharpest contraction was observed in any-purpose loans and car purchase loans.

Banks' claims on the central government increased by HRK 1.9bn in March, their total increase since the beginning of 2010 amounting to HRK 3.7bn or 8.4%. Such movements point to substantial central government funding needs which have been satisfied, as in 2009, by issuing bonds on the domestic and foreign markets and by borrowing from domestic banks. As for government deposits, there were no significant changes in March, except for CBRD funds deposited in an account with the CNB to the amount of HRK 2.0bn, for the co-financing of loans within the incentive programme of the Government of the Republic of Croatia (Model A).

As at the end of 2009, both foreign assets and foreign liabilities of banks increased concurrently (by HRK 2.5bn and HRK 3.3bn respectively) at the end of the first quarter of 2010. Viewed on an annual basis, banks' total net foreign assets increased by 11.9% at the end of March relative to end-March 2009, mostly due to the base period effect (a change in the regulation concerning the minimum foreign currency liquidity in February 2009 and the resulting fall in banks' foreign assets in March 2009).

The exceptionally high primary liquidity of the monetary system and steady domestic currency exchange rate movements continued into April. Through its favourable primary liquidity policy, the central bank intends to support faster bank lending growth, and it will apply such a policy until it starts threatening the exchange rate stability of the domestic currency or price stability.

The average kuna liquidity surplus of banks, including overnight deposits with the CNB, stood at HRK 4.9bn in April, and fell only slightly relative to the previous month. Kuna liquidity outflows were slightly influenced by foreign exchange transactions with the central government, resulting in net sales of EUR 38.7m, whereby EUR 0.3bn was withdrawn from the system. Reserve money (M0) reached HRK 54.1bn at the end of the month, its increase being mostly due to the seasonal growth of currency outside banks. The annual growth rate of M0 stood at 1.9% in April.

In April, the CBRD held its third auction for Model A loans to enterprises within the Government Economic Recovery Programme. To recall, within this financing model, an amount of HRK 2.0bn, approved by banks to the CBRD following a reduction in the reserve requirement rate by 1 percentage point a month before, was deposited in an account with the CNB. Following the first two successful auctions, the first withdrawals of the CBRD funds from this account held with the CNB began in April. While only HRK 2.0m has been withdrawn so far, the gradual utilisation of bank's credit lines will lead to further fund withdrawals and higher liquidity of banks and the economy.

International reserves remained almost unchanged in April relative to the previous month, standing at EUR 10.0bn, up 12.7% relative to the end of April 2009. Net usable international reserves (including special drawing rights) also saw no major changes and amounted to EUR 9.4bn at end-April; their annual growth rate was 17.6%.

Money Market and Interest Rates

Money market interest rates continued to hold steady in April, standing at a level approximately equal to the all-time low at the beginning of the current year.

The weighted interest rate on overnight interbank loans remained almost unchanged at 0.77% in April from March 2010. Despite a slight increase in its daily volatility from the previous month, this rate remained very low, fluctuating within a relatively narrow range from 0.47% to 1.02% in the observed period.

Kuna T-bills and one-year euro T-bills were placed at the two MoF auctions held in April 2010. Due to still very strong liquidity levels in the system, investor demand for T-bills was several times higher than the planned issue; nevertheless, yields on T-bills of all maturities increased slightly. The weighted interest rate on 91, 182 and 364-day kuna T-bills edged up from 2.20%, 3.04% and 3.68% respectively in March to 2.25%, 3.20% and 3.95% in April, and the weighted interest rate on one-year euro-denominated T-bills also increased slightly from 3.52% in March to 3.73% in April 2010. The total stock of subscribed T-bills grew in the observed period from HRK 23.2bn in late March to HRK 23.5bn in late April 2010, due to the continued growth in the stock of kuna T-bills, up from HRK 13.3bn at the end of March to HRK 13.7bn at the end of April; the stock of euro-denominated T-bills remained almost stagnant at EUR 1.4bn at the end of April from the end of March.

Due to ample liquidity in the financial system, some banks' lending and deposit interest rates continued to fall in the first quarter of this year from mid-2009. This primarily refers to interest rates on deposits and short-term loans, notwithstanding their sectoral allocation. In contrast, long-term interest rates mostly remained stable during the first three months of this year. The interest rate spread between foreign currency-indexed kuna loans and foreign currency deposits widened in the same period, while the spread between the so called "pure" kuna loans and deposits narrowed, especially in March.

Having converged towards interest rates on long-term loans with a currency clause for several months, interest rates on short-term kuna corporate loans without a currency clause dropped to 7.24% in March (from 8.32% in February and 8.31% in January), thus falling by 0.43 percentage points below the March level of interest rates on long-term loans indexed to foreign currency. This was the first time since the introduction of the current interest rate monitoring methodology in late 2001 that interest rates on short-term loans dropped below those on long-term kuna corporate loans. This can be explained by a steep decrease in interest rates on the loans maturing in three to twelve months and their increasing share in short-term kuna loans.

Interest rates on long-term household loans with a currency clause edged down in the first three months of this year, remaining, nevertheless, relatively high (above 8.0%), while interest rates on short-term loans without a currency clause granted to this sector held steady at 12.6%, as in the previous year. Interest rates on credit card loans and overdraft facilities, two main components in the short-term interest rate structure, were very stable, while interest rates on long-term loans reduced exclusively because of a drop in interest rates on car purchase and other long-term loans.

Interest rates on kuna time deposits without a currency clause, decreasing sharply throughout most of 2009, continued to decrease in early 2010, although at a slightly slower pace, hitting a record low of about 2.0% in March, according to the latest available data. These interest rate developments reflect a sharp decrease in interest rates on corporate deposits with a maturity of up to one month (standing at 0.74% in March), whose developments are closely related to money

market trends, and a drop in interest rates on corporate deposits with a maturity of one to two years, also in tune with the mentioned interest rate developments. Interest rates on foreign currency time deposits fell slightly from 3.65% early in the year to 3.31% in February and 3.17% in March.

These lending and deposit interest rate trends led to a continued slight increase in the interest rate spread between foreign currency-indexed kuna loans and foreign currency deposits in March, approaching 5.0 percentage points, while the interest rate spread between “pure” kuna loans and deposits decreased, stabilising the overall interest rate spread at around 7.0 percentage points.

Trade in Goods

According to the preliminary CBS data, total exports of goods stood at EUR 2.0bn in the first quarter of 2010, increasing by 4.8% from the same period in 2009, and total imports of goods amounted to EUR 3.3bn, dropping by 10.3%. In accordance with such trends, the negative balance of trade in goods reduced by one fourth relative to the first three months in the previous year and the imports/exports coverage rate improved from 51.1% in the first quarter of 2009 to 59.6%.

The February contraction in foreign trade was followed by an increase in total exports in March, due predominantly to ship exports. In addition, the decrease in imports decelerated only slightly, which can be attributed to a continued contraction in domestic demand. Seasonally adjusted data for the first quarter of the current year indicate that the overall goods trade deficit continued to narrow, down by 16.0% from the previous quarter. These trends largely resulted from a sharp increase in the positive trade balance in other transport equipment (primarily ships); however, the contraction in the overall deficit, albeit slightly lower, remains evident even if this division is excluded from total goods trade. When this division is excluded, together with oil and refined petroleum products, goods exports rose at a low quarterly rate of 0.8%. Negative import trends again intensified slightly (the quarterly rate of decrease was 2.6%) in the majority of SITC divisions.

Goods exports, excluding ships and refined petroleum products, decreased from the same period in the previous year, although at a considerably lower rate than in the same period in 2009 (2.3% compared with 13.0%). The improved results were predominantly due to exports of metalliferous ores and metal scrap, medical and pharmaceutical products and plastics in primary forms. It should be noted that, in contrast with the previous year, exports grew in most of the remaining SITC divisions. On the other hand, exports of electrical machinery, apparatus and appliances, fish and preparations and electric current, decreased at the sharpest rate.

In contrast with exports, imports, excluding ships and refined petroleum products, continued to show strong negative trends, decreasing at an annual rate of 15.8% in the first quarter, compared with 18.1% in the same period in the previous year. Imports of road vehicles fell at the sharpest rate,

as in most of 2009. Imports of miscellaneous capital goods, especially machinery specialised for particular industries and general industrial machinery and equipment, as well as imports of iron and steel and natural and manufactured gas, also contracted significantly. Imports grew only in a small number of divisions, including organic chemicals, artificial fertilisers and non-ferrous metals.

External Debt

Croatia's gross external debt stood at EUR 42.4bn at the end of February 2010 (excluding round-tripping transactions), declining by EUR 0.6bn from the end of 2009. Banks, and to a smaller extent the government, were major contributors to the debt decline, whereas foreign liabilities of other domestic sectors increased slightly in the same period.

Following a brief increase in December 2009, external debt of banks fell by EUR 0.5bn in January 2010, due primarily to bank liabilities on currency and deposits and in a small measure to short-term loans. Due to a lack of significant transactions, the share of bank debt in total external debt dropped below 25% in February.

Foreign liabilities of other sectors (mainly enterprises and non-banking financial institutions, including the CBRD) mostly stagnated in the first two months of 2010, continuing the trend recorded throughout the second half of 2009, with the exception of September, which saw several large drawings. Foreign liabilities of non-banking financial institutions decreased, primarily on account of the repayment of long-term loans, while the debt of majority privately owned enterprises increased, with late principal payments on existing loans increasing once again. New long-term loan withdrawals led to an increase in the debt of public and mixed-ownership enterprises.

The direct investment-related debt (round-tripping transactions excluded) increased slightly in the first two months of 2010, the bulk of the increase generated by private enterprise borrowing in January. If the direct investment-related debt, which excludes banks' hybrid and subordinated instruments, is added to the debt of other sectors, the total debt of other sectors amounts to slightly less than two thirds of Croatia's total external debt.

No major transactions were conducted by the government sector in January 2010, while in February, due primarily to the EUR 500m repayment of a eurobond issued in 2003, this sector's external debt fell by EUR 0.3bn. However, the effect of this transaction was offset by the withdrawal of a long-term World Bank loan of EUR 0.2bn. The overall public sector external debt slightly reduced in January, on account

of the transactions conducted by the CBRD and public enterprises, while a more considerable decrease in February resulted from the described trends in central government debt.

Government Finance

According to the preliminary MoF data, consolidated central government revenues totalled HRK 7.9bn in January 2010, down 3.6% on the same month last year. The decrease resulted from a drop in revenues from social contributions, caused by the intensification of unfavourable labour market developments. In contrast, opposite trends were shown by revenues from other taxes, due to the special tax on salaries, pensions and other income introduced in 2009, and VAT revenues. However, VAT revenue trends reflected the increases in the basic VAT rate since August 2009, rather than a growth in domestic demand or foreign tourist spending. This can be concluded from a marked annual decrease in both nominal and real retail trade turnover and goods imports, which resulted in a drop in excise revenues.

Consolidated central government revenues increased by 8.1% annually in January, reaching HRK 9.6bn. Almost a half of the increase was caused by a growth in expenditures on general government grants, which comprise the funds allocated to local government units for the financing of decentralised functions. Interest expense also increased sharply, reflecting the increases in short-term borrowing and the increased price of sources of financing, and so did other capital expenditures, due to the transfer of the payment of state incentives for housing savings from 2009 to 2010. In contrast with the previous years, the expenditure items having the largest shares in total expenditures did not contribute to the overall expenditure growth. That is, after the wage calculation basis for civil servants and government employees had been restored in the second quarter of 2009 to its December 2008 level, employee compensation reduced, while social benefits, due to a decrease in social assistance benefits, stagnated.

The acquisition of non-financial assets grew by a significant 19.8%. However, with the investments having been relatively low at the beginning of the year, the increase was not significant in absolute terms. The acquisition of fixed assets (machinery and equipment and building and structures) was the largest. The disposal of non-financial assets was considerably lower than the acquisition, with the result that consolidated central government net borrowing (GFS 2001, on a cash basis) amounted to HRK 1.9bn in January 2010.

The deficit was financed and due liabilities refinanced primarily by using the funds from the central government deposits with the CNB, raised by a bond issue in the US market last year, and, to a smaller extent, by borrowing. As a result, central government debt rose only slightly from the end of 2009, standing at HRK 116.2bn at the end of January 2010, whereas contingent debt arising from government guarantees issued reduced slightly in January.

Statistical Survey

Classification and Presentation of Data on Claims and Liabilities

Data on financial institutions' claims and liabilities are classified according to institutional sectors and financial instruments. Institutional sectors are: financial institutions, central government and funds, other domestic sectors and foreign sector.

The financial institutions sector includes the following subsectors: monetary authorities (the central bank), banks, other banking institutions and non-banking financial institutions. The central bank is the Croatian National Bank (CNB). Banks are institutions to which the Croatian National Bank has issued a license to perform banking business services in accordance with the Banking Act, including savings banks during a transition period. Data on banks do not include claims and liabilities of banks undergoing bankruptcy proceedings, nor former branches of banks headquartered outside the Republic of Croatia. Other banking institutions comprise housing savings banks, savings and loan cooperatives and investment funds. Non-banking financial institutions are financial institutions not classified as banks or other banking institutions (e.g. insurance companies, pension funds).

The central government and funds consists of two subsectors, the Republic of Croatia and central government funds. Until December 2005, the subsector Republic of Croatia included government authorities, comprising the Croatian Roads, the Croatian Motorways

and the State Agency for Deposit Insurance and Bank Rehabilitation. The subsector central government funds includes the Croatian Institute for Health Insurance, the Croatian Pension Insurance Administration, the Croatian Employment Service, the Croatian Privatisation Fund, the Croatian Waters and the Croatian Bank for Reconstruction and Development.

Since January 2004, the Croatian Roads, the Croatian Motorways, and the State Agency for Deposit Insurance and Bank Rehabilitation have been reclassified, from the subsector Republic of Croatia to the subsector central government funds.

Other domestic sectors include local government authorities, public and other enterprises and households, including craftsmen and non-profit institutions providing services to households. The subsector other enterprises also comprises banks undergoing bankruptcy proceedings. In some tables other domestic sectors are divided into the following subsectors: local government (which comprises units of local and regional self-government), public and other enterprises, and households (including craftsmen and non-profit institutions).

Foreign sector includes foreign legal and natural persons.

All data on claims and liabilities refer to balances at the end of the reporting period. Foreign currency items are reported in their kuna equivalent at the CNB's midpoint exchange rate at the end of the reporting period.

^a Domestic credit decreased by a one-off HRK 2,759.4m.**Table A1: Monetary and Credit Aggregates**

The table shows data on some basic monetary and credit aggregates, including their monthly growth rates. In September 1999, all the monetary aggregates were revised. In previous publications of the CNB, data on claims and obligations of savings banks were not included in the compilation of the monetary aggregates.

Reserve money is taken over in its entirety from the Monetary Authorities Accounts (Table C1).

Money (M1) is defined in the same way as the corresponding item in the Monetary Survey (Table B1). It comprises currency outside banks, deposits with the CNB by other banking institutions and other domestic sectors as well as banks' demand deposits. Money (M1a) comprises currency outside banks and banks' demand deposits, increased by the demand deposits of the central government and funds with banks.

Broadest money (M4) comprises Money (M1), savings and time deposits, foreign currency deposits as well as bonds and money market instruments (all components are taken over from the Monetary Survey, Table B1).

Net domestic assets are defined as a difference between total liquid assets and foreign assets (net).

Domestic credit comprises banks' claims on other domestic sectors, other banking institutions and non-banking financial institutions.

In May 1999, bankruptcy proceedings have been initiated against several banks so their assets and liabilities are excluded from monetary statistics. In April 1999, those banks' share in monetary aggregate M1 amounted to HRK 259.3m and in monetary aggregate M4 amounted to HRK 4,035.8m. Data for June 1999 are comparable with data for July 1999 if Domestic credit is increased by HRK 3,513.5m.

Table B1: Monetary Survey

The monetary survey shows consolidated data from the Monetary Authorities Accounts (Table C1) and Banks' Accounts (Table D1).

Foreign assets (net) are the difference between total foreign assets and total foreign liabilities of the CNB and banks.

Domestic credit is the sum of corresponding items from Monetary Authorities Accounts and Banks' Accounts. Claims on central government and funds are reported on a net basis, i.e. decreased by central government and funds' deposits with the CNB and banks.

Money is the sum of currency outside banks, deposits by other

banking institutions with the CNB, deposits by other domestic sectors with the CNB and banks' demand deposits (item Demand deposits in Banks' Accounts, Table D1).

Items Savings and time deposits, Foreign currency deposits as well as Bonds and money market instruments are entirely taken over from the Banks' Accounts, while item Restricted and blocked deposits represents the sum of corresponding items from the Monetary Authorities Accounts (excluding banks' blocked deposits with the CNB) and Banks' Accounts. Other items (net) are unclassified liabilities decreased by unclassified assets.

Table B2: Number of Reporting Banks and Savings Banks and their Classification by Total Assets

The table shows the total number of banks and savings banks during the transition period which report monthly to the CNB. Their operations are shown in the Banks' Accounts. Monetary statistics includes reporting institutions under winding-up and, until February 2005, institutions whose operating licences have been revoked, but

which have not initiated winding-up proceedings.

Special reporting requirements applied to savings banks until June 1995. Savings banks were not legally obliged to report on their operations, so that data up to June 1995 relate only to those savings banks that reported voluntarily to the CNB. From July 1995 on, the data cover all registered savings banks.

The table also shows the classification of reporting banks and savings banks according to their total assets.

^a From October 2001 to May 2003, Liabilities to foreign banks include also liabilities based on CNB bills subscribed by non-residents. ^b The CDA accounts with the CNB for the gross and net settlement of purchased securities are reclassified from the central government sector to other domestic sectors from December 2002 onwards.

Table C1: Monetary Authorities Accounts

The table reports data on claims and liabilities by monetary authorities.

Foreign assets include the following forms of foreign currency and kuna claims on foreign legal and natural persons: monetary gold, holdings of special drawing rights, foreign cash in vault, reserve position in the International Monetary Fund, current account balances with foreign banks, time deposits with foreign banks and accrued interest, foreign currency security investments and other claims.

Claims on central government and funds are loans and overdue claims on the budget of the Republic of Croatia. In accordance with the Croatian National Bank Act that entered into force in April 2001, the Croatian National Bank may not extend credit to the Republic of Croatia. Hence, this item comprises only overdue claims on the budget of the Republic of Croatia based on the payment system operations and the liabilities to the IMF and foreign banks. Until April 2001, Claims in kuna were short-term loans granted for the purpose of overcoming timing differences between incoming revenues and execution of budgetary expenditures, long-term loans granted by special regulations by the government of the Republic of Croatia, and overdue claims on the budgetary central government, while Claims in foreign currency was a counter-entry to the liability to the IMF based on the succession of membership in that institution.

Claims on other domestic sectors are loans and overdue claims on other domestic sectors, including banks in bankruptcy proceedings.

Claims on banks are credits to banks and overdue claims on banks. Credits to banks comprise Lombard credits, short-term liquidity credits, other credits and reverse repo transactions. Item Lombard credits comprises credits to banks for regular maintaining of the day-to-day liquidity, which were replaced by Lombard credits in December 1994. Short-term liquidity credits, which have been granted since the beginning of 1999, also serve to bridge liquidity problems. Other credits include intervention credits, special credits for bridging liquidity problems granted in the past (initial credits, prerehabilitation credits), due but unpaid credits and deposits of the CNB with banks. From April 2005 on, reverse repo transactions are conducted on a weekly basis. Overdue claims on banks comprise settlement account overdrafts (until mid-1994) and banks' failure to correctly and promptly allocate and maintain statutory reserve requirements.

Since May 1999, Claims on other domestic sectors include overdue claims on banks against which bankruptcy proceedings have been initiated. Due to the reclassification of savings banks from the

subsector other banking institutions to the subsector banks, data for Claims on banks and Claims on other banking institutions have been revised.

Reserve money consists of currency outside banks, cash in banks' vaults, banks' deposits with the CNB, other banking institutions' deposits and other domestic sectors' deposits with the CNB. Banks' deposits are: settlement account balances, statutory reserves deposited on a special account with the CNB (including, from March 2006, special reserve requirement on liabilities arising from issued securities), CNB bills on an obligatory basis and overnight deposits. Deposits by other banking institutions included, until September 2003, settlement account balances of housing savings banks. Deposits by other domestic sectors are other domestic sectors' giro account balances which are deposited with the Croatian National Bank in accordance with law or other regulation.

Restricted and blocked deposits include required foreign currency reserves and accrued interest, restricted deposits and blocked foreign currency deposits. Banks are required to set aside the reserve requirements against certain foreign currency sources of funds and the marginal reserve requirements (from August 2004 to October 2008) in special accounts at the Croatian National Bank. Restricted deposits are kuna funds set aside on the basis of a court order or regulations, kuna funds set aside in the period between May 1999 and April 2002 and deposits of banks against which bankruptcy proceedings have been initiated. Blocked foreign currency deposits are funds that were set aside in special accounts at the Croatian National Bank for repaying unpaid amounts due to foreign creditors.

Foreign liabilities include use of IMF credits, liabilities to international financial institutions and foreign banks and accrued interest.

Central government and funds' deposits are demand deposits and foreign currency deposits of the Republic of Croatia and central government funds with the CNB, and CNB bills purchased by central government institutions.

CNB bills are kuna and f/c CNB bills on a voluntary basis, excluding CNB bills voluntarily purchased by central government institutions.

Capital accounts include reserves, provisions and the income and cost accounts.

Other items (net) are unclassified liabilities decreased by unclassified assets of the Monetary Authorities Accounts.

Due to the reclassification of savings banks from the subsector other banking institutions to the subsector banks, data for Currency outside banks, Banks' cash in vaults, Banks' deposits and Deposits of other banking institutions were revised.

Table D1: Banks' Accounts

Banks' Accounts include data on banks' claims and liabilities. Banks' mutual claims and liabilities are consolidated.

Required reserves held at the central bank include kuna and foreign currency reserves. Kuna reserves include vault cash and kuna funds held in accounts at the central bank. Foreign currency reserves include foreign currency held in the CNB's foreign currency accounts.

Foreign assets are the following forms of kuna and foreign currency claims on foreign legal and natural persons: foreign cash in vaults, current account balances with foreign banks and time deposits with foreign banks (including loro letters of credit and other forms of collateral), securities, loans, and equities.

Claims on central government and funds are the following forms of claims in kuna and foreign currency: securities and loans.

Claims on other domestic sectors include the following claims in kuna and foreign currency: money market instruments, bonds, loans (including acceptances), and equities.

The same forms of kuna and foreign currency claims are included in claims on other banking institutions and non-banking financial institutions, with one difference: Claims on other banking institutions also include deposits with those institutions.

Items Demand deposits, Savings and time deposits, Foreign currency deposits as well as Bonds and money market instruments comprise banks' liabilities to other domestic sectors, other banking institutions and non-banking financial institutions.

Demand deposits include giro and current accounts balances and banks' obligations arising from kuna payment instruments issued, minus currency in the payment system, i.e. checks in banks' vaults and checks in collection.

Savings and time deposits are kuna sight deposits as well as kuna time and notice deposits.

Foreign currency deposits are foreign currency sight deposits as

well as foreign currency time and notice deposits.

Bonds and money market instruments are banks' liabilities for securities issued (net) and loans received. Issued subordinated and hybrid instruments, purchased by foreign investors, are excluded from this item.

Foreign liabilities comprise the following forms of kuna and foreign currency liabilities to foreign legal and natural persons: giro and current accounts, savings deposits (including loro letters of credit and other forms of collateral), time deposits, loans received and liabilities due. Issued subordinate and hybrid instruments, purchased by foreign investors, are also included in loans received.

Central government and funds' deposits are all forms of banks' kuna and foreign currency liabilities (except restricted and blocked deposits) to the central government and funds.

Credit from central bank comprises loans received from the CNB and deposits by the CNB with banks. Repurchase of securities is also considered and treated as a loan.

Restricted and blocked deposits comprise the following banks' liabilities: kuna and foreign currency restricted deposits by other domestic sectors, other banking institutions, non-banking financial institutions, central government and funds as well as foreign legal and natural persons, and households' blocked foreign currency deposits, regulated by the Act on Converting Households' Foreign Currency Deposits into the Public Debt of the Republic of Croatia.

Capital accounts are share capital, profit or loss for the previous and current year, retained earnings (loss), legal reserves, reserves provided for by the articles of association and other capital reserves, hedging reserves, unrealised gains (losses) from financial assets classified as available-for-sale assets, value adjustments and collectively assessed impairment provisions.

Other items (net) are unclassified liabilities decreased by unclassified assets, including the fair value of derivative financial instruments.

Tables: D2 – D12

This group of tables (with the exception of Table D5) provides a detailed analysis of the relevant asset and liability items from Table D1 (Banks' Accounts).

Table D6: Demand Deposits with Banks

The table shows demand deposits with banks, classified by domestic institutional sectors.

Demand deposits are the sum of other domestic sectors', other

banking institutions' and non-banking financial institutions' giro and current accounts balances, minus currency in the payment system (i.e. checks in banks' vaults and checks in collection). Banks' obligations arising from kuna payment instruments issued are included in the household sector.

Table D8: Foreign Currency Deposits with Banks

The table shows foreign currency savings and time deposits by other domestic sectors, other banking institutions and non-banking

financial institutions with banks. Foreign currency savings deposits are all foreign currency sight deposits and foreign currency payment instruments issued, while foreign currency time deposits also include foreign currency notice deposits.

Table D9: Bonds and Money Market Instruments

The table shows banks' liabilities for securities issued (net) and loans received from other domestic sectors, other banking institutions and non-banking financial institutions.

Money market instruments (net) comprise banks' net liabilities for CNB bills, bills of exchange (issued and accepted) and other se-

curities issued.

Bonds (net) comprise banks' net liabilities for kuna and foreign currency bonds issued, as well as issued subordinated and hybrid instruments, excluding those purchased by foreign investors.

Other domestic borrowing comprises loans received, which are reported in the total amount and classified by institutional sectors.

Table D10: Banks' Foreign Liabilities

The table shows banks' total foreign currency and kuna liabilities to foreign legal and natural persons, with the exception of restricted kuna and foreign currency deposits by foreign legal and natural persons.

Banks' foreign liabilities comprise foreign currency liabilities and

foreign kuna liabilities.

Within foreign kuna and foreign currency liabilities, liabilities to foreign banks are reported separately from liabilities to foreign non-banks (total and by financial instruments). Loans and advances also include issued subordinated and hybrid instruments purchased by foreign investors.

Table D11: Central Government and Funds' Deposits with Banks

The table reports total banks' kuna and foreign currency liabilities to the central government and funds, with the exception of restricted (kuna and foreign currency) deposits by the central government and funds with banks.

Kuna and foreign currency deposits by the Republic of Croatia and central government funds are shown separately. Kuna deposits comprise demand deposits, savings deposits, time and notice deposits, and loans received from the central government and funds. Foreign currency deposits comprise savings deposits, time and notice deposits, and refinanced loans and advances.

Table E1: Housing Savings Banks' Accounts

Housing savings banks' accounts include data on claims and liabilities of the Croatian housing savings banks. All housing savings banks' claims and liabilities refer exclusively to domestic sectors.

Housing savings banks' required reserves held at the central bank include funds in vaults. Until September 2003, they also included kuna funds held in accounts at the central bank.

Claims on central government and funds are claims in kuna on the Republic of Croatia and central government funds.

Claims on other domestic sectors include kuna loans to local government and households.

Claims on banks include loans to banks, as well as deposits with banks, including, from October 2003 on, accounts for regular opera-

tions with banks.

Claims on other banking institutions include investments in investment funds.

Item Time deposits includes local government and households' time deposits.

Bonds and money market instruments are housing savings banks' liabilities for securities issued (net) and loans received.

Capital accounts are share capital, profit or loss for the previous and current year, retained earnings (loss), legal reserves, reserves provided for by the articles of association and other capital reserves, hedging reserves, unrealised gains (losses) from financial assets classified as available-for-sale assets, value adjustments and collectively assessed impairment provisions. Other items (net) are unclassified liabilities decreased by unclassified assets.

^a Weighted averages of weighted repo rates achieved at regular reverse repo auctions of the CNB in the reporting month. ^b Breaks in the series of data are explained in notes on methodology. ^c Since 14 December 2005. ^d Since 31 December 2007.

Table F1: Credit Rates of the Croatian National Bank

The table shows interest rates used by the CNB to calculate and charge interest on credits from the primary issue and on all other claims.

Credit rates of the CNB are set by decisions of the Council of the Croatian National Bank, on a yearly basis. Exceptionally, from June 1995 interest rate charged by the CNB on Lombard credits was 1.5 percentage points higher than the weighted average interest rate on CNB bills on a voluntary basis (which serve as collateral for Lombard credits) in cases when the weighted average interest rate was higher than 16.5%. Congruently, from June 1995 to August 1996 the table reports the weighted average interest rate on Lombard credits.

Time series presented in the table contain certain breaks, due to changes in the CNB's monetary policy instruments.

Data shown in column 4 refer to the weighted averages of the weighted repo rates achieved at regular reverse repo auctions of the CNB in the reporting month.

Data shown in column 7 refer, until September 1994, to interest rates on special credits for savings deposits' payments and for pay-

ments from households' current accounts, and from October 1994 until September 1997 to interest rates on daily credits for savings deposits and households' current accounts in kuna. Daily credits, as opposed to special credits, are paid back on the same day. In October 1997, this instrument was replaced by daily credits for overcoming short-term liquidity problems that are collateralised by CNB bills. From December 1998 to April 1999, this credit is incorporated in Lombard credit, applying different interest rate for its usage within one day.

Data shown in column 8 refer, until December 1994, to interest rate on initial credits, and since 18 March 1998, to credits for overcoming liquidity problems of banks under evaluation for entry into rehabilitation and restructuring procedures and since February 1999, to interest rates on short-term liquidity credits. From December 1999 on, data show interest rates on short-term liquidity credit with a maturity over 3 months which is 1 percentage point higher than interest rate on Lombard credits. Interest rate on short-term liquidity credit up to 3 months is 0.5 percentage point higher than interest rate on Lombard credits.

Table F2: Deposit Rates of the Croatian National Bank

The table shows interest rates used by the CNB to calculate and pay interest on funds deposited with the CNB and on issued securities.

Interest rates paid by the CNB for appropriated statutory reserve funds are set by a decision of the Council of the Croatian National Bank. Until April 2005, the appropriated statutory reserve funds included the calculated statutory reserve funds that were deposit in a special statutory reserve account with the CNB, or maintained (in average) in banks' settlement accounts, or deposited in a special account with the CNB for the settlement of net positions in the National Clearing System (NCS). From April 2005, they include the calculated statutory reserve funds allocated to a special statutory reserve account with the CNB (column 3).

Interest rates on CNB bills on an obligatory basis are set by a decision of the Council of the Croatian National Bank.

Interest rates on CNB bills on a voluntary basis are set at CNB bills' auction sales. Congruently, columns 5, 6 and 7 report the weighted average interest rates attained at auctions of CNB bills. From November 1994 through January 2001, columns 7 and 8 report interest rates on CNB bills on a voluntary basis due in 91 and 182 days respectively.

From April 1998 on, columns 9 through 13 report the weighted average interest rates on CNB bills on a voluntary basis in EUR and USD (until December 1998, in DEM and USD) attained at CNB bills' auctions as a weighted average of subscribed amounts in those two currencies.

Column 14 reports the interest rate on overnight deposits with the CNB.

Table F3: Banks' Reserve Requirements

This table shows data on monthly averages of day-to-day balances of banks' kuna and foreign currency reserve requirements with the CNB. Savings banks are included beginning in July 1999.

Column 3 shows the weighted average reserve requirement ratio as a percentage of the kuna and foreign currency reserve requirements (column 4) in the reserve base.

Reserve requirement (column 4) represents the prescribed amount of funds banks are required to deposit in a special statutory reserve account with the CNB, or to maintain (in average) in their settlement accounts and in vaults, or in accounts of liquid foreign currency claims (which include foreign cash and checks in foreign currency, liquid foreign currency claims maintained in the accounts with the high-grade foreign banks and foreign currency CNB bills).

Column 5 shows the amount of kuna reserve requirements. Between January 1995 and December 2000, this amount corresponded with the statutory reserve requirement instrument, while until December 1994 it comprised two instruments: statutory reserves and liquid assets requirement – LAR (except for the part in which banks were conforming to this requirement by registering CNB bills on a voluntary basis). In December 2000, reserve requirements in kuna and in foreign currency were unified, i.e. reserve requirements rate, periods for calculating, allocating and maintaining reserve requirements were unified, as well as a minimum percentage of the total reserve requirements deposited with the Croatian National Bank. From September 2001 on, column 5 includes also the f/c component of reserve requirements that is set aside/maintained in kuna.

Column 6 shows the amount of foreign currency reserve requirements, i.e. the prescribed amount of funds banks are required to deposit in the CNB's foreign currency accounts, or to maintain (in

average) in accounts of liquid claims. Until November 2000, the calculation base consisted of the average daily balances of household foreign currency savings deposits with a remaining maturity of up to 3 months, while starting from December 2000 the base consists of foreign currency sources of funds, including: ordinary foreign currency accounts, special foreign currency accounts, foreign currency accounts and foreign currency sight deposits, received foreign currency deposits and received foreign currency loans, as well as obligations arising from securities issued in foreign currency (excluding banks' equity securities). From November 2001 on, the base includes also hybrid and subordinated instruments.

Column 7 shows the total amount of other obligatory deposits with the CNB, including CNB bills on an obligatory basis, those CNB bills on a voluntary basis used by banks to maintain the prescribed minimal liquidity (LAR), special statutory reserves until July 1995, special reserve requirement on liabilities arising from issued securities from March 2006 to February 2009, statutory reserves on f/c deposits, f/c credits from foreign banks and guarantees for such credits and marginal reserve requirement (from August 2004 to October 2008).

Column 8 shows the portion of the kuna reserve requirement which banks deposit in a statutory reserve account with the CNB (until December 1994, this amount corresponded with the statutory reserve instrument, while since January 1995 a minimum percentage of the total reserve requirement banks are required to deposit in a special statutory reserve account with the CNB has been prescribed). In April 2005, this percentage was set at 70%.

Column 9 shows the portion of the foreign currency reserve requirement which banks deposit in the CNB's foreign currency accounts. The percentage for allocating the foreign currency component of reserve requirements calculated on the basis of foreign

Table F4: Banks' Liquidity Indicators

	July	257.7	22,619.0	0.25	174.1	–	–	4,513.3
	August	233.3	24,161.5	0.23	79.8	–	–	3,770.8
	September	181.5	24,897.9	0.18	129.7	–	–	4,529.6
	October	253.8	24,146.7	0.26	–	–	–	5,406.8
	November	320.1	24,082.1	0.33	–	–	–	5,101.7
	December	880.0	24,885.6	0.91	–	–	–	4,776.6
	2010	January	784.1	24,541.5	0.82	–	–	–
February		519.6	23,949.6	0.55	–	–	–	5,225.8
March		555.7	23,023.3	0.59	–	–	–	5,116.9

currency funds of non-residents and foreign currency funds received from legal persons in a special relationship with a bank amounts to 100%, while the percentage for allocating the remaining portion of the foreign currency component of reserve requirements amounts to 60%.

Column 10 shows the weighted average remuneration rate on all forms of immobilised kuna funds which include reserve requirements and other obligatory deposits with the CNB.

Column 11 shows the weighted average remuneration rate on allocated funds in foreign currency, including the marginal reserve requirement funds (from August 2004 to October 2008). From November 2009 on, the CNB does not pay remuneration on the allocated foreign currency component of reserve requirements.

Table F4: Banks' Liquidity Indicators

The table reports monthly averages of day-to-day balances of some indicators of banks' liquidity. Savings banks are included beginning in July 1999.

Column 3 shows free reserves in kuna, defined as a difference between the average balance in the settlement account and the average balance in the vault (until October 2008). From November 2008 on, they are defined as a difference between the average balance in the settlement account in the kuna reserve requirement maintenance period and the minimal average settlement account balance prescribed

by the kuna reserve requirement calculation methodology.

Column 4 shows free reserves in foreign currency, defined as funds for the maintenance of foreign currency reserve requirements (foreign cash and checks in foreign currency, liquid foreign currency claims maintained in the accounts with the high-grade foreign banks and foreign currency CNB bills) decreased by the minimal required balance of these funds in the same period.

Column 5 shows the primary liquidity ratio as a percentage of monthly day-to-day kuna free reserves averages (column 3) in monthly day-to-day averages of deposits which constitute the reserve base.

Column 6 shows the monthly average of day-to-day balances of secondary liquidity sources used. Secondary liquidity sources comprise: Lombard credits (since December 1994), short-term liquidity credits (since February 1999) and overdue liabilities to the CNB.

Column 7 reports the monthly average of day-to-day balances of kuna CNB bills on a voluntary basis (until December 1994, this amount is decreased by the portion of voluntarily registered CNB bills used by banks to maintain the prescribed minimal liquidity).

Column 8 reports the monthly average of day-to-day balances of foreign currency CNB bills on a voluntary basis (in EUR and USD).

Column 9 reports the monthly average of day-to-day balances of kuna MoF treasury bills. Until September 2002, it shows the discounted value of treasury bills, while starting from October 2002, it shows their nominal value.

Relative significance ^a		–	–	73.02	67.59	29.39	38.20	35.85	2.35	5.43	2.29	3.14	

^a Relative significance is calculated as a percentage of corresponding credit category in total credits disbursed in the reporting month (according to data for the last period included in the table). Note: A break in the time series occurred due to changes in the methodology used in interest rate statistics as of 1 January 2001. This especially refers to interest rates shown in columns 5, 6 and 7. Interbank credits, which bear relatively low interest rates, were, among others, excluded from short-term credits to enterprises. The increase in interest rates was also caused by the weighting method: all categories are weighted by the amounts of newly-granted credits, except credit lines whose relative share grew in the new coverage, which are weighted by book balances.

Table G1: Banks' Interest Rates on Kuna Credits Not Indexed to Foreign Currency

The table contains the weighted averages of banks' monthly interest rates on kuna credits not indexed to f/c, reported on a yearly basis.

Up to December 2001, data refer to the weighted averages of banks' monthly interest rates on kuna credits not indexed to f/c granted to legal persons (which included enterprises, the public sector, financial institutions, non-profit institutions and non-residents) and households, reported on a yearly basis. Savings banks are not covered.

From January 2002 on, data refer to the weighted averages of banks' monthly interest rates on kuna credits not indexed to f/c granted only to enterprises (public and other) and households, reported on a yearly basis.

Up to February 1996, columns 3 and 4 show interest rates on the interbank money market, according to information published by the Zagreb Money Market (ZMM). From March 1996 to August 2002, interest rates on the money market were calculated as the weighted monthly averages of the weighted daily interest rates and shown sep-

arately for trading in overnight credits and trading in other credits on the ZMM. In the period between May 1998 and January 2001, the repayment of credits granted on the interbank overnight market was guaranteed by banks' required reserves with the CNB.

As from Bulletin No. 157 columns 3 and 4 contain the revised data for the period from September 2002 onward. From September 2002 on, interest rates on overnight credits and other credits are calculated as the weighted monthly averages of the weighted daily interest rates on interbank demand deposit trading.

Columns 5 through 13 show the weighted averages of banks' monthly interest rates classified by maturity and sectors. Interest rates on short-term credits to enterprises also include interest rates on callable loans.

Data on banks' interest rates on kuna credits not indexed to f/c are based on banks' periodic reports. The basis for the calculation of the weighted averages are amounts of credits bearing corresponding interest rates, which were disbursed during the reporting month, with the exception of interest rates on giro and current account credit lines, for which the weighted averages were calculated based on the balance of these loans at the end of the reporting month.

^a Relative significance is calculated as a percentage of corresponding credit category in total credits disbursed in the reporting month (according to data for the last period included in the table).

Table G2: Banks' Interest Rates on Kuna Credits Indexed to Foreign Currency and on Credits in Euros

The table contains the weighted averages of banks' monthly interest rates on kuna credits indexed to f/c and on credits in euros, reported on a yearly basis.

Up to December 2001, data refer to the weighted averages of banks' monthly interest rates on kuna credits indexed to f/c and on credits in euros (or German marks) granted to legal persons (which included enterprises, the public sector, financial institutions, non-profit institutions and non-residents) and households, reported on a yearly basis. Savings banks are not covered.

From January 2002 on, data refer to the weighted averages of banks' monthly interest rates on kuna credits indexed to f/c and on credits in euros granted only to enterprises (public and other) and households, reported on a yearly basis.

Data on banks' interest rates on kuna credits indexed to f/c and on credits in euros are based on banks' periodic reports. The basis for the calculation of the weighted averages are amounts of credits bearing corresponding interest rates, which were disbursed during the reporting month.

Columns 3 through 11 show the weighted averages of banks' monthly interest rates classified by maturity and sectors. Interest rates on short-term credits to enterprises also include interest rates on callable loans.

Up to December 2001, interest rates on credits in euros (columns 12, 13 and 14) refer to credits released in German marks in the reporting month, and starting from January 2002, they refer to credits released in euros, while the weighted averages are calculated based on their kuna equivalent using the current exchange rate. Credits released in other currencies are not included in this table.

Table G3: Banks' Interest Rates on Kuna Deposits Not Indexed to Foreign Currency

	March	1.80	0.40	2.07	2.10	4.44	1.18	1.95	5.42	1.37
Relative significance ^a		50.41	33.83	13.73	10.89	3.08	7.81	2.84	0.41	2.43

^a Relative significance is calculated as a percentage of corresponding deposit category in total deposits received in the reporting month (according to data for the last period included in the table).

Table G3: Banks' Interest Rates on Kuna Deposits Not Indexed to Foreign Currency

The table contains the weighted averages of banks' monthly interest rates on kuna deposits not indexed to f/c, reported on a yearly basis.

Up to December 2001, data refer to the weighted averages of banks' monthly interest rates on kuna deposits not indexed to f/c received from legal persons (which included enterprises, the public sector, financial institutions, non-profit institutions and non-residents) and households, reported on a yearly basis. Savings banks are not covered.

From January 2002 on, data refer to the weighted averages of banks' monthly interest rates on kuna deposits not indexed to f/c received from enterprises (public and other) and households, reported on a yearly basis.

Data on banks' interest rates on kuna deposits not indexed to f/c are based on banks' periodic reports.

Column 3 reports the weighted averages of monthly interest rates

on total kuna deposits (giro and current accounts, household savings deposits and time deposits) not indexed to f/c.

Column 4 shows the weighted averages of monthly interest rates on deposits in giro and current accounts not indexed to f/c received from enterprises (until December 2001, all legal persons) and households, and column 5 shows the weighted averages of monthly interest rates on total time deposits not indexed to f/c.

The basis for the calculation of the weighted averages for kuna time deposits not indexed to f/c are the amounts of those deposits received during the reporting month. The basis for the calculation of the weighted averages for deposits in giro and current accounts are the end-of-month book balances of those deposits. The averages of interest rates on total kuna deposits not indexed to f/c (column 3) are weighted by the end-of-month balances of all categories included in the calculation.

Kuna and foreign currency deposits used as collateral for credit are included, while restricted deposits (deposits used for payment of imports and other restricted deposits) are not included into the calculation of the weighted averages.

Table G4a: Banks' Interest Rates on Kuna Deposits Indexed to Foreign Currency and on Foreign Currency Deposits

weighted averages of monthly interest rates, in % on annual basis

Year	Month	Interest rates on savings and time deposits indexed to f/c			Interest rates on foreign currency deposits

February		3.40	2.78	4.39	3.71	0.18	0.22	0.16	0.10	0.07
March		3.52 ^b	2.73	2.63	3.57	0.18	0.21	0.16	0.09	0.07
Relative significance ^a		0.68	0.61	0.06	48.91	21.57	14.54	1.82	4.52	0.70

^a Relative significance is calculated as a percentage of corresponding deposit category in total deposits received in the reporting month (according to data for the last period included in the table).

^b Of the total amount of deposits to which this interest rate refers, 36.38% refers to enterprises.

Table G4a and b: Banks' Interest Rates on Kuna Deposits Indexed to Foreign Currency and on Foreign Currency Deposits

The table contains the weighted averages of banks' monthly interest rates on kuna deposits indexed to f/c and on foreign currency deposits, reported on a yearly basis.

Up to December 2001, data refer to the weighted averages of banks' monthly interest rates on kuna deposits indexed to f/c and on foreign currency deposits received from legal persons (which included enterprises, the public sector, financial institutions, non-profit institutions and non-residents) and households, reported on a yearly basis. Savings banks are not covered.

From January 2002 on, data refer to the weighted averages of banks' monthly interest rates on kuna deposits indexed to f/c and on foreign currency deposits received from enterprises (public and other) and households, reported on a yearly basis.

Data on banks' interest rates on kuna deposits indexed to f/c and on foreign currency deposits are based on banks' periodic reports.

Column 3 reports the weighted averages of monthly interest rates on total kuna savings and time deposits indexed to f/c received from enterprises (until December 2001, all legal persons) and households, whereas the weighted averages of monthly interest rates on time deposits are shown in column 4 (short-term deposits) and column 5 (long-term deposits) respectively.

Up to December 2001, interest rates on foreign currency deposits refer to deposits received in German marks or US dollars, and start-

ing from January 2002, they refer to deposits received in euros and US dollars, while the weighted averages are calculated based on their kuna equivalent using the current exchange rate. Deposits received in other currencies are not included in this table.

The basis for the calculation of the weighted averages for kuna time deposits indexed to f/c and foreign currency time deposits are the amounts of those deposits received during the reporting month. The basis for the calculation of the weighted averages for savings deposits indexed to f/c are the end-of-month book balances of those deposits. From January 2002 on, the averages of interest rates on total kuna deposits indexed to f/c (column 3) are weighted by the end-of-month balances of all categories included in the calculation.

The average interest rate on total foreign currency deposits (column 6) refers to the weighted average of monthly interest rates on savings and foreign currency time deposits, which are weighted by the end-of-month balances of all categories included in the calculation.

The basis for the calculation of the weighted averages of monthly interest rates on total foreign currency savings deposits (column 7) are the end-of-month balances of those deposits.

The basis for the calculation of the weighted averages of monthly interest rates on total foreign currency time deposits (column 12) are the amounts of those deposits received during the reporting month. The same basis is applied in calculating the weighted averages of monthly interest rates on total short-term foreign currency deposits (column 13) and on total long-term foreign currency deposits (column 18).

Table G4b: Banks' Interest Rates on Kuna Deposits Indexed to Foreign Currency and on Foreign Currency Deposits

Table G5: Banks' Trade with Foreign Exchange

Data on trade with foreign exchange between banks comprise the spot purchase and sale of foreign exchange in domestic foreign exchange market. Spot transactions are contracted obligations to buy/sell foreign currency within maximally 48 hours.

The transactions are classified by category of participants (legal and natural persons, domestic and foreign banks and the CNB). Sources of data are banks' reports on trading with foreign exchange and statistical data on external payment operations.

Other Croatian National Bank transactions include foreign exchange sales and purchases on behalf of the Ministry of Finance.

^a As from Bulletin No. 146 the CBRD is reclassified from the subsector central government funds to the subsector non-banking financial institutions. The reclassification covers the entire statistical series (from January 1999 onwards). Moreover, as from the same number of the Bulletin, CM is reclassified from the subsector central government funds to the subsector public enterprises. The reclassification covers the statistical series from January 2008 onwards. ^b Data also include the round tripping which increases direct investment in Croatia and direct investment abroad by the same amount. This type of direct investment was recorded in December 2008 (EUR 825.7m) and August 2009 (EUR 666.5m). ^c Preliminary data.

Note: The item net errors and omissions also comprises the counter-entry of a part of revenues from travel services which relates to such revenues not stated in the banks' records.

Table: H1-H6: Balance of Payments

The balance of payments of the Republic of Croatia represents a systematic overview of the value of economic transactions performed by the Croatian residents with foreign countries within a particular period. It is compiled in accordance with the recommendations of the International Monetary Fund (Balance of Payments Manual, Fifth Edition, 1993). Data sources include: 1. reports of the government institutions (Central Bureau of Statistics and Croatian Institute for Health Insurance), 2. special reports of the Croatian National Bank (International Transaction Reporting System (ITRS), external debt relations, monetary statistics and reserve assets) and 3. estimates and statistical research carried out by the Croatian National Bank.

Balance of payments of the Republic of Croatia data are reported in three currencies: in euros (EUR), US dollars (USD) and domestic currency (HRK). In all cases, the same data sources are used and the same principles regarding the scope of transactions and the procedures for compiling particular items are applied. Since the original data are reported in different currencies, the transaction values are converted from the original currency into the reporting currency by

applying the exchange rate from the CNB exchange rate list in one of the following manners:

- by applying the midpoint exchange rate on the date of the transaction;
- by applying the average monthly or quarterly midpoint exchange rate in the case the transaction date is not available;
- by applying the end-of-period exchange rate for the calculation of a change in the transaction value between the two periods; the end-of-period balances reported in the original currency serve as a basis for calculating the change in the original currency value, which is converted, by applying the average midpoint exchange rate in the observed period, into the value of change in the reporting currency.

The Report of the Central Bureau of Statistics on foreign trade in goods of the Republic of Croatia represents the basic data source for the balance of payments items related to exports and imports. These data are adjusted, in accordance with the recommended compilation method, for coverage and classification. Accordingly, goods exports and imports in the balance of payments are reported at f.o.b. parity. The value of exports at this parity is already contained in the previ-

^a Preliminary data.

ously mentioned CBS Report, whereas the value of imports f.o.b. is estimated on the basis of research studies of the CNB on the stratified sample of importers. The resulting value serves as a basis for the estimate of the share of transportation and insurance services by which the original value of imports c.i.f., stated in the CBS Report, is reduced. In the 1993-2001 period, this share stood at 7.10% (estimated only on the basis of the largest and large importers), while from 2002 on it has amounted to 3.73%. The same research study, conducted by the CNB at the end of 2006 (comprising the imports in the previous year), showed that the share of transportation and insurance costs, after continuing to decrease, has reached 3.03%. This share was first applied in the calculations for the first quarter of 2007. In the period from 1993 to 1996, the value of imports was modified by estimates of imports in duty free zones, which have been included in the merchandise trade statistics since 1997. From 1996 on, goods exports and imports are modified by the data on repairs on goods and goods procured in ports by carriers. In addition, since 1999, based on the Survey on Consumption of Foreign Travellers in Croatia and Domestic Travellers Abroad, the item of goods exports has been modified by the estimated value of goods sold to foreign travellers and tourists and taken out of the Republic of Croatia. The item of goods imports is adjusted for the estimated value of goods imported personally by the Croatian citizens from the neighbouring countries (shopping expenditures).

Transportation, travel and other services are reported separately under service account. Revenues and expenditures on the basis of transportation, in the 1993-1998 period, were adopted from the ITRS. From 1999 on, revenues and expenditures arising from transportation of goods and passengers, as well as the value of accompanying services, which together constitute the total value of these services, are compiled on the basis of the results of the Research on transactions related to international transportation services, carried out by the CNB. Owing to an exceptionally large population of road carriers, revenues and expenditures on the basis of road transportation are not adopted from this research. They are compiled by using ITRS data. As regards transportation of goods, expenditures are sup-

plemented by a portion of transportation and insurance costs related to imports of goods which belongs to non-residents and which is estimated by adjusting the value of imports at c.i.f. parity to the value of imports f.o.b.

Revenues from services rendered to foreign travellers and tourists, as well as expenditures incurred by domestic travellers and tourists abroad are shown under the position Travel. In the 1993-1998 period, this position was assessed by using various data sources which did not provide for a full coverage in accordance with the recommended methodology. Accordingly, in the second half of 1998, the Croatian National Bank started to carry out the Survey on Consumption of Foreign Travellers in Croatia and Domestic Travellers Abroad and use its results for compiling the Travel position. Since early 1999, the results of this Survey, based on carrying out a survey of travellers (stratified sample) at border crossings, have been combined with the Ministry of the Interior data on total number of foreign and domestic travellers, along with the data on distribution of foreign travellers by countries contained in the CBS Report on tourism, in order to assess the corresponding balance of payment items.

Other services position is compiled by using different data sources: apart from revenues and expenditures related to insurance and communication services, which have been determined by the CNB special statistical research since 2001, the values of all other services are adopted from the ITRS.

Transactions in the income account are classified into four main groups. Compensation of employees item is compiled on the basis of the ITRS. Income from direct investment, portfolio investment and other investment are reported separately. Data on reinvested earnings are reported separately, under direct investment income, calculated on the basis of the CNB Research on direct and other equity investment. In contrast to data on dividends, these data are not available for the 1993-1996 period, since at that time they were not reported separately. From the first quarter of 2009 on, international standards are applied in the statistical monitoring of reinvested earnings, meaning that reinvested earnings are reported on a quarterly basis, i.e. in the period in which the profit is actually earned. Previously,

^a Preliminary data.

reinvested earnings were reported in the month in which the decision on the distribution of the previous year's profit was adopted, meaning that they were based on the profit earned in the preceding year. On the basis of statistical data on external debt relations, starting from 1997, income from direct investment includes data on interest arising from credit relations between residents and non-residents directly related through ownership. Income from equity portfolio investment is compiled on the basis of the same research, whereas data on debt portfolio investment income have been compiled since 1999, based on statistics on foreign credit relations, which also encompass income related to debt securities owned by non-residents. Income from other investments includes the calculation of interest in accordance with the foreign credit relations statistics. The methodology for compiling the statistics on debt investment income has been changed in 2007 to include the reporting of income on an accrual basis. This basically means that income from debt investment and interest are reported at the point in time when they accrue and not at the point in time when they mature or when they are paid. As a result, the historical data for the 1999-2006 period have been revised.

Current transfers are reported separately for the general government sector and other sectors. The ITRS is used as the main data source on current transfers for both sectors. In addition to taxes and excise duties, pensions, monetary support and donations, which are included in current transfers of both sectors, the government sector also encompasses data on multilateral cooperation, whereas other sectors include data on workers' remittances. Current transfers of the general government sector also include data on exports and imports of goods without a payment obligation, provided by the CBS. In the 1993-1998 period, current transfers of other sectors also encompassed an estimate of unregistered foreign currency remittances, which accounted for 15% of the positive difference between unclassified inflows and outflows of the household sector. From 1993 to the second quarter of 1996, the CNB also assessed a portion of the outflow based on current transfers. From 2002 on, inflows and outflows based on current transfers of other sectors are supplemented by the data of the CNB special statistical research on international

transactions related to insurance services.

Capital account is compiled on the basis of the ITRS, particularly on their part related to transfers of migrants. In addition, capital account includes transfers that cannot be classified into current transfers, such as allocation of gold of the former SFRY or investments in patents and rights.

Foreign direct investments include equity capital, reinvested earnings and debt relations between ownership-related residents and non-residents. Direct investments are investments whereby a foreign owner acquires a minimum of 10% interest in equity capital of a company, regardless of whether a resident invests abroad or a non-resident invests in Croatian residents. The CNB Research on foreign direct investments started in 1997 when companies included in the survey also delivered data on direct investments for the 1993-1996 period. For the same period, no data are available on reinvested earnings and other capital under direct investment position, where all debt relations between related residents and non-residents are classified (excluding the banking sector). Such data actually became available only after the stated research has been launched. Since 1999, data on debt relations within direct investments have been collected on the basis of external debt relations statistics. From 2007 on, the CNB Statistics Department conducts the research on the purchase and sale of the real estate by non-residents on the territory of the Republic of Croatia. Persons obliged to submit reports are the public notaries who learn about these transactions in the course of their business. Data on the purchase and sale of the real estate by Croatian residents abroad are compiled on the basis of the ITRS. These purchase and sale transactions are also a constituent part of direct investments.

Data on equity portfolio investments are collected from the same data source as the data on direct investments. Debt portfolio investments include all investments in short-term and long-term debt securities that cannot be classified under direct investments. In the 1997-1998 period, these data were collected through the CNB Research on direct and portfolio investments, and since 1999 data on external debt relations and monetary statistics data for bank investment have

^a As from Bulletin No. 146 the CBRD is reclassified from the subsector central government funds to the subsector non-banking financial institutions. The reclassification covers the entire statistical series (from January 1999 onwards). Moreover, as from the same number of the Bulletin, CM is reclassified from the subsector central government funds to the subsector public enterprises. The reclassification covers the statistical series from January 2008 onwards. ^b Data also include the round tripping which increases direct investment in Croatia and direct investment abroad by the same amount. This type of direct investment was recorded in December 2008 (EUR 825.7m) and August 2009 (EUR 666.5m). ^c Preliminary data.

been used. Starting from 2002 and 2004, this position has also been compiled for investment funds and pension funds, respectively.

Other investment encompasses all other debt investments that have not been mentioned, apart from investment constituting reserve assets. Other investments are classified by instruments, maturity and sectors. Trade credits, in the 1996–2002 period, included the CNB estimates of advance payment and deferred payments, made on the basis of the sample of the largest and large importers and exporters. Data on advance payments have been estimated since 1996, while data on short-term deferred payments (first up to 90 days, then up to 150 days, and today from 8 days to 1 year) have been

collected since 1999. In 2003, this research was replaced by a new one, where the selected companies, regardless of their size (stratified sample), are obliged to submit data. Data on deferred payments with the original maturity of more than one year are adopted from the CNB foreign credit relations statistics. Credits granted by residents to non-residents, i.e. foreign loans utilised by residents and granted by non-residents, which cannot be classified into direct investments or trade credits, are classified by the institutional sector and maturity under the corresponding positions of other investment. The CNB foreign credit relations statistics represent the data source for these positions. Currency and deposit position shows residents' claims on

^a As from Bulletin No. 146 the CBRD is reclassified from the subsector central government funds to the subsector non-banking financial institutions. The reclassification covers the entire statistical series (from January 1999 onwards). Moreover, as from the same number of the Bulletin, CM is reclassified from the subsector central government funds to the subsector public enterprises. The reclassification covers the statistical series from January 2008 onwards. ^b Preliminary data.

Note: The item net errors and omissions also comprises the counter-entry of a part of revenues from travel services which relates to such revenues not stated in the banks' records.

foreign countries for foreign cash and deposits with foreign banks, as well as obligations of the Croatian banks for deposits owned by non-residents. Monetary statistics represent a data source for the general government sector and banks sector. Data on balance and currency structure of foreign assets and liabilities, contained in monetary statistics, are used to assess transactions from which the exchange rate effect was eliminated. In the 1993-1998 period, data on other sectors' claims under this position were compiled on the basis of the CNB estimate of a portion of net foreign currency inflows of the household sector which is not classified under current transfers.

Since 1999, this position has included only the data based on the Bank for International Settlement quarterly data, while data in the fourth quarter of 2001 and in the first two quarters of 2002 relate to the effect of the EMU countries' currencies changeover to the euro.

In the period from 1993 to 1998, the estimate of reserve assets transactions was made by converting the changes in the original currencies into the US dollars by applying the average monthly exchange rate of the currencies contained in the reserves. Since 1999, the changes in reserve assets balance have been calculated on the basis of the CNB accounting data.

^a International reserves of the Republic of Croatia consist only of the Croatian National Bank's foreign currency reserves. ^b Preliminary data.**Table H7: International Reserves and Banks' Foreign Currency Reserves**

Data on the international reserves of the Croatian National Bank are compiled in accordance with the methodology set out in the Balance of Payments Manual (International Monetary Fund, 1993), and include those foreign claims of the Croatian National Bank that can be used to bridge imbalances in international payments. International

reserves include special drawing rights, reserve position in the Fund, gold, foreign currency and deposits with foreign banks, as well as bonds and debt instruments.

The foreign currency reserves of banks include foreign currency and deposits of domestic banks with foreign banks. These foreign currency reserves represent an additional source of liquidity for bridging imbalances in international payments.

Table H8: International Reserves and Foreign Currency Liquidity

International reserves and foreign currency liquidity are shown in accordance with a Template on international reserves and foreign currency liquidity, drawn up by the IMF. A detailed explanation of the Template is given in “International Reserves and Foreign Currency Liquidity – Guidelines for a Data Template, 2001”.

The first part of the Template shows total assets of the Croatian National Bank in convertible foreign currency. Official reserve assets (I.A.) show those types of assets that are readily available to the CNB at any moment for bridging imbalances in international payments. Official international reserves include: short-term foreign negotiable debt securities, foreign cash, foreign currency sight deposits, foreign currency time deposits which can be withdrawn before maturity, foreign currency time deposits with a remaining maturity of up to 1 year, reserve position with the IMF, special drawing rights, gold, and reverse repos with foreign negotiable debt securities.

The second part of the Template shows fixed predetermined foreign currency net liabilities of the Croatian National Bank and the central government (excluding central government funds) that fall due in the next 12 months. Foreign currency loans, securities and deposits (II.1.) include future interest payments on banks’ foreign currency reserve requirements with the CNB (only interest payments for the next month are included), payments of future maturities of foreign currency CNB bills, future principal and interest payments on

loans from the IMF, and future principal and interest payments on the central government’s foreign currency debts (excluding central government funds). Aggregate short and long positions in forwards and futures in foreign currencies (II.2.) include future collections () or payments (–) arising from currency swaps between the CNB and domestic banks (temporary sale or purchase of foreign currency). Item Other (II.3.) includes future payments arising from repo transactions with foreign negotiable debt securities.

The third part of the Template shows predetermined contingent foreign currency net liabilities of the Croatian National Bank and the central government (excluding central government funds), which fall due in the following 12 months. Contingent liabilities in foreign currency (III.1.) include future principal and interest payments on foreign loans guaranteed by the central government, and banks’ foreign currency reserve requirements with the CNB. (The inclusion of reserve requirements in foreign currency is based on the assumption that there will be no changes in ratios or in the base of foreign currency reserve requirements, which comprises foreign currency sources of funds, including ordinary foreign currency accounts, special foreign currency accounts, foreign currency accounts and foreign currency sight deposits, received foreign currency deposits and received foreign currency loans, as well as obligations arising from securities issued in foreign currency (excluding banks’ equity securities) and hybrid and subordinated instruments). Undrawn credit lines show potential inflows (+) or outflows (–) which would arise

The fourth part of the Template lists memo items. Short-term, domestic currency debt indexed to foreign currency (IV.(a)) shows obligations arising from the Act on Converting Households' Foreign Currency Deposits into the Public Debt of the Republic of Croatia, which fall due in the next 12 months. Pledged assets (IV.(c)) show time deposits in foreign currency with a maturity over 3 months listed in item I.B. which are also used as collateral. Repo transactions with securities show the value of collateral that is subject to repo and reverse repo transactions with securities as well as how these transactions are registered in the Template.

Table H9: Midpoint Exchange Rates of the Croatian National Bank (period average)

The annual averages of CNB midpoint exchange rates are calculated based on the midpoint exchange rates effective on the working

days in a year, using CNB exchange rate lists whose application dates pertain to the calculation period.

The monthly averages of CNB midpoint exchange rates are calculated based on the midpoint exchange rates effective on the working days in a month, using CNB exchange rate lists whose application dates pertain to the calculation period.

The data show the annual and monthly averages of CNB midpoint exchange rates for selected currencies from 1992 to date, in kuna terms. The averages related to the calculation periods from the beginning of 1992, when the legal tender in the Republic of Croatia was the Croatian dinar, until the introduction of the kuna on 30 May 1994, are shown in kuna equivalent, and are denominated by dividing their values by one thousand (1,000).

The annual and monthly averages of midpoint exchange rates for the euro from 1992 until end 1998 are the averages of midpoint exchange rates applied for the ECU.

Table H10: Midpoint Exchange Rates of the Croatian National Bank (end of period)

The table shows CNB midpoint exchange rates applied on the last day of the observed period.

The data show CNB midpoint exchange rates for selected currencies from 1992 to date, in kuna terms. The end of period midpoint

exchange rates related to the periods from the beginning of the time series in 1992 until the introduction of the kuna on 30 May 1994 are shown in kuna equivalent and are denominated by dividing their values by one thousand (1,000).

The midpoint exchange rates for the euro applied on the last days of the observed periods from 1992 until end 1998 are the end of period midpoint exchange rates applied for the ECU.

Table H11: Indices of the Effective Exchange Rate of the Kuna

indices 2005 = 100

Year	Month	Nominal effective exchange rate of the kuna	Real effective exchange rate of the kuna; deflator	
			Consumer price index	Producer price index
1996	December	92.67	104.56	99.92
1997	December	96.27	106.16	102.55
1998	December	100.26	105.40	106.31

	March	96.17	90.87 ^a	90.83 ^a
	April	96.39		

^a Preliminary data.**Table H11: Indices of the Effective Exchange Rate of the Kuna**

The index of the nominal effective exchange rate of the kuna is a weighted geometric average of the index of bilateral nominal exchange rates of the kuna versus the euro, US dollar, Swiss franc and pound sterling. The basic CNB methodology for the calculation of both the nominal and real effective exchange rates of the kuna is described in Box 2 in the CNB Bulletin No. 64 (October 2001) and was first modified in 2004 (see the CNB Bulletin No. 94, June 2004). Starting with the CNB Bulletin No. 157 (March 2010), the presented time series of indices of the effective exchange rates of the kuna have been calculated based on the weights reflecting the structure of the current account (ITRS data) in the period from January 2006 to December 2009. The euro was assigned a 77.6% weight, the US dollar a 20.6% weight, the pound sterling a 0.9% weight and the Swiss franc a weight of 0.8%. The time series of basic indices were recalculated on the basis of 2005.

The index of the nominal effective exchange rate is an aggregate

indicator of the average value of the domestic currency against a basket of currencies. An increase in the index of the nominal effective exchange rate of the kuna in a certain period indicates that the kuna has depreciated against the basket of currencies and vice versa. The index of the real effective exchange rate is a weighted geometric average of the index of bilateral exchange rates of the kuna adjusted for the corresponding indices of relative prices (the ratio of price indices in partner countries and domestic prices). Producer price indices, consumer price indices and the total harmonised consumer price index for the eurozone countries are used as deflators. The time series for consumer prices in Croatia is constructed in the following manner: retail price indices are used for the period until and including December 1997 and consumer price indices for the period as of January 1998. Data for the last two months are preliminary. The historical data may be corrected for the subsequent changes in the data published by the statistical offices of the countries whose prices are included in the calculation of the index of the real effective exchange rate of the kuna.

^a Data include the growth in the direct investment debt which comprises the round tripping and which in turn increased the external debt of the Republic of Croatia. The stated investments in the Republic of Croatia were realised through the conclusion of credit transactions in December 2008 (EUR 825.7m) and August 2009 (EUR 666.5m). ^b The relevant comparable data as at 31 December 2007, published in Bulletin No. 146, should be used for the calculation of the external debt growth rate in 2008. ^c From January 2008 on, the data of non-financial enterprises are estimated on the basis of the data collected from the sample. ^d From January 2009 on, the data of non-banking financial institutions and non-financial enterprises are processed with the help of the new reporting system (INOK) which uses market interest rates to calculate the balance and the schedule of interest payments. The comparable balance as at 31 December 2008 has been calculated by applying the same methodology.

Table H12: Gross External Debt by Domestic Sectors

External debt is defined as the external debt liabilities of residents on the basis of debt securities issued in the foreign markets (at face value), credits (repo agreements included) regardless of their contractual maturity, deposits of non-residents, and trade credits granted by non-residents with contractual maturity of more than 180 days (90 days up to 11 July 2001 and 150 days up to 31 December 2002).

External debt by domestic sectors is shown in the same manner as in the Capital and Financial Account of the BOP. Item Government shows the external debt of the general government, comprising the Republic of Croatia, central government funds (including the State Agency for Deposit Insurance and Bank Rehabilitation, the Croatian Roads and, until 31 December 2007, the Croatian Motorways; from this date on, the Croatian Motorways is shown within the subsector public enterprises under item Other sectors), and local government. Item Croatian National Bank shows the debt of the central bank. Item Banks shows the debt of banks. Item Other sectors shows the debt of other banking institutions, non-banking financial institutions (including the Croatian Bank for Reconstruction and Development), enterprises, non-profit institutions and households, including craftsmen. Item Direct investment shows borrower – lender transactions of other sectors that are interrelated by ownership (borrower or lender owns more than 10% of the other).

Each sector data are further shown by contractual (short-term or long-term) maturity and by debt instrument. From the beginning of 2004, instruments included in item Currency and deposits (3. Banks) are reported in accordance with their maturity. Data for the previous periods are reported only on a long-term basis.

Outstanding gross external debt includes principal and interest arrears, as well as accrued interest and future principal payments.

Outstanding debt data are shown at the CNB's midpoint exchange rate at the end of the period.

Data are considered preliminary until after publication of the final BOP data for the reporting quarter.

Table H13: Public Sector Gross External Debt, and Publicly Guaranteed and Non-Publicly Guaranteed Private Sector Gross External Debt

The gross external debt position presented in this Table highlights the role of the public sector.

Public sector includes the general government (comprising the Republic of Croatia, central government funds and local government), the central bank, public enterprises, mixed enterprises and the CBRD. Public enterprises are defined as enterprises in 100% ownership of business entities from the public sector. Mixed enterprises are defined as enterprises in which business entities from the public sector have a share larger than 50%.

Publicly guaranteed private sector gross external debt is defined as the external debt liabilities of business entities not covered by the definition of the public sector, the servicing of which is guaranteed by a business entity from the public sector.

Non-publicly guaranteed private sector gross external debt is defined as the external debt liabilities of business entities not covered by the definition of the public sector, the servicing of which is not guaranteed by the public sector.

Items are valued in the same manner as in Table H12.

^a The direct investment-related debt went up by EUR 1,548.4m at end-February due to the inclusion of data on round-tripping transactions.

Table H14: Gross External Debt by Domestic Sectors and Projected Future Payments

The Table shows outstanding gross external debt, projected principal payments and estimated interest payments according to the CNB's midpoint exchange rate at the end of the period. Principal payments on Currency and deposits of non-residents are projected according to the available monetary statistics data on original and remaining maturity.

Estimated interest payments do not include interest on deposits from non-residents, repo transactions and hybrid and subordinated instruments, as well as late interest on these instruments. Future interest payments are estimated on the basis of contractual interest rates and do not reflect changes of variable interest rates.

Projected payments of accrued interest, which are an integral part of the gross external debt, increase the projected principal payments in the first quarter period and, consequently, decrease the interest payments estimated for the same period.

^a The relevant comparable data as at 31 December 2007, published in Bulletin No. 146, should be used for the calculation of the external debt growth rate in 2008. ^b From January 2008 on, the data of non-financial enterprises are estimated on the basis of the data collected from the sample. ^c From January 2009 on, the data of non-banking financial institutions and non-financial enterprises are processed with the help of the new reporting system (INOK) which uses market interest rates to calculate the balance and the schedule of interest payments. The comparable balance as at 31 December 2008 has been calculated by applying the same methodology.

^a As from Bulletin No. 146 the CBRD is reclassified from the subsector central government funds to the subsector non-banking financial institutions. The reclassification covers the entire statistical series (from December 1998 onwards). Moreover, as from the same number of the Bulletin, CM is reclassified from the subsector central government funds to the subsector public enterprises. The reclassification covers the statistical series from January 2008 onwards. ^b Data also include the round tripping which increases direct investment in Croatia and direct investment abroad by the same amount. This type of direct investment was recorded in December 2008 (EUR 825.7m) and August 2009 (EUR 666.5m). Accordingly, they impact the stock of direct investment in Croatia and direct investment abroad from these months onwards. ^c Preliminary data.

Table H16: International Investment Position

This table is made in accordance with the recommendations of the IMF (Balance of Payments Manual, Fifth Edition, 1993). Data sources include: reports from banks, enterprises, the Croatian National Bank, and the Zagreb Stock Exchange (ZSE).

Data on international investments of the Republic of Croatia and international investments into the Republic of Croatia are recorded in euros (EUR) and US dollars (USD). Depending on the sources of data available, the conversion of values from the original currencies into the reporting currencies is performed:

- by applying the current rate of exchange or the average monthly midpoint exchange rate of the Croatian National Bank to transactions;
- by applying the midpoint exchange rate of the Croatian National Bank on the reporting date to balances.

The source of data on foreign direct and portfolio equity investment is the statistical research of the Croatian National Bank. The equity investments have been monitored since the beginning of 2001 and are corrected for changes in the official index of the Zagreb Stock Exchange (CROBEX).

Portfolio debt investment and other investment are classified according to the following institutional sectors: the Croatian National Bank, government, banks and other sectors. The government sector comprises the central government and funds and local government authorities. The banking sector comprises banks.

Item Portfolio debt investment – Assets and liabilities comprises data on investments of residents into debt securities issued by non-

residents (assets) and investments of non-residents into debt securities issued by residents (liabilities). The source of data is the register of foreign credit relations kept by the Croatian National Bank, which also comprises claims and liabilities arising from bonds and money market instruments.

Item Other investment – Trade credits – Assets and liabilities comprises foreign claims and foreign liabilities of the said sectors arising from trade credits. The source of data is the register of foreign credit relations kept by the Croatian National Bank.

Item Other investment – Loans – Assets and liabilities comprises data on loans granted and received between residents and non-residents classified according to institutional sectors. The source of data is the register of foreign credit relations kept by the Croatian National Bank.

Item Other investment – Currency and deposits – Assets shows the total liquid foreign currency assets of banks authorised to do business abroad reduced by the amount of foreign currency deposited by banks with the CNB in fulfilment of a part of their reserve requirements. In addition to banks' foreign claims, foreign claims of the government sector are also shown. The sources of data are reports from the government and banks.

Item Other investment – Currency and deposits – Liabilities shows the total foreign currency and kuna liabilities of the said sectors abroad arising from current accounts, time and notice deposits, sight deposits and demand deposits. The sources of data for this item are reports from banks.

Item International reserves of the CNB is compiled on the basis of the CNB Accounting Department reports which contain data on their balances and changes.

^a As from Bulletin No. 146 the CBRD is reclassified from the subsector central government funds to the subsector non-banking financial institutions. The reclassification covers the entire statistical series (from December 1998 onwards). Moreover, as from the same number of the Bulletin, CM is reclassified from the subsector central government funds to the subsector public enterprises. The reclassification covers the statistical series from January 2008 onwards. ^b Preliminary data.

^a As from Bulletin No. 146 the CBRD is reclassified from the subsector central government funds to the subsector non-banking financial institutions and CM is reclassified from the subsector central government funds to the subsector public enterprises. The debt of the CBRD, presented in this table under headings 2. External debt of central government and 1. Domestic debt of central government, is reclassified from December 1998 and June 1999 onwards respectively, and the debt of CM is reclassified from January 2008 onwards.

Table I3: Central Government Debt

As from Bulletin No. 154 the table contains the revised data.

The central government debt comprises the domestic and external debt.

The domestic debt of the central government is compiled from the MoF data on T-bills and bonds and the CNB data on money market instruments, credits from banks and credits from the CNB.

The stock of T-bills includes MoF T-bills denominated in kuna, eurobills and T-bills indexed to the euro with a maturity of up to one year. The stock of eurobills includes accrued interest. The difference between the nominal value and the issue value of T-bills denominated in kuna and of T-bills indexed to the euro is the accrued interest which is distributed over the life of instruments using the simple interest calculation method (i.e. in a linear manner) and the method of calculating the number of days where the actual number of days is divided by 360.

The stock of bonds includes central government bonds issued in the domestic market, MoF T-bills with a maturity of over one year and a share of total central government bonds issued in the foreign market which is held by resident institutional units at the end of the reporting period. The difference between the nominal value and the

issue value of T-bills with a maturity of over one year is the accrued interest which is distributed over the life of instruments using the compound interest calculation method. The stock of central government bonds includes accrued interest.

From January 2004 onwards, the stock of credits from banks includes both outstanding principal and accrued interest.

The external debt statistics compiled by the CNB is the source of data on the central government external debt.

The supplement contains the data on the central government guaranteed debt. Bank statistical reports are the source of data on domestic debt guarantees, while the external debt statistics compiled by the CNB is the source of data on external debt guarantees.

Irrespective of the notes under the heading “Classification and Presentation of Data on Claims and Liabilities”, the debt of the Croatian Roads, the Croatian Motorways and the State Agency for Deposit Insurance and Bank Rehabilitation, presented in this table under headings 2. External debt of central government and 1. Domestic debt of central government, has been reclassified from the subsector Republic of Croatia to the subsector central government funds from December 1998 and December 2002 onwards respectively.

Table J1: Consumer Price and Producer Price Indices

The Central Bureau of Statistics (CBS) introduced the consumer price index (CPI) in early 2004. This indicator of price movements was compiled in accordance with the methodological principles laid down by the ILO and Eurostat. In its First Release, issued on 17 February 2004, the CBS published the data on movements in the CPI in January 2004 and the time series for the CPI as of January 2001. The CBS subsequently constructed the time series for the con-

sumer price index encompassing the period from January 1998 to December 2000. As expected following the introduction of the new index, the CBS ceased to publish the retail price index (RPI) and the cost of living index, whose calculation methodologies have not been adequately harmonised with internationally accepted standards. The main features of the CPI are described in the CNB Bulletin No. 91 (see Box 1). The data on the average year-on-year consumer price inflation rate are shown in the Bulletin table on Economic Indicators.

^a Since January 2007, the CPI has been calculated and published by the CBS on the new base 2005 = 100. Source: CBS.

Table J2: Core Consumer Price Indices

The core consumer price index is calculated by the Central Bureau of Statistics (CBS) in the manner that agricultural products prices and administrative prices (which among others include the prices of electricity and refined petroleum products) are excluded

from the basket of goods and services used in the calculation of the total index. These two groups of products accounted for a total of 30.06% in the basket in 2005 (agricultural products 6.93 percentage points, and administrative products 23.13 percentage points). A total of 111 goods and services are excluded from the coverage of the CPI basket and assigned a zero weight.

Table J4: Consumer Confidence Index, Consumer Expectations Index and Consumer Sentiment Index

The CNB Consumer Confidence Survey has been carried out regularly since April 1999 in accordance with the methodology of the European Commission, the Joint Harmonised EU Programme of Business and Consumer Surveys. Until April 2005, the CNB conducted the survey once a quarter (in January, April, July and October). As of May 2005, the CNB carries out the survey in monthly frequency in cooperation with the European Commission, using its technical and financial assistance. The Croatian National Bank bears sole responsibility for the creation and conduct of the survey.

The questionnaire contains 25 questions, examining consumer perception of the changes as regards every-day economic issues. The value of the response index is determined in line with the set methodology, based on the responses to the questions from the Consumer Confidence Survey. The movements of three composite indices, consumer confidence index (CCI), consumer sentiment index (CSI) and consumer expectations index (CEI), are calculated and monitored based on the value of the response indices. Each of the said composite indices is calculated as the arithmetic average of the response indices (I), i.e. as the average of previously quantified responses to individual questions from the survey:

$$I_i = \sum_z^k r_i \cdot w_i$$

where: r is the value of the response, w is the share of respondents opting for a particular response (weight), i question from the ques-

tionnaire, z is the offered/chosen response, k is the number of offered responses to a particular question.

The value of the said indices ranges $-100 < I_i < 100$. Higher index values than those recorded over the previous period point to an increase in expectations (optimism) as regards the specific segment covered by the particular question.

The table shows the values of chosen response indices for the following questions:

I1: How has the financial situation of your household changed over the last 12 months?

I2: How do you expect the financial position of your household to change over the next 12 months?

I3: How do you think the general economic situation in Croatia has changed over the past 12 months?

I4: How do you expect the general economic situation in Croatia to develop over the next 12 months?

I7: How do you expect the number of people unemployed in Croatia to change over the next 12 months?

I8: In view of the general economic situation, do you think now is the right moment for people to make major purchases such as furniture, electrical/electronic devices, etc.?

I11: Over the next 12 months, how likely is it that you will save any money?

The components of composite indices are as follows:

CCI: I2, I4, I7×(-1), I11

CEI: I2, I4

CSI: I1, I3, I8.
