Information on Economic Trends

Real Sector

GDP grew by 5.2% in real terms in 2002 compared with 2001. This strong economic growth was mostly influenced by strong domestic demand, which was especially pronounced in the second half of the year.

The real annual growth rate of GDP stood at 6.3% in the fourth quarter of 2002. However, the quarterly growth rate of 0.6% points to a slight slowdown in comparison with the previous quarter. The impact of individual components of aggregate demand on economic growth registered in the last quarter of 2002 corresponded to that from the third quarter. It encompassed a strong positive contribution of domestic demand and a significant negative influence of net foreign demand.

Following unexpectedly strong consumption in the summer months, personal consumption continued to grow steadily

in the fourth quarter of 2002 and rose by 2.7% in comparison with the previous quarter. Its real annual growth rate stood at 6.6% and thus it made the strongest contribution to GDP growth in 2002. Gross fixed capital formation registered the highest real growth in 2002, 10.0%. The largest portion of this growth resulted from increased government capital expenditure channeled into highway construction. On the other hand, the downward trend in fiscal expenditures continued for the third consecutive year, and the government current expenditure fell by 1.8% in real terms in 2002 in comparison with 2001.

Goods imports also grew on account of strong domestic demand, which was especially pronounced in the second half of the year. Expressed in real terms, imports of goods and services grew by 8.8% in 2002 in comparison with 2001. In this period, exports rose by only 1.7% as a result of stagnant goods exports and a negligible increase in exports of services.

In accordance with the production approach to GDP mea-

Figure 1

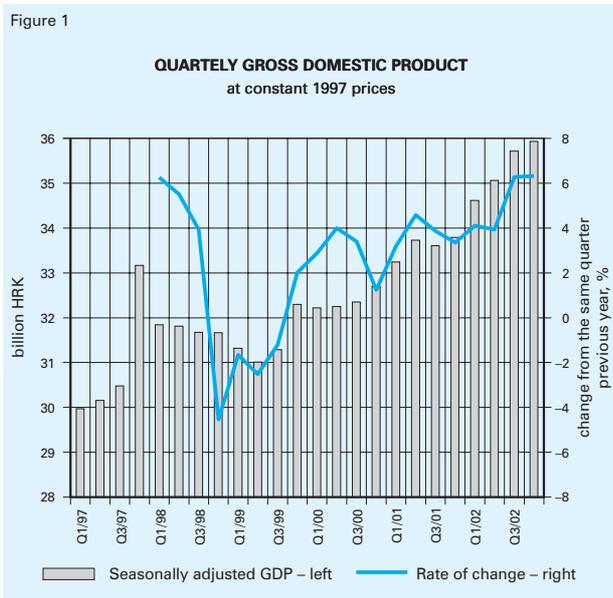

Figure 3

Figure 2

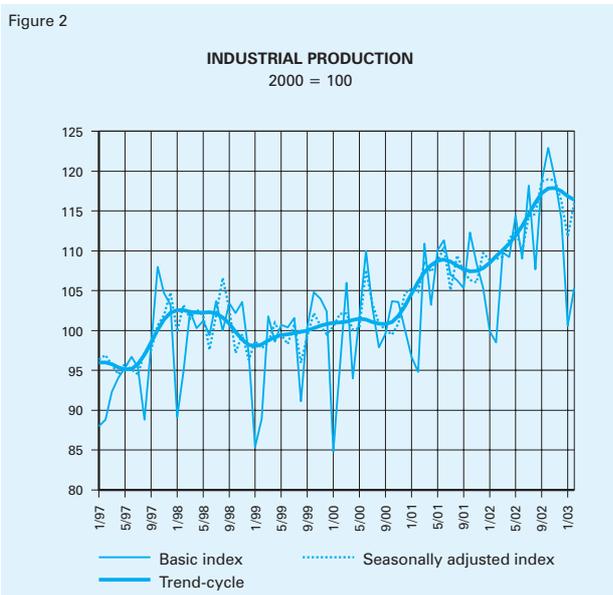

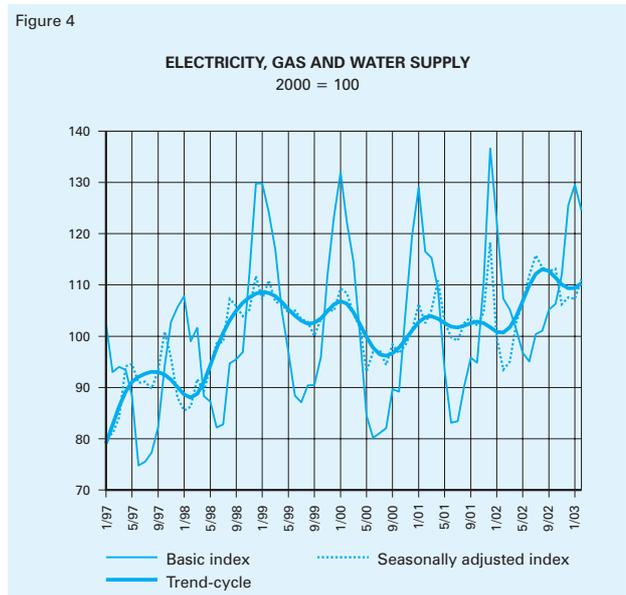

Figure 4

surement, the strongest gross value added growth was registered in trade and construction in 2002. In addition, the financial sector and industry also made a considerable contribution to the growth in total gross value added.

With the real annual growth rate of 12.7% in 2002, the contribution of wholesale and retail trade to the growth in total gross value added was the strongest. However, the upward trend in gross value added in wholesale and retail trade slowed down in the fourth quarter of 2002, which is evidenced by a decrease in its quarterly growth rate.

Construction, whose real growth of gross value added stood at 13.9%, registered the highest growth rate in 2002. This was to a large extent the result of large infrastructure projects carried out throughout the year.

Gross value added in the three largest sections of industrial production (mining and quarrying, manufacturing and electricity, gas and water supply) grew by a total of 4.0% in real terms in 2002 in comparison with 2001. The strong upward

trend was registered in the third and fourth quarters of 2002 when these sections boosted total gross value added. The real annual growth rate of gross value added in these sections stood at 6.2% in the second half of 2002.

Real gross value added in the hotels and restaurants sector increased by 7.5% in 2002 in comparison with 2001 when the annual growth rate stood at 5.7%. This indicator is the confirmation of good tourist season, in which nights stayed rose by 6.3% in comparison with 2001. The number of nights stayed by tourists from the West European countries grew significantly, while the number of nights stayed by tourists from the East European countries fell. It should also be noted that bad weather conditions in August and September and severe floods in the neighboring countries probably decreased the number of tourist arrivals from these countries in resorts on the Adriatic Coast.

Gross value added in transport, storage and communication grew by 6.8% in 2002 in comparison with 2001. The

Figure 5

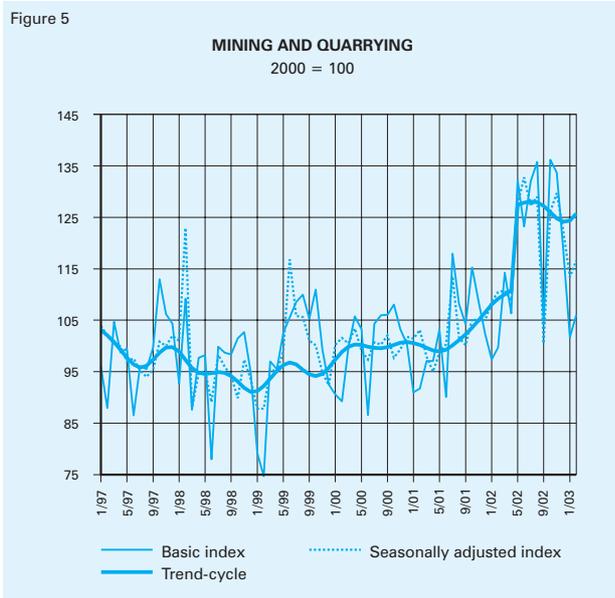

Figure 7

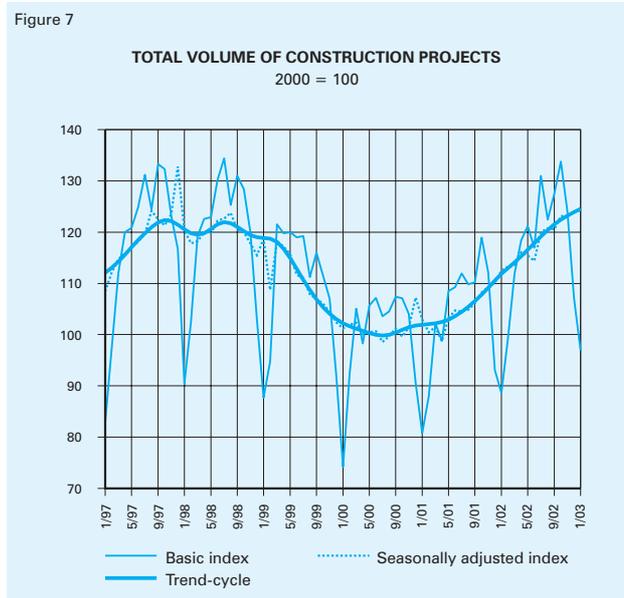

Figure 6

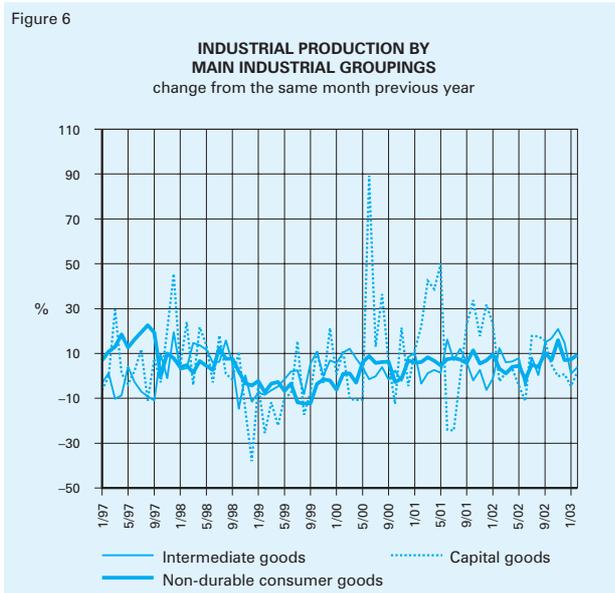

Figure 8

Figure 9

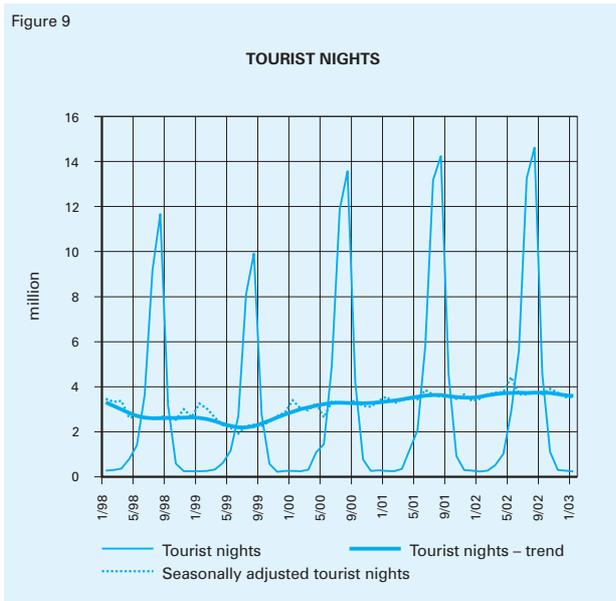

Figure 10

strongest growth rate, as in previous years, was registered in telecommunication services. Transport underwent no significant changes in 2002, i.e. transports of goods rose slightly, and transport of passengers fell moderately in comparison with 2001.

The trend present at the end of 2002 continued into early 2003. The upward trend in retail trade has continued to slow down as a result of reduced consumption and a fact that the impact of extension of the retail trade statistical coverage to include new chain stores has been weakening. Accordingly, real retail trade turnover grew at an annual rate of 7.0% in January. Concurrently, construction continued its upward trend. The total volume of construction projects rose by 10.5% in January 2003 in comparison with January 2002. Moreover, a strong growth in this activity is expected in 2003 as well.

In the first two months of 2003, the annual growth rate of the total volume of industrial production was 4.6%. On account of colder weather, energy supply grew the most, with the annual rate of change of 13.0%. Highway construction is still the reason behind increased mining of ores and quarrying of stone. Manufacturing grew at a rate of 4.1%, which equals that registered in 2001. The strongest growth rates were registered in publishing and printing, manufacture of fabricated metal products and manufacture of food products and beverages. According to the main industrial groupings, non-durable consumer goods and energy grew the most (8.4% and 6.4% respectively), while manufacture of capital goods was the only grouping to record a fall.

Employment and Wages

Registered unemployment continued to decrease in February. The number of persons registered with the CEI was almost 52,000 or 12.5% less at end-February compared with the same month last year. Employment growth contributed to a reversal of the trend in registered unemployment, com-

Figure 11

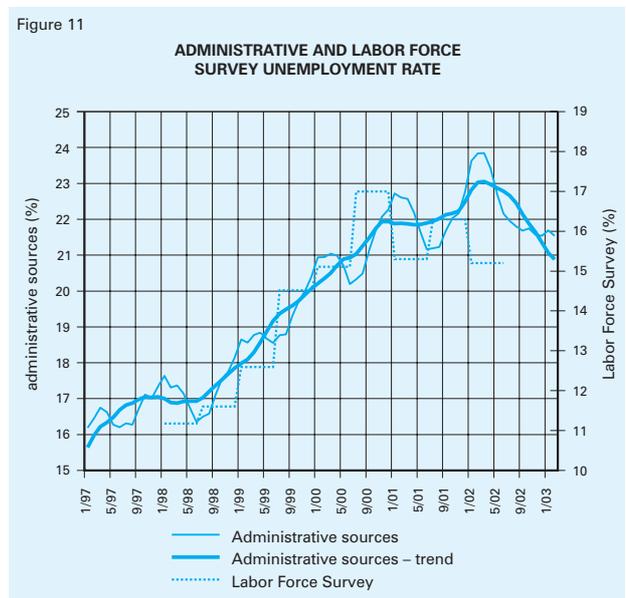

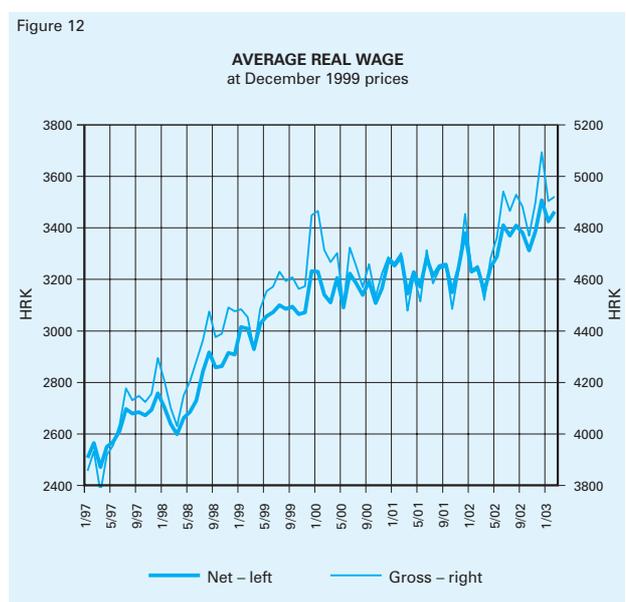

Figure 12

pared with the same period last year. However, the number of persons cleared from the register because they are not considered unemployed pursuant to the new regulations, although marginal for the majority of flows, made the greater impact on movements in registered unemployment than the increase in employment, which is also evidenced by the decrease in labor force.

According to the preliminary CBS data, following the adjustment commonly made at the beginning of the year, total employment grew by 13,000 or 1% in February 2003 compared with that in February 2002. Although the beginning of 2003 saw a seasonal employment low, the final data on employment in January showed a growth at the annual level. The decline in labor force continued in February this year. Compared to a year ago, it fell by almost 36,000 or 2.1%. The registered unemployment rate stood at 21.3% in February 2003, down 2.5 percentage points compared with February 2002.

The average monthly gross wage paid in January and February this year grew at a real annual rate of 5.8%, which approximately equals its growth rate registered in the second half of 2002. The average monthly net wage paid in January and February grew at somewhat higher annual rates (6.0% and 6.8% respectively), and thus exceeded by almost one half the increase in its annual rates registered in the second half of 2002. It can be concluded that net wages grew mostly on account of decreases in taxes and contributions registered at the beginning of the year.

Prices

Retail prices grew by 0.2% in February in comparison with January. Goods prices rose by 0.1% and services prices by 0.6% on average. At the same time, services prices covered by the core inflation index fell by 0.1% month-on-month in February. This leads us to the conclusion that the strong growth in services prices covered by the retail price index was stimulated by the rise in administrative prices of services. In addition,

Figure 13

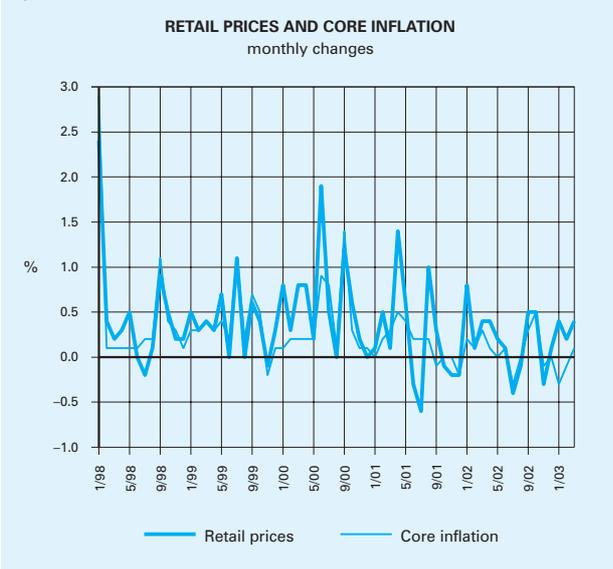

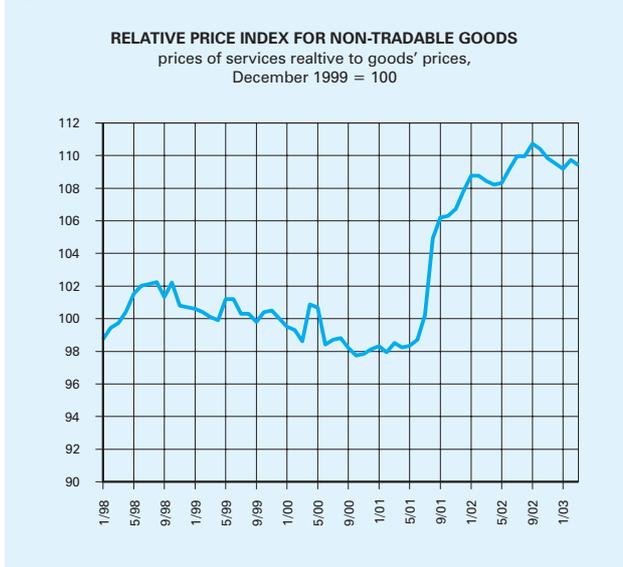

Figure 14

Figure 15

tion, February saw a significant 8% increase, on average, in prices of housing and public utility services (due to a price increase in the contractual rent and heating) and social welfare services (due to an increase in accommodation prices of pupils' hostels). As a result of an increase in prices of city transport, postal and telecommunication services rose by 0.9% on average in February in comparison with January. The year-on-year rate of change of retail prices trended upward, from 1.6% in January to 1.7% in February. The monthly growth rate of retail prices of 0.4% in March (goods 0.5% and services 0.2%) helped contain inflation at 1.7% year-on-year in March. A 5% increase in prices of agricultural products and a 2% increase in prices of liquid fuels and lubricants made the largest contribution to the monthly increase of prices in March.

The year-on-year core inflation rate fell from 1.2% in December 2002 to 0.6% and 0.3% in January and February 2003 respectively, standing at a mere 0.2% in March 2003.

Producer prices of industrial products rose by 2.7% on average in February over January. Following the strong monthly growth in producer prices of 0.8%, which resulted from the growth in prices of energy and the impact of the base period, the year-on-year rate of change of producer prices was 4.7% in March, up 2.4 percentage points compared with the rate registered in December 2002.

Exchange Rate

The seasonal depreciation of the kuna/euro exchange rate, which started in mid-December 2002, continued into March when the kuna weakened by 0.94% (31 March to 28 February). The kuna depreciated against the euro by a total of 3.36% in the first quarter of 2003. As a result, the value of the euro rose from 7.44 kuna on 31 December 2002 to 7.69 kuna on 31 March 2003. The depreciation of the kuna/euro exchange rate was stronger and more pronounced in the first

Figure 16

Figure 17

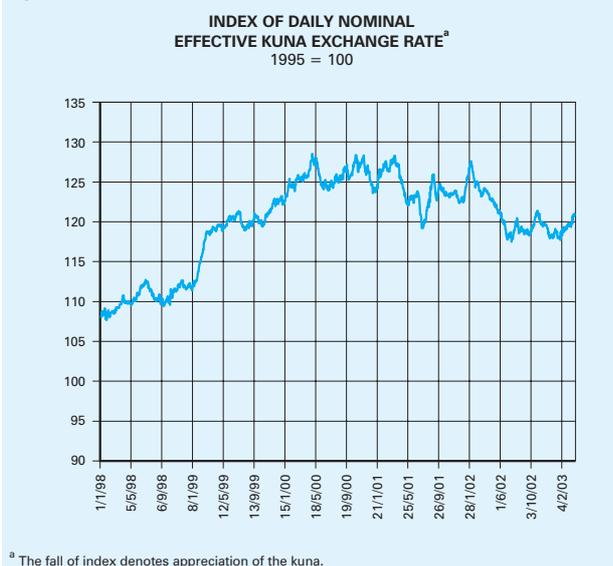

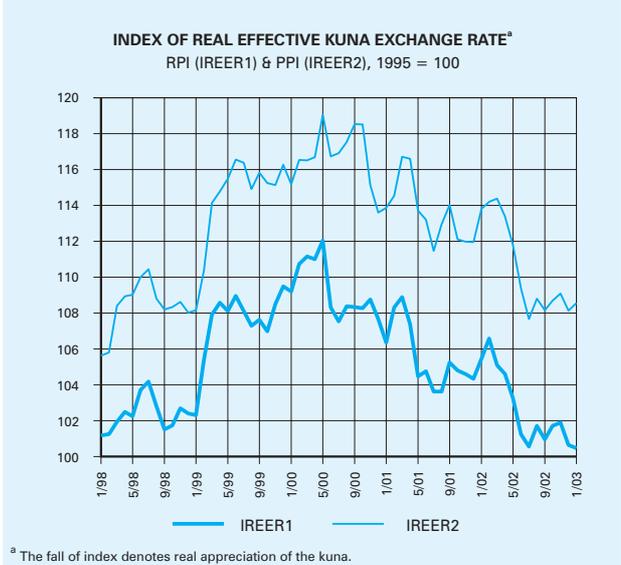

Figure 18

quarter of 2003 than in the same quarter in the previous three years. However, it should be stressed that the exchange rate moved within the acceptable stability range. Underpinned by huge imports at end-2002 and monetary policy measures adopted in January 2003, which stimulated the growth in certain banks' demand for foreign exchange, demand for foreign exchange in 2003 has grown stronger than usual. In addition, receipts from eurobonds were deposited in the government foreign exchange account with the CNB in early 2003, i.e. they remained outside the banking system. It is also likely that an additional increase in demand for foreign exchange has been the result of larger market uncertainties caused by the American military action against Iraq. In these circumstances, the central bank intervened six times in the foreign exchange market in the first quarter of 2003 and sold a total of EUR 315.2m to banks, thereby withdrawing from the market a total of HRK 2.4bn. Out of this amount, a total of EUR 150.1m was sold to banks in March (EUR 82.7m on 5 March, EUR 12.9m on 21 March and EUR 54.5m on 26 March).

In March, the kuna also depreciated against the US dollar (1.59%), the pound sterling (0.11%) and the Slovene tolar (0.72%), which resulted in a 1.12% depreciation of the daily nominal effective kuna exchange rate (a 0.63% depreciation was registered in February).

The real effective kuna exchange rate appreciated by 0.18% (retail prices) and depreciated by 0.37% (producer prices) in January 2003 in comparison with February.

Monetary Developments

In January and February 2003, commercial banks' credit activities slowed down, whereas their net foreign assets (NFA) declined. In the same period, in spite of the kuna depreciation, kuna non-monetary (savings and time) deposits increased, while foreign exchange deposits held steady.

Money (M1) recorded a downturn in January and February in comparison with December 2002, which is usual for the

Figure 19

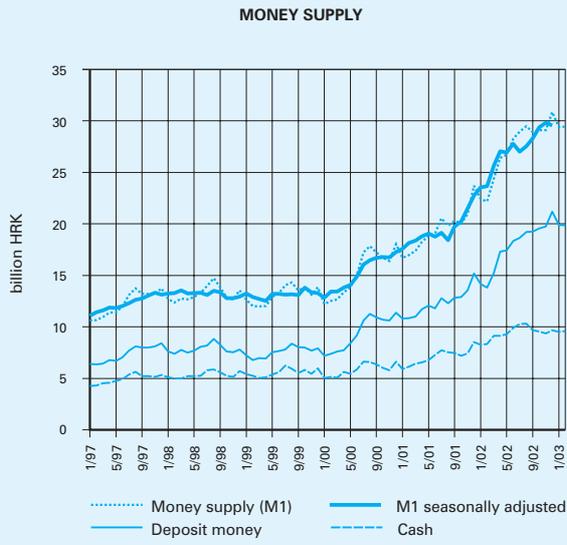

Figure 22

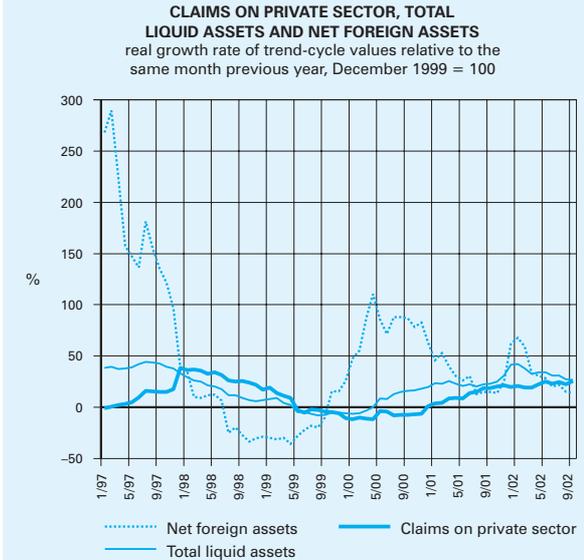

Figure 20

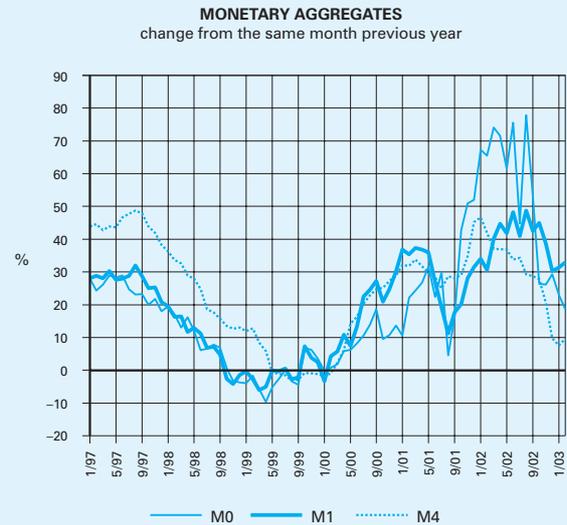

Figure 23

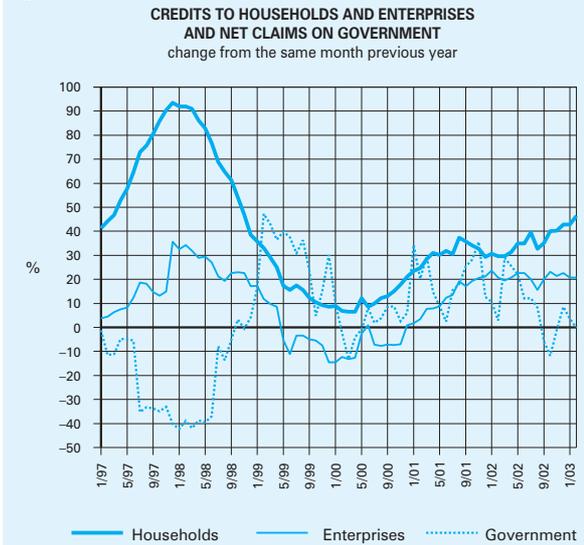

Figure 21

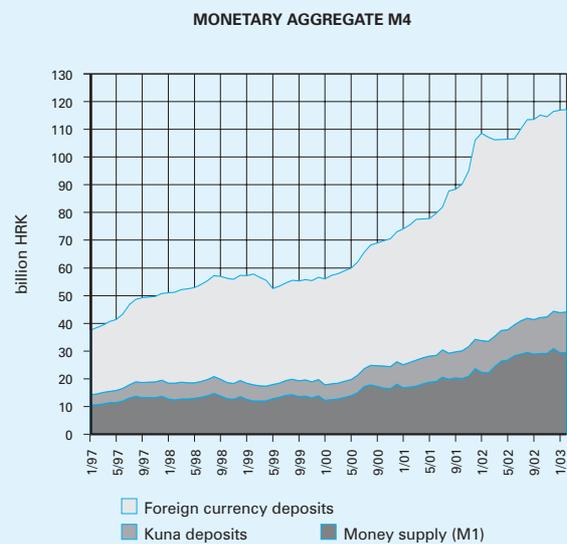

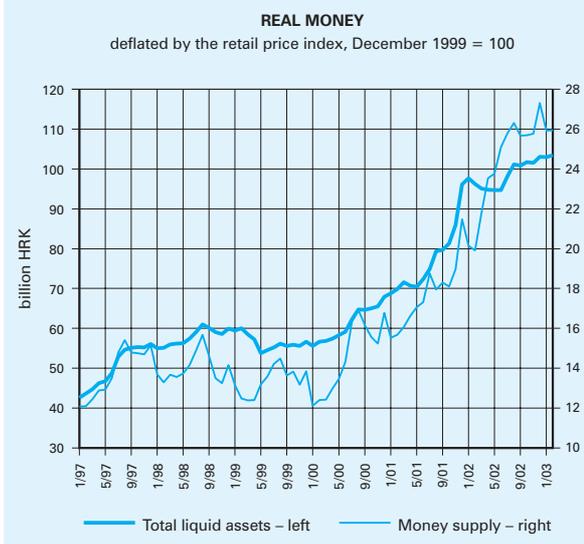

Figure 24

season. M1 stood at HRK 29.5bn at end-February 2003 and was 4.6% lower in nominal terms than at end-December 2002.

Seasonally uncommon developments in currency in circulation, which were recorded in 2002, continued in early 2003: currency fell in January and grew in February. At end-February, currency was 0.8% below its level at end-December 2002.

Demand deposits decreased in the first two months of 2003 in comparison with end-2002. They were 6.3% lower at end-February than in December 2002. This was mostly the consequence of the decline in corporate demand deposits (accounting for 55.3% of total demand deposits), which were HRK 1.4bn (11.0%) lower at end-February than at end-2002. In the same period, household demand deposits rose by a slight HRK 0.3bn (4.6%), whereas demand deposits of all other sectors declined.

Still, kuna non-monetary deposits grew by 10.6% in the first two months of 2003, reaching HRK 14.6bn at end-February. This growth was mostly brought about by a rise in household deposits (HRK 0.6bn or 9.7%) and corporate deposits (HRK 0.5bn or 11.7%).

In contrast to the growth in the kuna component of quasi-money, foreign exchange deposits (the exchange rate effects excluded) remained almost at their December 2002 level (a decline of 0.2%). This was primarily the result of a 5.2% drop in corporate foreign exchange deposits. By contrast, household foreign exchange deposits were 0.8% higher at end-February than in December 2002, the exchange rate effects excluded. Total liquid assets (M4) stood at HRK 117.5bn at end-February, which is a 0.9% increase compared with that at end-2002.

Net domestic assets (NDA) were HRK 1.3bn higher at end-February 2003 than at end-December 2002. Within the NDA structure, net claims of the banking sector on the central government decreased, whereas placements to the non-banking sector increased.

In the first two months of 2003, net claims of deposit money banks on the central government fell by HRK 2.0bn. In the same period, government deposits rose by HRK 2.6bn, mostly owing to the inflow to the government account with the CNB, which resulted from the issue of eurobonds. Government deposits with the central bank grew by HRK 3.3bn, whereas its deposits with commercial banks fell by HRK 0.7bn. In the first two months of 2003, placements to the government rose by HRK 0.5bn (2.5%) as a result of a growth in bond placements of HRK 0.3bn and a rise in bank loans and money market instruments of HRK 0.1bn each.

Bank placements to the non-banking sector rose faster in nominal terms in the first two months of 2003 than in December 2002 (when they recorded a 2.2% month-on-month increase). They recorded a monthly growth of 2.8% in January and a somewhat lower growth of 2.0% in February 2003. However, if the exchange rate effects were excluded, these placements grew by 2.3% in December 2002, which is more than in January (1.7%) and February (1.4%). The exchange rate effects excluded, 1998 was the only year when placements recorded higher cumulative growth rates in the first

Figure 25

* NUR = international reserves – foreign liabilities – f/c denominated CNB bills – reserve requirements in f/c

Figure 26

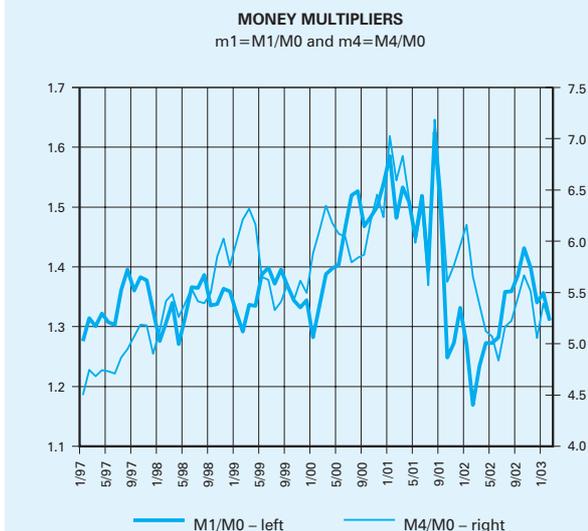

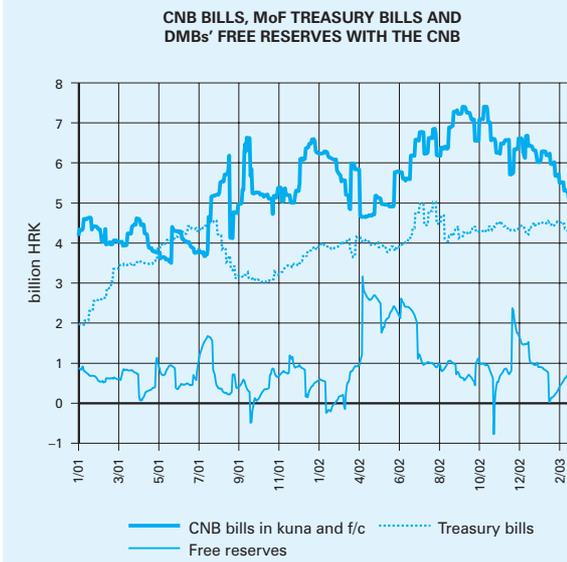

Figure 27

two months. Placements (as defined in the Decision on the Compulsory Purchase of CNB Bills) rose by 3.4% in the first two months of 2003, whereas the stated Decision prescribes that their growth rate should not exceed 4% in the first quarter. In nominal terms, bank lending continued its 2002 growth trend in the first two months of 2003, with household loans growing twice faster than corporate loans. At end-February, household loans were HRK 2.8bn or 6.6% over that at end-2002, whereas corporate loans rose by HRK 1.5bn (3.3%). Thanks to this intense growth, the level of household loans (HRK 45.9bn) came even closer to the level of corporate loans (HRK 48.6bn). The difference in the amount of these loans fell from HRK 8.4bn in February 2002 to HRK 2.7bn at end-February 2003.

In the first two months of 2003, the net foreign assets (NFA) of commercial banks fell by HRK 3.3bn owing to a drop in commercial banks' foreign assets (HRK 2.5bn) coupled with a mild growth in their foreign liabilities (HRK 0.8bn).

In the first quarter of 2003, monetary policy was marked by a seasonal increase in demand for foreign exchange, to which the central bank responded by increased sale of foreign exchange to banks. The shortage of foreign exchange was influenced by the government, which deposited its foreign exchange inflow from the eurobond placement in its account with the CNB, instead of placing it in the accounts with commercial banks as it usually did in the previous years. At the same time, banks increased their demand for foreign exchange to adjust themselves to the new CNB Decision on the Minimum Required Amount of Foreign Exchange Claims. There have been six interventions since the beginning of 2003 (three in March), at which the CNB sold a total of EUR 315.2m, thereby withdrawing HRK 2.4bn, of which almost a half in March.

In order not to worsen their liquidity by the kuna outflow, commercial banks did not renew their subscriptions for kuna CNB bills. The stock of kuna CNB bills subscribed has fallen by HRK 1.1bn since the beginning of 2003 despite the growth in the average interest rate from 2.08% in January to 2.19% at end-March. At the same time, the downward trend in subscriptions for foreign exchange CNB bills halted, and in light of the Decision on the Minimum Required Amount of Foreign Exchange Claims, these bills have grown by HRK 0.2bn since the beginning of 2003.

Implemented monetary policy operations have influenced the liquidity of the banking system. Despite the increase in the allocated kuna reserve requirements of HRK 0.4bn, reserve money stood at HRK 21.9bn at end-March 2003, HRK 1.1bn less than at the beginning of the year, owing to a steady decline in currency in circulation in comparison with that in December 2002. The change in liquidity is thus primarily reflected in the decline of the banks' surplus liquidity, i.e. their free reserves with the CNB, which averaged HRK 0.5bn in February and March, considerably less than at end-2002 (HRK 1.5bn) and January 2003 (HRK 1.1bn). Despite lower liquidity, there is still surplus liquidity in the banking system, and the supply in the money market is sufficient, so that banks did not use a relatively expensive Lombard loan facility in the first three months of 2003.

The February 2003 inflow from the placement of EUR 497.5m (USD 538.8m) worth of eurobonds was deposited to the government account with the CNB (HRK 3.8bn) to settle the government's external obligations. Government foreign exchange deposits with the CNB stood at HRK 2.1bn at end-March 2003.

At end-March 2003, total international reserves stood at USD 6.3bn, while net usable international reserves stood at USD 4.9bn.

Money Market and Interest Rates

Trading volume in the Zagreb Money Market (ZMM) rose in the first two months of 2003 in comparison with end-2002, which halted its months-long downward trend. For the first time since October 2002, loan supply fell significantly in February in comparison with January. In contrast, the money market demand grew for the second consecutive month. In

Figure 28

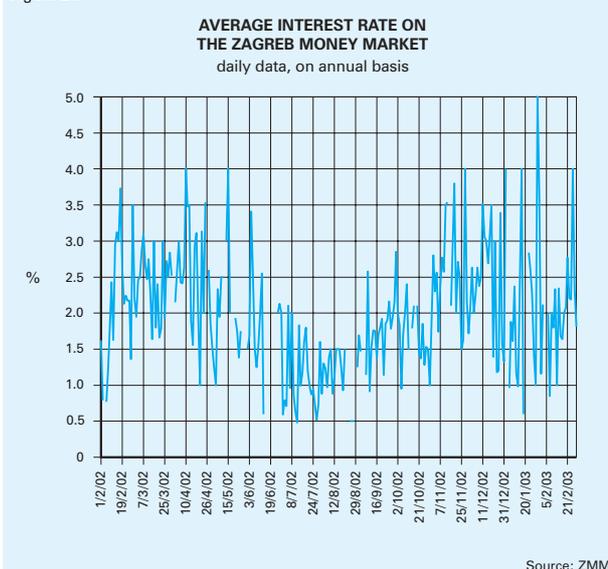

Figure 29

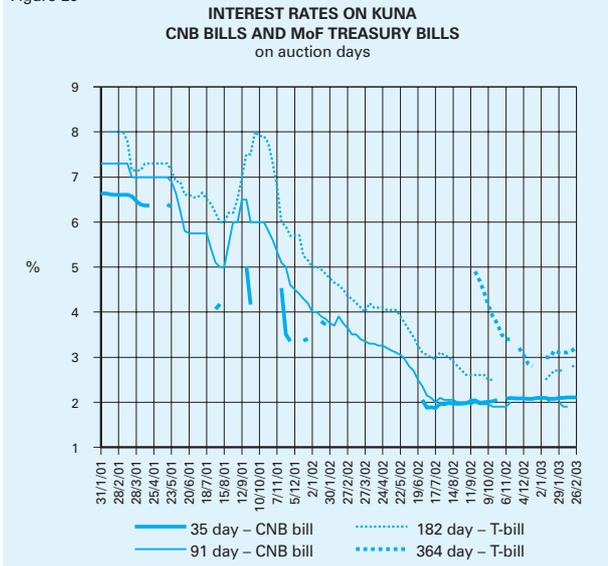

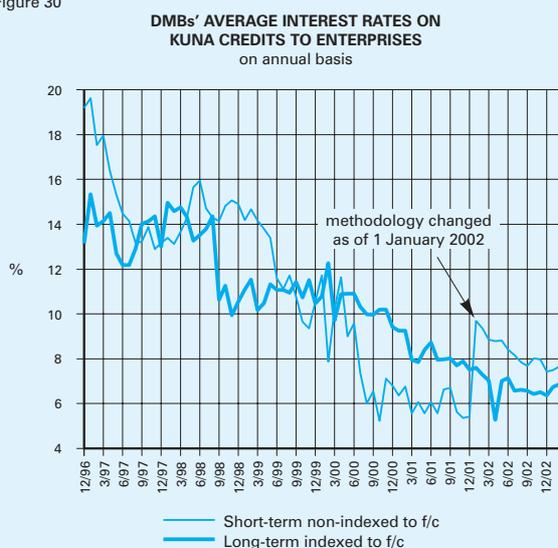

Figure 30

Note: See notes on methodology under Table G1 in Statistical Survey.

Figure 31

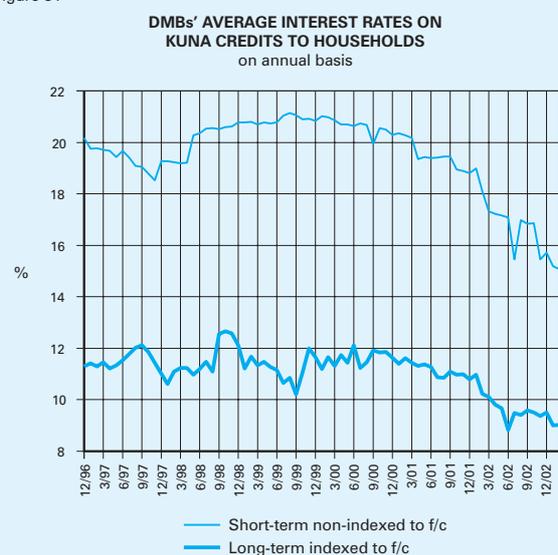

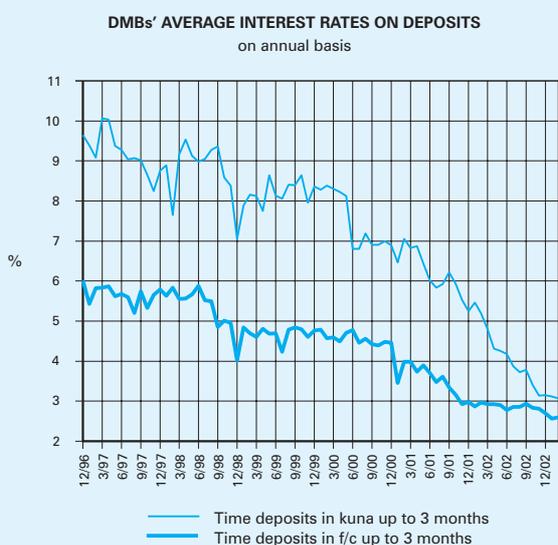

Figure 32

line with these movements, the average interest rates on the money market rose in February in comparison with January. The growth in the total ZMM turnover in January and February resulted from an increase in overnight loans. The average daily turnover in overnight loans was HRK 51.4m in January and HRK 47.7m in February. The weighted average interest rate on overnight loans fell to 1.37% in January and then rose slightly to 1.43% in February. The average daily turnover in other loans was about HRK 12m in the first two months of 2003, a considerable fall compared with end-2002. The weighted monthly interest rate on other loans fell in January and returned to its December 2002 level of 1.9% in February.

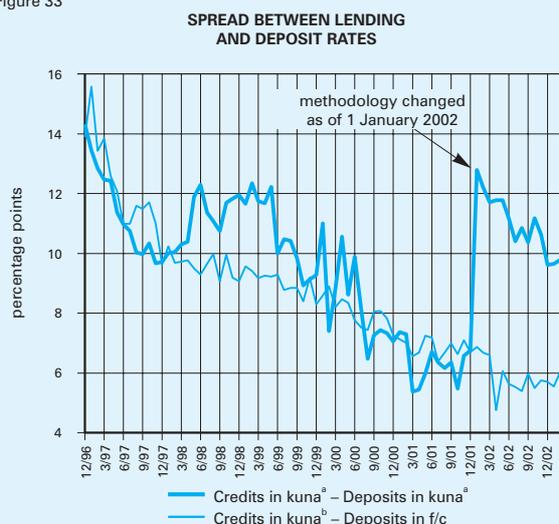

The primary market for CNB bills saw a continuation of a slight increase in the yield on kuna CNB bills, which has started in August last year. The growth in the average monthly interest rate attained at auctions was temporarily halted in January 2003 (2.08%) and continued in February (2.11%). After a months-long decrease, subscriptions for kuna CNB bills grew by HRK 134m in January and fell by almost HRK 1bn in February, to HRK 4.3bn. Subscriptions for 91-day and 182-day T-bills further decreased after the MoF's auctions held in January and February. In contrast, the subscription for 364-day bills continued to grow. The stock of purchased T-bills stood at HRK 5.01bn at end-February. The weighted monthly interest rates on 182-day and 164-day T-bills continued their upward trend in February (2.74% and 3.12% respectively), while the yield on bills with the shortest maturity of 91 days fell to 1.90%.

Following the downward trend that characterized the market for foreign currency CNB bills throughout 2002, the subscribed amount rose from USD 171.9m at end-December 2002 to USD 190.5m at end-February. The yield on foreign currency CNB bills continued to decrease in accordance with interest rate movements on the EU market. The weighted monthly interest rate on euro-denominated 35-day and 63-day CNB bills stood at 2.58% and 2.56% respectively in February. The weighted monthly interest rate on US dollar-denominated CNB bills with the same maturities was 1.15% in February.

The downward trend in DMBs' interest rates on household credits continued in the first two months of 2003, while interest rates on corporate credits grew compared with end-2002. The average interest rate on short-term kuna household credits without a currency clause dropped from 15.72% in December 2002 to 15.07% in February. The average interest rate on long-term household credits with a currency clause also fell in January and February, standing at 9.0%. Compared with end-2002, the average interest rate on short-term kuna corporate credits without a currency clause rose by 20 percentage points, to 7.65%. The average interest rate on long-term kuna corporate credits with a currency clause grew faster, from 6.37% in December 2002 to 6.86% in February.

DMB's deposit rates continued their downward trend and the average interest rate on kuna and foreign currency deposits maturing in up to 3 months was 3.07% and 2.60% respectively in February. As a result of the movements in lending and deposits rates, the spread between interest rates on total credits and total deposits increased in February, standing at 8

Figure 33

Note: Spread is calculated as a difference between average interest rates on credits and average interest rates on deposits. See note to Figure 30.

^a Non-indexed to f/c. ^b Indexed to f/c.

percentage points. The spread between interest rates on kuna credits and kuna deposits stood at 9.79 percentage points in February, which temporarily halted its downward trend.

Balance of Payments

At end-2002, according to preliminary balance of payments data, the current account deficit was USD 1.5bn (a 113.3% increase compared with end-2001) or 6.9% of BDP (a 3.2 percentage point increase compared with 2001). Its twofold increase in 2002 resulted to a large extent from the deterioration in the foreign trade balance and the pronounced cross-currency movements of the dollar against the euro and the kuna. The goods account deficit reached USD 5.3bn in 2002, up 28.7% compared with 2001. This increase was mainly driven by the growth in goods imports stimulated by banks' credit expansion. In contrast, goods exports registered a modest annual growth rate in 2002, which indicates a sluggish growth in Croatian exporters' shares in the international market and insufficient use of privileges offered by the concluded free trade agreements. Net income from tourism was USD 3bn in 2002, an increase of USD 300m or 11.1% in comparison with 2001. Bad weather that hit the Adriatic Coast in August and September and severe floods in Germany, Austria and the countries of Central Europe were the reason behind the drop in foreign tourist arrivals. As a result, lower-than-expected income from tourism was registered in 2002.

Balance of Payments (preliminary data), in million USD

	2002	2001	Indices 1/2

Figure 34

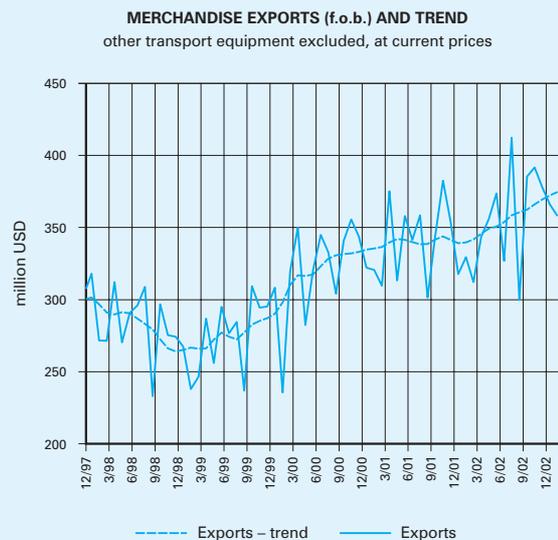

Figure 35

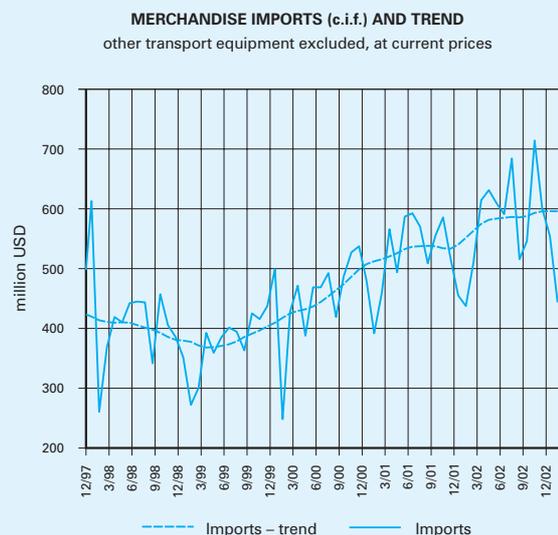

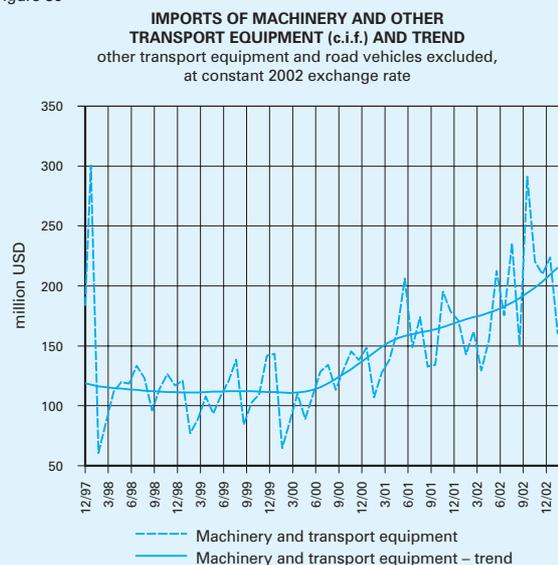

Figure 36

The capital and financial account surplus was USD 2.8bn at end-2002 or twice higher than in 2001 (annual increase of 115.8%). FDIs were USD 890m in 2002 (down 37% compared with 2001) and largely comprised investments in bank privatization. The net effect of portfolio investments was USD -216m in 2002, which indicates that the value of assets held by Croatian residents was higher than the value of their obligations to non-residents. This was largely the result of the increase in foreign debt securities held by Croatian banks and investment funds (USD 430m net) and the decrease in government liabilities arising from bonds issued abroad (USD 450m net). Other investment rose to a high USD 2.7bn in 2002 (up 454.7% compared with 2001) and chiefly related to adjustments in bank portfolios. International reserves of the CNB grew by USD 567m and thus reached USD 5.9bn at end-2002.

Government Finance

Preliminary data of the Ministry of Finance show that the consolidated central government deficit on an accrual basis, together with the budgets of Croatian Highways (CH), Croatian Roads (CR), the State Agency for Deposit Insurance and Bank Rehabilitation, and the Croatian Privatization Fund (CPF) stood at HRK 9.2bn or 5.2% of GDP in 2002. As the local government and self-government budget recorded a surplus of 0.2% of GDP in the first three quarters of 2002, it is expected that its annual outturn will not increase the general government deficit in 2002. Generally speaking, it may be said that the consolidated central government deficit continued its downward trend in 2002. Under the stand-by arrangement signed with the IMF, the general government deficit for

Source: CNB

2002 was projected at 6.2% of GDP, and according to the Government's announced targets, this deficit should be 5% of GDP in 2003, 1.2 percentage points less than in 2002. This means that the adjustment of government consumption in 2003 should be only 0.2% of GDP, instead of the programmed 1.2% of GDP. In other words, a considerable fiscal adjustment projected for 2003 was to a large extent achieved in 2002.

The consolidated central government deficit (capital revenues excluded) stood at HRK 0.7bn in January 2003, which is a nominal increase of HRK 200m or 36.7% in comparison with the same period last year. Current revenues stood at HRK 5.1bn in January (a nominal increase of 4.9%), whereas total expenditures minus net lending were HRK 5.8bn (a nominal increase of 8.0%). Almost the total deficit growth (75%) was the result of increased interest payments on external debt, which were HRK 150m higher in January 2003 than in January 2002. These data do not include the CH and CR data. In January 2003, the budgets of both CH and CR were balanced, so they did not contribute to a rise in the consolidated central government deficit.

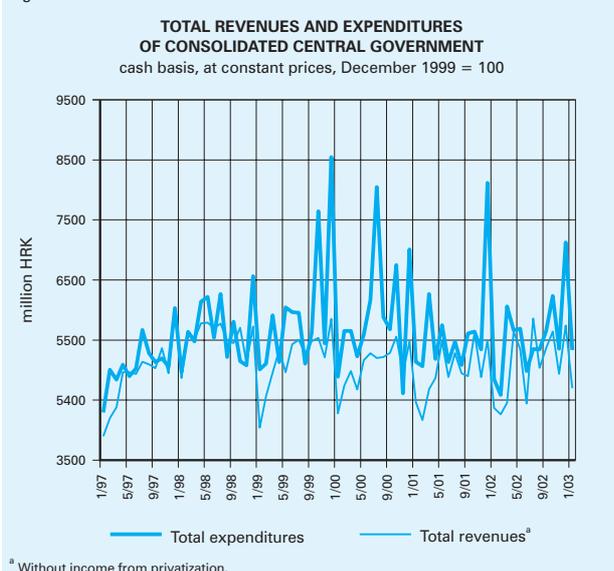

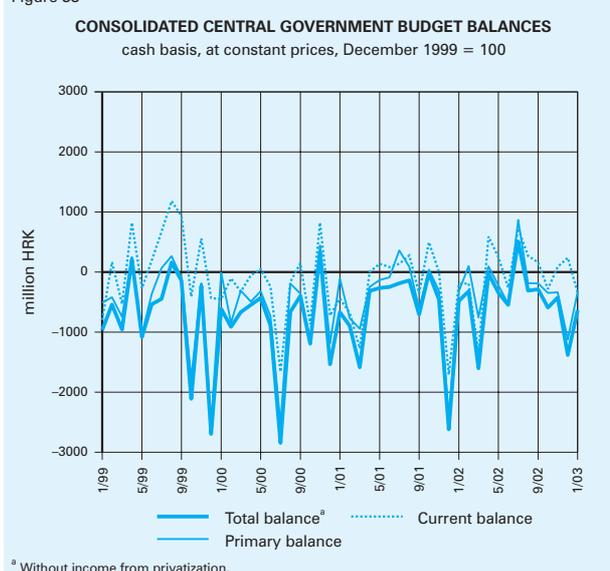

Figure 38

Statistical Survey

Classification and Presentation of Data on Claims and Liabilities

Data on financial institutions' claims and liabilities are classified according to institutional sectors and financial instruments. Institutional sectors are: financial institutions, central government and funds, other domestic sectors and foreign sector.

The financial institutions sector includes the following sub-sectors: monetary authorities (the central bank), deposit money banks (DMBs), other banking institutions and other financial institutions. The central bank is the Croatian National Bank (CNB). Deposit money banks are institutions to which the Croatian National Bank has issued a license to perform banking business services in accordance with the Banking Law, including savings banks during a transition period. Data on DMBs do not include claims and liabilities of banks undergoing bankruptcy proceedings, nor former branches of banks with their headquarters in the former Yugoslavia. Other banking institutions comprise housing savings banks, savings and loan cooperatives and investment funds. Other financial institutions are financial institutions not classified as banks or other banking institutions (for example insurance companies,

pension funds).

The central government and funds comprise government authorities including the Croatian Roads Administration, State Agency for Deposit Insurance and Bank Rehabilitation and Croatian Guarantee Agency, and the following central government funds: Croatian Institute for Health Insurance, Croatian Pension Insurance Institute, Croatian Employment Institute, Croatian Privatization Fund, Croatian Waters and Croatian Bank for Reconstruction and Development. Other domestic sectors are local government authorities and local funds, public and private enterprises and households, including craftsmen and non-profit institutions providing services to households. In some tables other domestic sectors are divided into the following sub-sectors: local government (which comprises local government authorities and local funds), public and private enterprises, and households (including craftsmen and non-profit institutions).

Foreign sector includes foreign legal and natural persons.

All data on claims and liabilities refer to balances at the end of the reporting period. Foreign exchange items are reported in their kuna equivalent at the midpoint CNB exchange rate at the end of the reporting period.

^a Domestic credit decreased by a one-off HRK 2,759.4m.

Table A1: Monetary and Credit Aggregates

The table shows data on some basic monetary and credit aggregates, including their monthly growth rates. In September 1999, all the monetary aggregates were revised. In previous publications of the CNB, data on claims and obligations of savings banks were not included in the compilation of the monetary aggregates.

Reserve money is taken over in its entirety from the Monetary Authorities Accounts (Table C1).

Money (M1) is defined in the same way as the corresponding item in the Monetary Survey (Table B1). It comprises currency outside banks, deposits with the CNB by other banking institutions and other domestic sectors as well as DMBs' demand deposits. Money (M1a) comprises currency outside banks and DMBs' demand deposits, increased by the demand deposits of the central government and funds with DMBs.

Broadest money (M4) comprises Money (M1), savings and time deposits, foreign currency deposits as well as bonds and money market instruments (all components are taken over from the Monetary Survey, Table B1).

Net domestic assets are defined as a difference between total liquid assets and foreign assets (net).

Domestic credit comprises DMBs' claims on other domestic sectors, other banking institutions and other financial institutions.

In May 1999, bankruptcy proceedings have been initiated against several banks so their assets and liabilities are excluded from monetary statistics. In April 1999, those banks' share in monetary aggregate M1 amounted to 259.3 million kuna and in monetary aggregate M4 amounted to 4,035.8 million kuna. Data for June 1999 are comparable with data for July 1999 if Domestic credit is increased by 3,513.5 million kuna.

^a The privatisation of Privredna banka Zagreb brought about a one-off decrease in its balance sheet total of HRK 2,759.4m. Loans in f/c to public enterprises diminished on the assets side and at the same time obligations to the Republic of Croatia arising from loans in f/c diminished on the liabilities side. Loans in f/c to public enterprises are listed under assets item "2.2. Claims on other domestic sectors". Obligations to the Republic of Croatia arising from loans in f/c are listed under assets item "2.1 Claims on central government and funds (net)".

^b The first revaluation of securities with the effect of HRK 165.5m was conducted within the CNB's international reserves as at 31 December 2001. Accrued interest on deposits, with the effect of HRK 63.8m, was included in the international reserves as at 31 December 2001 as well. The CNB's foreign liabilities increased by HRK 6.4m on the basis of accrued interest, while liabilities on the basis of required foreign exchange reserves increased by HRK 8.6m.

Table B1: Monetary Survey

The monetary survey shows consolidated data from the Monetary Authorities Accounts (Table C1) and DMBs' Accounts (Table D1).

Foreign assets (net) are the difference between total foreign assets and total foreign liabilities of the CNB and DMBs.

Domestic credit is the sum of corresponding items from Monetary Authorities Accounts and DMBs' Accounts. Claims on central government and funds are reported on a net basis, i.e. decreased by central government and funds' deposits with the CNB and DMBs.

Money is the sum of currency outside banks, deposits by other banking institutions with the CNB, deposits by other domestic sectors with the CNB and DMBs' demand deposits (item Demand deposits in DMBs' Accounts, Table D1).

Items Savings and time deposits, Foreign currency deposits as well as Bonds and money market instruments are entirely taken over from the DMBs' Accounts, while item Restricted and blocked deposits represents the sum of corresponding items from the Monetary Authorities Accounts (excluding DMBs' blocked deposits with the CNB) and DMBs' Accounts. Other items (net) are unclassified liabilities decreased by unclassified assets.

In May 1999, bankruptcy proceedings have been initiated against several banks so their assets and liabilities are excluded from monetary statistics. In April 1999, those banks' share in DMBs' balance sheet total amounted to 4,296.3 million kuna. Data for June 1999 are comparable with data for July 1999 if Claims on other domestic sectors and Other items (net) are increased by 3,513.5 million kuna.

Table B2: Number of Reporting Deposit Money Banks and Savings Banks and their Classification by Total Assets

Table B2: Number of Reporting Deposit Money Banks and Savings Banks and their Classification by Total Assets

The table shows the total number of DMBs and savings banks which report monthly to the CNB. Their operations are shown in the DMBs' Accounts.

Special reporting requirements applied to savings banks until June 1995. Savings banks were not legally obliged to report on their operations, so that data up to June 1995 relate only to those savings banks

that reported voluntarily to the CNB. From July 1995 on, the data cover all registered savings banks. In accordance with the Banking Law, savings banks must meet the conditions set out in the Law by December 31, 2001, or they will be liquidated.

The table also shows the classification of reporting DMBs and savings banks according to their total assets.

In May 1999, bankruptcy proceedings have been initiated against several banks so their assets and liabilities are excluded from monetary statistics.

^a Since October 2001, Liabilities to foreign banks include also liabilities based on CNB bills subscribed by nonresidents.^b In December 2002, CDA accounts with the CNB for the gross and net settlement of purchased securities have been reclassified from the sector central government to the sector other financial organisations.

Table C1: Monetary Authorities Accounts

The table reports data on claims and liabilities by monetary authorities. In September 1999, the data were revised, with savings banks being transferred from the sub-sector other banking institutions to the sub-sector banks. The whole data series has been revised accordingly.

Foreign assets include the following forms of foreign currency and kuna claims on foreign legal and natural persons: monetary gold, holdings of special drawing rights, foreign cash in vault, reserve position in the International Monetary Fund, current account balances with foreign banks and accrued interest, time deposits with foreign banks, foreign currency security investments and other claims.

Claims on central government and funds are loans and overdue claims on the budget of the Republic of Croatia. Claims in kuna were short-term loans granted for the purpose of overcoming timing differences between incoming revenues and execution of budgetary expenditures, long-term loans granted by special decrees by the government of the Republic of Croatia, and overdue claims on the budgetary central government based on the liabilities to the IMF and foreign banks. Item Claims in foreign currency was a counter-entry to the liability to the IMF based on the succession of membership in that institution. In accordance with the new Law on the Croatian National Bank that entered into force in April 2001, the Croatian National Bank may not extend credit to the Republic of Croatia.

Claims on other domestic sectors are loans and overdue claims on other domestic sectors, including banks in bankruptcy proceedings.

Claims on DMBs are credits to DMBs, deposits by the CNB with DMBs and overdue claims on DMBs. Credits to DMBs are split according to the type of financial instruments. Item Lombard credits comprises credits to DMBs for regular maintaining of the day-to-day liquidity, which were replaced by lombard credits in December 1994. Short-term liquidity credits, which have been granted since the beginning of 1999, also serve to bridge liquidity problems. Other credits include intervention credits, special credits for bridging liquidity problems granted in the past (initial credits, prerehabilitation credits) and due but unpaid credits. Overdue claims on DMBs comprise settlement account overdrafts (until mid-1994) and banks' failure to correctly and promptly allocate and maintain statutory reserve requirements.

Since May 1999, Claims on other domestic sectors include overdue claims on banks against which bankruptcy proceedings have been initi-

ated. Due to the reclassification of savings banks from the sub-sector other banking institutions to the sub-sector banks, data for Claims on DMBs and Claims on other banking institutions have been revised.

Reserve money consists of currency outside banks, cash in DMBs' vaults, DMBs' deposits with the CNB, other banking institutions' deposits and other domestic sectors' deposits with the CNB. DMBs' deposits are: settlement account balances, statutory reserves deposited on a special account with the CNB as well as CNB bills on an obligatory basis. Deposits by other banking institutions are settlement account balances of housing savings banks. Deposits by other domestic sectors are other domestic sectors' giro account balances which, on the basis of legal acts are deposited with the Croatian National Bank.

Restricted and blocked deposits include required foreign exchange reserves and accrued interest, restricted deposits and blocked foreign exchange deposits. Banks and savings banks are required to place foreign exchange reserve deposits in accounts at the Croatian National Bank on the basis of certain foreign exchange deposits they hold. Restricted deposits are kuna funds set aside on the basis of a court order or legal regulation, kuna funds set aside in the period between May 1999 and April 2002 and deposits of banks against which bankruptcy proceedings have been initiated. Blocked foreign exchange deposits are funds that were set aside in special accounts at the Croatian National Bank for repaying unpaid amounts due to foreign creditors.

Foreign liabilities include use of IMF credits, liabilities to international financial institutions and foreign banks and accrued interest.

Central government and funds deposits are demand deposits and foreign currency deposits of the Republic of Croatia and central government funds with the CNB, and CNB bills purchased by central government institutions.

CNB bills are kuna and f/c CNB bills on a voluntary basis, excluding CNB bills voluntarily purchased by central government institutions.

Capital accounts include reserves, provisions and the income and cost accounts.

Other items (net) are unclassified liabilities decreased by unclassified assets of the Monetary Authorities Accounts.

Due to the reclassification of savings banks from the sub-sector other banking institutions to the sub-sector banks, data for Currency outside banks, DMBs' cash in vaults, DMBs' deposits and Deposits of other banking institutions were revised.

^a The privatisation of Privredna banka Zagreb brought about a one-off decrease in its balance sheet total amount of HRK 2,759.4m. Loans in f/c to public enterprises diminished on the assets side and at the same time obligations to the Republic of Croatia arising from loans in f/c diminished on the liabilities side. Loans in f/c to public enterprises are listed under assets item "4.2 Claims on enterprises". Obligations to the Republic of Croatia arising from loans in f/c are listed under liabilities item "6. Central government and funds' deposits".

Table D1: Deposit Money Banks' Accounts

DMBs' Accounts include data on DMBs' claims and liabilities. DMBs' mutual claims and liabilities are consolidated. In September 1999, the data was revised to include savings banks. The whole data series was revised accordingly.

Required reserves held at the central bank include kuna and foreign exchange reserves. Kuna reserves include vault cash and kuna funds held in accounts at the central bank. Foreign exchange reserves include foreign exchange held in accounts at the central bank.

Foreign assets are the following forms of kuna and foreign currency claims on foreign legal and natural persons: foreign cash in vaults, deposits with foreign banks (including loro letters of credit and other collateral), securities, loans, and equities.

Claims on central government and funds are the following forms of claims in kuna and foreign currency: securities and loans. The main forms of claims on the central government are shown separately: bonds issued in accordance with the Law on Converting Households' Foreign Exchange Deposits into the Public Debt of the Republic of Croatia, and bonds issued in accordance with the Law on the Issue of Bonds for the Restructuring of the Economy of the Republic of Croatia.

Claims on other domestic sectors include the following claims in

kuna and foreign currency: money market instruments, bonds, loans (including acceptances), and equities.

The same forms of kuna and foreign currency claims are included in claims on other banking institutions and other financial institutions, with one difference: Claims on other banking institutions also include deposits with those institutions.

Items Demand deposits, Savings and time deposits, Foreign currency deposits as well as Bonds and money market instruments comprise banks' liabilities to other domestic sectors, other banking institutions and other financial institutions.

Demand deposits include giro and current accounts balances and banks' obligations arising from kuna payment instruments issued, minus currency in the payment system, i.e. checks in banks' vaults and checks in collection.

Savings and time deposits are kuna sight deposits as well as kuna time and notice deposits.

Foreign currency deposits are foreign currency sight deposits as well as foreign currency time and notice deposits.

Bonds and money market instruments are banks' liabilities for securities issued (net) and loans obtained. Issued subordinated and hybrid instruments, purchased by foreign investors, are excluded from this item.

Foreign liabilities comprise the following forms of kuna and foreign currency liabilities to foreign legal and natural persons: giro and current accounts, savings deposits (including loro letters of credit and other forms of collateral), time deposits, loans received and liabilities due. Issued debt and hybrid instruments, purchased by foreign investors, are also included in loans received. Central government and funds' deposits are all forms of DMBs' kuna and foreign currency liabilities (except restricted and blocked deposits) to the central government and funds.

Credit from central bank comprises loans obtained from the CNB and deposits by the CNB with DMBs. Repurchase of securities is also considered and treated as a loan.

Restricted and blocked deposits comprise the following DMBs' liabilities: kuna and foreign currency restricted deposits by other domestic sectors, other banking institutions, other financial institutions, central government and funds as well as foreign legal and natural persons; and households' blocked foreign currency deposits, regulated by the Law on Converting Households' Foreign Exchange Deposits into the Public Debt of the Republic of Croatia.

Capital accounts are share capital, profit or loss for the current year, retained profit (loss), required reserves, reserves provided for by the articles of association, other capital reserves and provisions for identified

and unidentified losses.

Other items (net) are unclassified liabilities decreased by unclassified assets.

In May 1999, bankruptcy proceedings have been initiated against several few banks so their assets and liabilities are excluded from monetary statistics. In April 1999, those banks' share in the DMBs' balance sheet total amounted to 5,701.4 million kuna. On the assets side, most significant were: Claims on enterprises (4,378.7 million kuna) and Claims on households (701.4 million kuna). On the liabilities side, most significant were: Foreign currency deposits (3,443.7 million kuna), Foreign liabilities (1,024.6 million kuna) and Capital accounts (854.6 million kuna). Beginning in July 1999, the total amount of provisions for identified losses is shown within the Capital accounts item. Data for June 1999 are comparable to data for July 1999 if Claims on other domestic sectors and Capital accounts are increased by 3,513.5 million kuna. Other items have been corrected by small amounts.

Tables: D2-D12

This group of tables (with the exception of Table D5) represents an elaborate presentation of appropriate items of claims and liabilities of DMBs' Accounts (Table D1).

Table D2: Deposit Money Banks' Foreign Assets

This table shows DMBs' claims on foreign legal and natural persons.

Foreign assets of DMBs' comprise foreign assets in kuna and foreign currency.

Claims on foreign banks and Claims on foreign nonbanks (total and by financial instruments) are shown separately within both foreign as-

sets in kuna and in foreign currency.

In May 1999, bankruptcy proceedings have been initiated against several banks so their assets and liabilities are excluded from monetary statistics. In April 1999, those banks' Foreign assets amounted to 402.3 million kuna. Through June 1999, some households' f/c savings deposits were included in Demand deposits and f/c savings deposits.

Table D3: Deposit Money Banks' Claims on the Central Government and Funds

The table shows kuna and foreign currency DMBs' claims on the central government and funds.

Bonds arising from blocked foreign currency savings deposits are issued in accordance with the Law on Converting Households' Foreign Exchange Deposits into the Public Debt of the Republic of Croatia.

Big bonds are those issued in accordance with the Law on the Issue

of Bonds for the Restructuring of the Economy of the Republic of Croatia.

Other claims are all other DMBs' kuna and foreign currency claims on central government and funds: securities, loans and equities.

In May 1999, bankruptcy proceedings have been initiated against several banks so their assets and liabilities are excluded from monetary statistics. In April 1999, those banks' Claims on central government and funds amounted to 17.8 million kuna.

^a Loans in f/c decreased by a one-off HRK 2,759.4m.

Table D4: Deposit Money Banks' Claims on Other Domestic Sectors

The table shows DMBs' kuna and foreign currency claims on other domestic sectors, classified according to financial instruments: money market instruments, bonds, loans and advances (including acceptances and purchased claims), and equities and arrears.

Until October 1994, foreign currency loans could be granted only when a DMB simultaneously borrowed abroad in their own name and for the account of the end-user.

In May 1999, bankruptcy proceedings have been initiated against several banks so their assets and liabilities are excluded from monetary statistics. In April 1999, those banks' Claims on other domestic sector amounted to 5,088.0 million kuna. Data for June 1999 are comparable with data for July 1999 if item Loans and advances under Claims in kuna is increased by 2,904.3 million kuna, item Shares and participations is decreased by 520.3 million kuna, and if item Loans and advances under Claims in f/c is increased by 1,129.4 million kuna.

Table D5: Distribution of Deposit Money Banks' Loans by Domestic Institutional Sectors

The table shows data on kuna and foreign currency loans granted by DMBs to domestic sectors, including acceptances, financial leases, payments made on the basis of guarantees and similar instruments and purchased claims.

In May 1999, bankruptcy proceedings have been initiated against several banks so their assets and liabilities are excluded from monetary statistics. In April 1999, those banks' loans amounted to 4,463.3 million kuna. Data for June 1999 are comparable with data for July 1999 if total loans in kuna are increased by 2,972.6 million kuna, and total loans in f/c are increased by 840.9 million kuna.

Table D6: Demand Deposits with Deposit Money Banks

The table shows demand deposits with DMBs, classified by domestic institutional sectors.

Demand deposits are the sum of other domestic sectors', other banking institutions' and other financial institutions' giro and current accounts balances, minus currency in the payment system (i.e. amount

of checks in banks' vaults and checks in collection). Banks' obligations arising from kuna payment instruments issued are included in the household sector.

In May 1999, bankruptcy proceedings have been initiated against several banks so their assets and liabilities are excluded from monetary statistics. In April 1999, Demand deposits with those banks amounted to 259.3 million kuna.

Table D7: Time and Savings Deposits with Deposit Money Banks

The table shows Kuna savings and time deposits by other domestic sectors, other banking institutions and other financial institutions with DMBs.

In May 1999, bankruptcy proceedings have been initiated against

several banks so their assets and liabilities are excluded from monetary statistics. In April 1999, Time and savings deposits with those banks amounted to 323.7 million kuna. In July 1999, certain deposits of local government, enterprises, other banking institutions and other financial institutions were reclassified from savings to time deposits.

Table D8: Foreign Currency Deposits with Deposit Money Banks

The table shows foreign currency savings and time deposits by other domestic sectors, other banking institutions and other financial institutions with DMBs. Foreign currency savings deposits are all foreign currency sight deposits and foreign currency payment instruments

issued while foreign currency time deposits also include foreign currency notice deposits.

In May 1999, bankruptcy proceedings have been initiated against several banks so their assets and liabilities are excluded from monetary statistics. In April 1999, Foreign currency deposits with those banks amounted to 3,443.7 million kuna.

Table D9: Bonds and Money Market Instruments

The table shows DMBs' liabilities for securities issued (net) and loans received from other domestic sectors, other banking institutions and other financial institutions.

Money market instruments (net) comprise DMBs' net liabilities for CNB bills, bills of exchange (issued and accepted) and other securities issued.

Bonds (net) comprise DMBs' net liabilities for kuna and foreign currency bonds issued, as well as issued subordinated and hybrid instru-

ments, excluding those purchased by foreign investors.

Other domestic borrowing comprises loans received, reported total and classified by institutional sectors.

In May 1999, bankruptcy proceedings have been initiated against several banks so their assets and liabilities are excluded from monetary statistics. In April 1999, those banks' Bonds and Money market instruments amounted to 9 million kuna. In July 1999, certain debt and hybrid instruments were reclassified from Time and notice deposits to Bonds (net). The amount reclassified was 3,513.5 million kuna.

Table D10: Deposit Money Banks' Foreign Liabilities

The table shows DMBs' total foreign currency and kuna liabilities to foreign legal and natural persons, with the exception of restricted kuna and foreign currency deposits by foreign legal and natural persons.

DMBs' foreign liabilities comprise foreign currency liabilities and foreign kuna liabilities.

Within foreign kuna and foreign currency liabilities, liabilities to for-

ign banks are reported separately from liabilities to foreign nonbanks (total and by financial instruments). Within foreign liabilities in f/c, loans and advances also include issued subordinated and hybrid instruments purchased by foreign investors.

In May 1999, bankruptcy proceedings have been initiated against several banks so their assets and liabilities are excluded from monetary statistics. In April 1999, those banks' Foreign liabilities amounted to 1,024.6 million kuna.

Table D11: Central Government and Funds' Deposits with Deposit Money Banks

The table reports total DMBs' kuna and foreign currency liabilities to the central government and funds, with the exception of restricted (kuna and foreign currency) deposits by the central government and funds with DMBs.

Kuna and foreign currency deposits by the Republic of Croatia and central government funds are shown separately. Kuna deposits com-

prise demand deposits, savings deposits, kuna time and notice deposits, and kuna loans obtained from the central government and funds. Foreign currency deposits comprise foreign currency sight deposits, as well as savings deposits, foreign currency time and notice deposits.

In May 1999, bankruptcy proceedings have been initiated against several banks so their assets and liabilities are excluded from monetary statistics. In April 1999, Central government and funds deposits with those banks amounted to 193.5 million kuna.

Table D12: Restricted and Blocked Deposits with Deposit Money Banks

The table shows restricted and blocked deposits by the central government and funds, other domestic sectors, other banking institutions, other financial institutions and foreign legal and natural persons with DMBs.

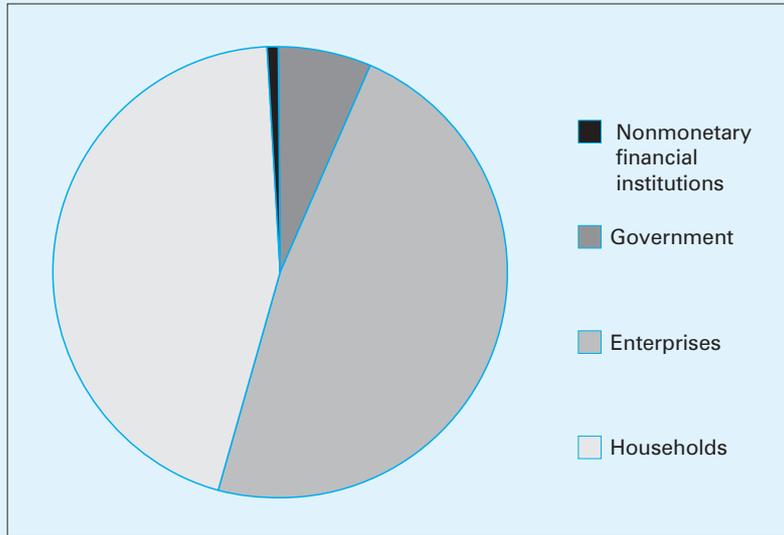

Restricted and blocked deposits include two categories of deposits: restricted (kuna and foreign currency) deposits and blocked foreign currency deposits.

Blocked foreign currency deposits include households' foreign currency deposits regulated by the Law on Converting Households' Foreign Exchange Deposits into the Public Debt of the Republic of Croatia.

In May 1999, bankruptcy proceedings have been initiated against several banks so their assets and liabilities are excluded from monetary statistics. In April 1999, Restricted and blocked deposits with those banks amounted to 39.9 million kuna. In July 1999, data on blocked deposits of the central government and of enterprises were revised.

Table E1: Housing Savings Banks' Accounts

Housing savings banks' accounts include data on claims and liabilities of the Croatian housing savings banks. All housing savings banks' claims and liabilities refer exclusively to domestic sectors.

Housing savings banks' required reserves held at the central bank include kuna vault cash and kuna funds held in accounts at the central bank.

Claims on central government and funds are claims in kuna on the Republic of Croatia and central government funds.

Claims on other domestic sectors include kuna loans to local government and households.

Claims on banks include loans extended to banks, as well as depos-

its with banks.

Claims on other banking institutions include investments in investment funds.

Item Time deposits includes local government and households' time deposits.

Bonds and money market instruments are housing savings banks' liabilities for securities issued (net) and loans obtained.

Capital accounts include share capital, profit or loss for the current year, retained profit (loss), required reserves, reserves provided for by the articles of association, other capital reserves and provisions for identified and unidentified losses.

Other items (net) are unclassified liabilities decreased by unclassified assets.

Table F1: Credit Rates of the Croatian National Bank

The table shows interest rates used by the CNB to calculate and charge interest on loans and on all other claims.

Credit rates of the CNB are being set by special decisions of the Council of the Croatian National Bank, on annual basis. Exceptionally, from June 1995 to September 11, 1996 interest rate charged by the CNB on lombard credits was 1.5 percentage point higher than the weighted average interest rate on CNB bills on a voluntary basis (which serve as collateral for lombard credits) in cases when the weighted average interest rate was higher than 16.5%. Congruently, from June 1995 to August 1996 the table reports weighted average interest rate on lombard credits. Interest rate in September 1996 is calculated as the weighted average of interest rate applied in the first 10 days of September 1996 (according to the regime mentioned above) and fixed interest rate applied since September 11, 1996.

Time series presented in the table contain certain breaks, due to changes in CNB's monetary policy instruments. Consequently, until November 1994, column 4 shows interest rates on regular credits for maintenance of day-to-day liquidity, which were granted based on securities portfolio, and from December 1994 onwards, interest rates on lombard credits.

Furthermore, data shown in column 6 refer, until September 1994, to interest rates on special credits for savings deposits' payments and for payments from households' current accounts, and from October 1994 until September 1997 to interest rates on daily credits for savings deposits and households' current accounts in kuna. Daily credits, as opposed to special credits, are paid back on the same day. In October 1997, this instrument was replaced by daily credits for overcoming

short-term liquidity problems that are collateralized by CNB bills. Since December 1998 until April 1999, this credit is incorporated in lombard credit, applying different interest rate for its usage within one day.

Data shown in column 7 refer, until December 1994, to interest rate on initial credits, and since March 18, 1998, to credits for overcoming liquidity problems of banks under evaluation for entry into rehabilitation and restructuring procedures and since February 1999, to interest rates on short-term liquidity credits. Since December 1999, data show interest rates on short-term liquidity credit with a maturity over 3 months which is 1 percentage point higher than interest rate on lombard credits. Interest rate on short-term liquidity credit up to 3 months is 0.5 percentage point higher than interest rate on lombard credits.

Interest rates reported in column 8 refer to the use of statutory reserves, which was being used by banks (in prescribed percentage) to maintain day-to-day liquidity until September 1994. Interest rates paid until September 1994 on the use of statutory reserve funds in amount above prescribed and/or for longer period than allowed are shown in column 9. Since October 1994, interest rates paid on the use of statutory reserve funds are the same as those used for any other failure to fulfill financial obligations, in accordance with the late interest regulations (shown in column 10).

Until June 1994, the same interest rate was applied to funds used above amounts available on giro accounts and to inaccurately calculated or under-appropriated statutory reserves (reported in column 9). From July to September 1994, interest rate applied to the use of those funds from the primary issue was 21%, and since October 1994, the same interest rates have been applied as for other failures to fulfill financial obligations, shown in column 10.

Table F2: Deposit Rates of the Croatian National Bank

The table shows interest rates paid by the CNB on funds deposited with the CNB as well as on securities issued.

Interest rates paid by the CNB for appropriated statutory reserve funds are being set by the Council of the CNB. Until 7 October 1993, the CNB was setting different exchange rates for statutory reserve funds based on savings and time deposits. Therefore, for that period the table reports the weighted average interest rate on appropriated statutory reserve funds (column 3). From October 8, 1993 until the end of February 1994, the CNB paid no interest on appropriated statutory reserve funds, and since March 1994, uniform rate has been applied to these funds.

Interest rates on CNB bills on an obligatory basis are set by a decision of the Council of the CNB.

Until October 1993, interest rates on CNB bills on a voluntary basis were also set by the Council of the CNB, while since November 1993, they have been set at CNB bills' auction sales. Congruently, since November 1993, columns 5, 6 and 7 report weighted average interest rates attained at auctions of CNB bills.

Until October 1994, interest rates on CNB bills on a voluntary basis due in 30 and 90 days are reported in columns 6 and 7, respectively. From November 1994 through January 2001, columns 7 and 9 report interest rates on CNB bills on a voluntary basis due in 91 and 182 days, respectively.

Since April 1998 columns 9 through 13 report weighted average interest rates on CNB bills on a voluntary basis in EUR and USD (until December 1998 in DEM and USD) attained at CNB bills' auctions as a weighted average of subscribed amounts in those two currencies.

Table F3: Deposit Money Banks' Reserve Requirements

This table shows data on monthly averages of day-to-day balances of DMBs' kuna and foreign currency reserve requirements with the CNB. Savings banks are included beginning in July 1999.

Column 3 shows the weighted average reserve requirement ratio as a percentage of the kuna and foreign currency reserve requirement in the reserve base.

Reserve requirement (column 4) represents the prescribed amount of funds banks are required to deposit in a special statutory reserve account with the CNB, or to maintain (in average) in their settlement accounts and in vaults, or in accounts of liquid foreign exchange claims (which include foreign currency cash and checks in foreign exchange, liquid foreign exchange claims maintained in the accounts with the high-grade foreign banks and foreign currency CNB bills).

Column 5 shows the amount of kuna reserve requirements. Between January 1995 and December 2000, this amount corresponded with the statutory reserve requirement instrument, while until December 1994 it comprised two instruments: statutory reserves and liquid assets requirement - LAR (except for the part in which banks were conforming to this requirement by registering CNB bills on a voluntary basis). In December 2000, reserve requirements in kuna and in foreign currency were unified, i.e. reserve requirements rate, periods for calculating, allocating and maintaining reserve requirements were unified, as well as a minimum percentage of the total reserve requirements deposited with the Croatian National Bank. Starting from September 2001, column 5 includes also the f/c component of reserve requirements that is set aside/maintained in kuna.

Column 6 shows the amount of foreign currency reserve requirements, i.e. the prescribed amount of funds banks are required to deposit in a special statutory reserve account with the CNB, or to main-

tain (in average) in accounts of liquid claims. Until November 2000, the calculation base consisted of average daily balances of household foreign exchange savings deposits with a remaining maturity of up to 3 months, while starting from December 2000 the base consists of foreign exchange sources of funds, including: ordinary foreign exchange accounts, special foreign exchange accounts, sight foreign exchange accounts and savings deposits, received foreign exchange deposits and received foreign exchange loans, as well as obligations arising from securities issued in foreign exchange (excluding the bank's equity securities). Starting from November 2001, the base includes also hybrid and subordinated instruments.

Column 7 shows the total amount of other obligatory deposits with the CNB, including CNB bills on an obligatory basis, those CNB bills on a voluntary basis used by banks to maintain the prescribed minimal liquidity (LAR), special statutory reserves (until July 1995) and statutory reserves on f/c deposits, f/c credits from foreign banks and guarantees for such credits.

Column 8 shows the portion of the kuna reserve requirement which banks deposit in a special statutory reserve account with the CNB (until December 1994 this amount corresponded with the statutory reserve instrument, while since January 1995 a minimum percentage of the total reserve requirement banks are required to deposit in a special statutory reserve account with the CNB has been prescribed). This percentage currently stands at 40%.

Column 9 shows the portion of the foreign currency reserve requirement which banks deposit in a special statutory reserve account with the CNB. The minimum percentage of the total reserve requirement banks are required to deposit in a special statutory reserve account with the CNB currently stands at 40%.

Column 10 shows the weighted average remuneration rate on all forms of immobilized funds which include reserve requirements and

other obligatory deposits with the CNB.

Column 11 shows the weighted average remuneration rate on total immobilized funds in foreign currency. The Croatian National Bank pays remuneration equaling the average interest earned on placements abroad on the calculated foreign currency reserve requirement deposited in the foreign exchange accounts with the Croatian National Bank.

Table F4: Deposit Money Banks' Liquidity Indicators

The table reports monthly averages of day-to-day balances of some indicators of DMBs' liquidity. Savings banks are included beginning in July 1999.

Column 3 shows free reserves in kuna, defined as bank's total reserves (in settlement accounts and in vaults) decreased by the minimal average settlement account and vault balance, as prescribed by instruments of the CNB.

Column 4 shows free reserves in foreign currency, defined as funds for the maintenance of foreign currency reserve requirements (foreign currency cash and checks in foreign exchange, liquid foreign exchange claims maintained in the accounts with the high-grade foreign banks and foreign currency CNB bills) decreased by the minimal required balance of these funds in the same period.

Column 5 shows the primary liquidity ratio as a percentage of

monthly day-to-day kuna free reserves averages (column 3) in monthly day-to-day averages of deposits which constitute the reserve base.

Column 6 shows the monthly average of day-to-day balances of secondary liquidity sources used. Secondary liquidity sources comprise: use of statutory reserves (until October 1994), regular loans for maintenance of day-to-day liquidity (until November 1994), use of funds exceeding those available in the bank's giro account (until October 1994), special credits for overcoming liquidity problems (initial credits, credits for overcoming liquidity problems of banks under evaluation for entry into rehabilitation and restructuring procedures), lombard credits (since December 1994), intervention credits for overcoming liquidity problems (since October 1994), short-term liquidity credits (since February 1999), as well as overdue liabilities to the CNB.

Column 7 reports the monthly average of day-to-day balances of kuna CNB bills on a voluntary basis (until December 1994, this amount is decreased by the portion of voluntarily registered CNB bills used by banks to maintain the prescribed minimal liquidity).

Column 8 reports the monthly average of day-to-day balances of foreign currency CNB bills on a voluntary basis (EUR and USD).

Column 9 reports the monthly average of day-to-day balances of kuna treasury bills. Until September 2002, it shows the discounted value of treasury bills, while starting from October 2002, it shows their nominal value.

Table G1: Deposit Money Banks' Interest Rates on Kuna Credits Not Indexed to Foreign Currency

Relative significance ^a		–	–	64.00	58.08	26.93	31.15	30.47	0.67	5.92	2.12	3.80	

^a Relative significance is calculated as a percentage of corresponding credit category in total credits disbursed in the reporting month (according to data for the last period included in the table).

Note: A break in the time series occurred due to changes in the methodology used in interest rate statistics as of 1 January 2001. This especially refers to interest rates shown in columns 5, 6 and 7. Interbank credits, which bear relatively low interest rates, were, among others, excluded from short-term credits to enterprises. The increase in interest rates was also caused by the weighting method: all categories are weighted by the amounts of newly-granted credits, except credit lines whose relative share grew in the new coverage, which are weighted by book balances.

Table G1: Deposit Money Banks' Interest Rates on Kuna Credits Not Indexed to Foreign Currency

The table contains weighted averages of DMBs' and savings banks' monthly interest rates on kuna credits not indexed to f/c, reported on a yearly basis.

Up to December 2001, data refer to weighted averages of DMBs' monthly interest rates on kuna credits not indexed to f/c granted to legal persons (which included enterprises, the public sector, financial institutions, non-profit institutions and non-residents) and households, reported on a yearly basis. Savings banks are not covered.

Starting from January 2002, data refer to weighted averages of DMBs' and savings banks' monthly interest rates on kuna credits not indexed to f/c granted only to enterprises (public and other) and households, reported on a yearly basis.

Up to February 1996, columns 3 and 4 showed interest rates on the interbank money market, according to information published by the Zagreb Money Market (ZMM). Starting from March 1996, interest rates on the money market are calculated as weighted monthly averages of weighted daily interest rates and shown separately for trading in over-

night credits and trading in other credits on the ZMM. In the period between May 1998 and January 2001, the repayment of credits granted on the interbank overnight market was guaranteed by DMBs' required reserves with the CNB. Columns 5 through 13 show weighted averages of DMBs' and savings banks' monthly interest rates classified by maturity and sectors. Interest rates on short-term credits to enterprises also include interest rates on callable loans.

Data on DMBs' and savings banks' interest rates on kuna credits not indexed to f/c are based on DMBs' and savings banks' periodic reports. The basis for calculation of weighted averages are amounts of credits bearing corresponding interest rates, which were disbursed during the reporting month, with the exception of interest rates on giro and current account credit lines, for which weighted averages were calculated based on the balance of these loans at the end of the reporting month.

Relative significance of particular interest rates (reported in the last line of the table) refers to data for the last period included in the table. It is calculated as a percentage of the corresponding credit category (to which exchange rates apply) in total credits included in the calculation of weighted averages for that period.

Table G2: Deposit Money Banks' Interest Rates on Kuna Credits Indexed to Foreign Currency and on Credits in Euros

Weighted averages of monthly interest rates, in % on annual basis

Year	Month	Interest rates on kuna credits indexed to foreign currency									Interest rates on credits in euros

Relative significance ^a		32.16	6.11	4.45	1.65	26.06	6.48	19.58	5.64	13.94	3.84	2.47	1.37

^a Relative significance is calculated as a percentage of corresponding credit category in total credits disbursed in the reporting month (according to data for the last period included in the table).

Table G2: Deposit Money Banks' Interest Rates on Kuna Credits Indexed to Foreign Currency and on Credits in Euros

The table contains weighted averages of DMBs' and savings banks' monthly interest rates on kuna credits indexed to f/c and on credits in euros, reported on a yearly basis.

Up to December 2001, data refer to weighted averages of DMBs' monthly interest rates on kuna credits indexed to f/c and on credits in euros (or German marks) granted to legal persons (which included enterprises, the public sector, financial institutions, non-profit institutions and non-residents) and households, reported on a yearly basis. Savings banks are not covered.

Starting from January 2002, data refer to weighted averages of DMBs' and savings banks' monthly interest rates on kuna credits indexed to f/c and on credits in euros granted only to enterprises (public and other) and households, reported on a yearly basis.

Data on DMBs' and savings banks' interest rates on kuna credits indexed to f/c and on credits in euros are based on DMBs' and savings

banks' periodic reports. The basis for calculation of weighted averages are amounts of credits bearing corresponding interest rates, which were disbursed during the reporting month.

Columns 3 through 11 show weighted averages of DMBs' and savings banks' monthly interest rates classified by maturity and sectors. Interest rates on short-term credits to enterprises also include interest rates on callable loans.

Up to December 2001, interest rates on credits in euros (columns 12, 13 and 14) refer to credits released in German marks in the reporting month, and starting from January 2002, they refer to credits released in euros, while weighted averages are calculated based on their kuna equivalent using current exchange rate. Credits released in other currencies are not included in this table.

Relative significance of particular interest rates (reported in the last line of the table) refers to data for the last period included in the table. It is calculated as a percentage of the corresponding credit category (to which exchange rates apply) in total credits included in the calculation of weighted averages for that period.

Table G3: Deposit Money Banks' Interest Rates on Kuna Deposits Not Indexed to Foreign Currency

2003	January	1.61	0.92	3.45	3.34	4.21	2.77	6.62	7.27	1.53
	February	1.64	0.60	3.07	3.43	4.31	2.87	6.45	6.68	1.33
	Relative significance ^a	42.76	34.37	4.80	4.67	1.81	2.86	0.12	0.12	0.01

^a Relative significance is calculated as a percentage of corresponding deposit category in total deposits received in the reporting month (according to data for the last period included in the table).

Table G3: Deposit Money Banks' Interest Rates on Kuna Deposits Not Indexed to Foreign Currency

The table contains weighted averages of DMBs' and savings banks' monthly interest rates on kuna deposits not indexed to f/c, reported on a yearly basis.

Up to December 2001, data refer to weighted averages of DMBs' monthly interest rates on kuna deposits not indexed to f/c received from legal persons (which included enterprises, the public sector, financial institutions, non-profit institutions and non-residents) and households, reported on a yearly basis. Savings banks are not covered.

Starting from January 2002, data refer to weighted averages of DMBs' and savings banks' monthly interest rates on kuna deposits not indexed to f/c received from enterprises (public and other) and households, reported on a yearly basis.

Data on DMBs' and savings banks' interest rates on kuna deposits not indexed to f/c are based on DMBs' and savings banks' periodic reports.

Column 3 reports weighted averages of monthly interest rates on total kuna deposits (giro and current accounts, household savings deposits and time deposits) not indexed to f/c. Column 4 shows weighted

averages of monthly interest rates on deposits in giro and current accounts not indexed to f/c received from enterprises (until December 2001, all legal persons) and households, and column 5 shows weighted averages of monthly interest rates on total time deposits not indexed to f/c.

The basis for calculation of weighted averages for kuna time deposits not indexed to f/c are the amounts of those deposits received during the reporting month. The basis for calculation of weighted averages for deposits in giro and current accounts are the end-of-month book balances of those deposits. Weighted averages of interest rates on total kuna deposits not indexed to f/c (column 3) are weighted by the end-of-month balances of all categories included in the calculation.

Kuna and foreign currency deposits used as collateral for credit are included, while restricted deposits (deposits used for payment of imports and other restricted deposits) are not included into the calculation of weighted averages.

Relative significance of particular interest rates (reported in the last line of the table) refers to data for the last period included in the table. It is calculated as a percentage of the corresponding deposit category (to which exchange rates apply) in total deposits included in the calculation of weighted averages for that period.

Table G4a: Deposit Money Banks' Interest Rates on Kuna Deposits Indexed to Foreign Currency and on Foreign Currency Deposits

Weighted averages of monthly interest rates, in % on annual basis

Year	Month	Interest rates on savings and time deposits indexed to f/c				Interest rates on foreign currency deposits

	February	3.15 ^b	2.82	5.17	2.50	0.45	0.47	0.31	0.54	0.30	
Relative significance ^a		2.24	1.67	0.12	55.00	36.03	26.17	4.84	3.94	1.09	

^a Relative significance is calculated as a percentage of corresponding deposit category in total deposits received in the reporting month (according to data for the last period included in the table). ^b Of the total amount of deposits to which this interest rate refers, 64.62 percent refers to enterprises.

Table G4 a and b: Deposit Money Banks' Interest Rates on Kuna Deposits Indexed to Foreign Currency and on Foreign Currency Deposits

The table contains weighted averages of DMBs' and savings banks' monthly interest rates on kuna deposits indexed to f/c and on foreign currency deposits, reported on a yearly basis.

Up to December 2001, data refer to weighted averages of DMBs' monthly interest rates on kuna deposits indexed to f/c and on foreign currency deposits received from legal persons (which included enterprises, the public sector, financial institutions, non-profit institutions and non-residents) and households, reported on a yearly basis. Savings banks are not covered.

Starting from January 2002, data refer to weighted averages of DMBs' and savings banks' monthly interest rates on kuna deposits indexed to f/c and on foreign currency deposits received from enterprises (public and other) and households, reported on a yearly basis.

Data on DMBs' and savings banks' interest rates on kuna deposits indexed to f/c and on foreign currency deposits are based on DMBs' and savings banks' periodic reports.

Column 3 reports weighted averages of monthly interest rates on total kuna savings and time deposits indexed to f/c received from enterprises (until December 2001, all legal persons) and households, whereas weighted averages of monthly interest rates on time deposits are shown in columns 4 (short-term deposits) and 5 (long-term deposits) respectively.

Up to December 2001, interest rates on foreign currency deposits

refer to deposits received in German marks or US dollars, and starting from January 2002, they refer to deposits received in euros and US dollars, while weighted averages are calculated based on their kuna equivalent using current exchange rate. Deposits received in other currencies are not included in this table.

The basis for calculation of weighted averages for kuna time deposits indexed to f/c and foreign currency time deposits are the amounts of those deposits received during the reporting month. The basis for calculation of weighted averages for savings deposits indexed to f/c are the end-of-month book balances of those deposits. Starting from January 2002, weighted averages of interest rates on total kuna deposits indexed to f/c (column 3) are weighted by the end-of-month balances of all categories included in the calculation.

The average interest rate on total foreign currency deposits (column 6) refers to the weighted average of monthly interest rates on savings and time deposits, which are weighted by the end-of-month balances of all categories included in the calculation.

The basis for calculation of weighted averages of monthly interest rates on total foreign currency savings deposits (column 7) are the end-of-month balances of those deposits.

The basis for calculation of weighted averages of monthly interest rates on total foreign currency time deposits (column 12) are the amounts of those deposits received during the reporting month. The same basis is applied in calculating weighted averages of monthly interest rates on total short-term foreign currency deposits (column 13) and on total long-term foreign currency deposits (column 18).

Relative significance ^a		18.97	16.88	11.27	1.68	2.36	1.57	2.09	1.70	0.29	0.10	0.00

^a Relative significance is calculated as a percentage of corresponding deposit category in total deposits received in the reporting month (according to data for the last period included in the table).

Relative significance of particular interest rates (reported in the last line of the table) refers to data for the last period included in the table. It is calculated as a percentage of the corresponding deposit category

(to which exchange rates apply) in total deposits included in the calculation of weighted averages for that period.

Table G5: Deposit Money Banks' Trade with Foreign Exchange

Data on trade with foreign exchange between DMBs comprise transactions of purchase and sale of foreign exchange on domestic foreign currency market. The transactions are classified by categories of participants (legal and natural persons, banks, CNB). Source of data are

DMBs' periodic reports on trading with foreign exchange, sent to the CNB on a regular basis. The amounts are stated in the euro (EUR), converted from other foreign currencies using the CNB's midpoint exchange rate (reporting period average). Other Croatian National Bank transactions include foreign exchange sales and purchases on behalf of the Ministry of Finance.

^a Preliminary data. ^b Revised data.

Table H1-H5: Balance of Payments

The balance of payments is compiled in accordance with the recommendations of the International Monetary Fund (Balance of Payments Manual, Fifth Edition, 1993). Data sources include: reports of the Central Bureau of Statistics, the Croatian Institute for Health Insurance, the Institute for Payment Transactions, banks, enterprises and the Croatian National Bank, as well as research by the Institute for Tourism and the Croatian National Bank.

Balance of payments of the Republic of Croatia data are recorded in US dollars (USD) and domestic currency (HRK). The balance of payments in both reporting currencies is compiled using the same sources of information and the same principles regarding the scope of transactions covered and the procedures for composing particular positions. Depending on the sources of data available, conversion of transaction values from the original currencies into reporting currencies is performed:

- by applying the midpoint exchange rate of the Croatian National Bank on the date of the transaction;
- by applying monthly and quarterly average midpoint exchange rates of the Croatian National Bank;
- by applying the average monthly exchange rate versus the US dollar when assessing transactions representing the difference between balances evaluated according to the exchange rate applicable at the end of the period.

Exports and Imports are shown on an f.o.b. basis. The basic data source for these items is the Report of the Central Bureau of Statistics on merchandise foreign trade of the Republic of Croatia. The data of the Central Bureau of Statistics are modified in accordance with the compilation method of the IMF: merchandise imports, which are shown in the Central Bureau of Statistics' report in c.i.f. terms, are corrected to f.o.b. (corrected for classification) and both imports and exports are corrected so that the coverage includes goods defined as such in the balance of payments methodology but not included in the statistics on merchandise trade.

Regarding exports, beginning with the first quarter of 1999, coverage has been increased via estimates on purchases by individual foreign travelers in the Republic of Croatia. These estimates are based on the Survey on Consumption of Foreign Travelers in Croatia, carried out jointly by the Croatian National Bank and the Institute for Tourism. Regarding imports, the difference between c.i.f. and f.o.b. is estimated on the basis of research studies of the CNB on samples of the largest and large importers, and the resulting value of f.o.b. imports is adjusted on the basis of foreign payments for repairs of ships and supply purchases in foreign ports, as well as estimates on purchases by individual Croatian citizens abroad, obtained via a research study of the CNB. From the first quarter of 1999 on, estimates are based on the Survey on Consumption of Domestic Travelers Abroad, carried out jointly by the Croatian National Bank and the Institute for Tourism. For the 1993 to 1996 period, merchandise imports from the merchandise trade statis-

^a Preliminary data. ^b Revised data.

tics are modified by estimates on imports in duty-free zones (prepared by the CNB), while from 1997 on, data on these imports are included in the merchandise trade statistics.

Beginning with the first quarter of 1999, income and expenditures from transport services are compiled on the basis of data from a new CNB research project on international transport services, with two exceptions: first, income and expenditures from road transport are compiled via data on realized foreign payments, and second, a portion of expenditures on transport services for transport of goods imported to the Republic of Croatia are based on a survey of the largest and large Croatia importers. This survey is carried out in the context of the reformulation of data on imports from a c.i.f. to an f.o.b. basis.

Income from travel-tourism is calculated on the basis of the Survey on Consumption of Foreign Travelers in Croatia starting in the first quarter of 1999. This survey is carried out jointly by the Croatian National Bank and the Institute for Tourism. Additional data from the Croatian Institute for Health Insurance on health services provided to non-residents is also used.

Expenditures from travel-tourism are, starting in the first quarter of 1999, based on the results of the Survey on Consumption of Domestic Travelers Abroad, and supplemented by data on foreign exchange expenditures of the Croatian Institute for Health Insurance.

Item Other services includes data from the foreign payments statistics which relate to investment projects abroad, representation fees, insurance services, delivery services, postal services and the costs of Croatian representative offices overseas. To this category is added a part of unclassified services which can be explained as a linear trend, as well as estimates on expenditures of international peacekeeping and humanitarian missions for goods and services in the Republic of Croatia, based on a research by the Croatian National Bank.

The income account includes data from the foreign payments statistics on compensation of employees, payments on the basis of interest, data from the CNB's research on income paid from foreign direct and portfolio investment of the private sector, Croatian National Bank data and Institute for Payment Transactions data on income paid from foreign portfolio investment in the official sector and estimates on resi-

dents' income from factor services to peacekeeping and humanitarian missions in the Republic of Croatia, based on the research of the Croatian National Bank for the period 1993 to 1996, data on foreign direct investment do not include data on retained profit.

Current transfers to the government include data from the foreign payments statistics on the payment of pensions and other social transfers, monetary support and gifts, as well as data from the merchandise trade statistics of the Republic of Croatia on imports and exports of goods without payment obligation.

Income from transfers to other sectors includes data from the foreign payments statistics on the total value of foreign exchange transfers received from abroad. To this is added an estimate on unregistered transfers. For the 1993 to 1998 period, this estimate is seen as 15% of the difference between the unexplained foreign exchange inflows and outflows of the household sector. Beginning with the first quarter of 1999, data on buy-out of foreign exchange cheques from domestic natural persons are also included.

The foreign exchange receipts of the household sector include the purchase of foreign cash at exchange offices from residents and deposits of foreign cash in foreign exchange accounts of residents at domestic banks. Payments made abroad and income earned through business trips, education and training, tourist receipts and other tourist income are added to this. The total inflow is decreased by: estimated tourist income and estimates on purchases by individual foreign tourists in the Republic of Croatia (Survey on Consumption of Foreign Tourists in Croatia, carried out jointly by the Croatian National Bank and the Institute for Tourism) plus estimated consumption of goods and services by members of peacekeeping and humanitarian missions in the Republic of Croatia.

The foreign exchange expenditures of the household sector include purchases of foreign cash from exchange offices and withdrawals of foreign cash from households' foreign exchange accounts at domestic banks. Realized foreign payments and expenditures from business trips, education and training, tourist payments and other tourist expenditures are added to this. The total outflow is decreased by: individuals' expenditures for goods abroad and expenditures for foreign tourism by

^a Preliminary data.

residents (Survey on Consumption of Domestic Travelers Abroad, which is carried out jointly by the Croatian National Bank and the Institute for Tourism). Expenditures on transfers of other sectors are based on foreign payments statistics data on the total value of foreign exchange transfers abroad.

Capital accounts are compiled from data on realized foreign payments by migrants (income and expenditures).

Foreign direct and portfolio investment includes data on those investments from the research of the CNB and data from the securities register of the official sector (central bank and central government) at the Croatian National Bank and the Institute for Payment Transactions. In the 1993 to 1996 period, data on foreign direct investment of the private sector (banks and other sectors) did not include direct foreign debt investment, nor retained profit of the investor.

Other investment is classified according to the following institutional sectors: the Croatian National Bank, government, banks and other. The government sector comprises central government and funds, local government authorities and local funds. The banking sector comprises DMBs.

Item Assets - Trade credits has been compiled since the first quarter of 1996. It includes advances paid for goods imports by Croatian importers. Starting in the first quarter of 1999, it includes loans with a maturity below 90 days given by Croatian exporters to foreign buyers as well as long-term and short-term (from 91 days to 1 year) trade credits granted to the government and other sectors.

Item Assets - Loans includes data on loans granted abroad, classified according to institutional sectors. The data are obtained from statistics on foreign credit relations of the Croatian National Bank, which are based on concluded credit agreements registered with the Croatian National Bank.

Item Assets - Currency and deposits - Banks in the 1993 to 1998 period shows the change in the total liquid foreign exchange of banks authorized to do business abroad reduced by the amount of foreign exchange deposited by DMBs with the CNB in fulfillment of a part of their reserve requirements. Beginning with the first quarter of 1999,

transaction-based changes are estimated by converting changes in the original currencies into US dollar changes using the average monthly exchange rate of currencies held in the banks' assets against the US dollar. Item Assets - Currency and deposits - Other sectors, in the 1993 to 1998 period includes a part of the net foreign exchange inflows of the household sector which is not classified on the current account, and which amounts to 85% of the unexplained foreign exchange inflows to the household sector. Beginning with the first quarter of 1999, this item is no longer estimated.

Item Liabilities - Trade credits has been compiled since the first quarter of 1996, and includes data on loans with a maturity below 90 days granted by foreign suppliers to Croatian importers. From the first quarter of 1999 on, this item includes data on advances granted by foreign purchasers to Croatian exporters for exports of goods, as well as data on long-term and short-term (from 91 days to 1 year) trade credits received by the government and other sectors.

Data on credits received from abroad and corresponding arrears are shown by institutional sectors. They are obtained from statistics on foreign credit relations of the Croatian National Bank, which are based on concluded credit agreements registered with the Croatian National Bank.

Item Liabilities - Currency and deposits includes changes in those foreign exchange and kuna foreign liabilities of the monetary authorities (CNB) and banks based on current accounts, time and notice deposits, sight deposits and demand deposits.

Changes in the international reserves of the Croatian National Bank on a transactions basis are estimated using accounting data on the stock of foreign exchange reserves in particular currencies at the end of the month. In the estimate on transactions in the period from 1993 to the fourth quarter of 1998, changes in the original currencies were transformed into dollar changes using the average monthly exchange rate of the currency in question against the US dollar. Starting from the first quarter of 1999, the source of data on changes in international reserves has been a Report on International Reserves Transactions compiled by the CNB Accounting Department.

Table H6: International Reserves and Banks' Foreign Exchange Reserves

The international reserves of the Croatian National Bank are shown according to the methodology contained in the Balance of Payments Manual (International Monetary Fund, 1993), and include those foreign claims of the Croatian National Bank that can be used to bridge imbalances in international payments. International reserves include

special drawing rights, reserve position in the International Monetary Fund, gold, foreign currency and deposits with foreign banks, as well as bonds and debt instruments.

The foreign exchange reserves of commercial banks include foreign currency and domestic commercial banks' deposits with foreign banks. These foreign exchange reserves represent an additional source of liquidity for bridging imbalances in international payments.

^a Until January 2001: Currency structure of official reserve assets and other foreign currency assets. ^b In accordance with the recommendation made by the IMF, time deposits with a maturity over 3 months were also included in Official reserve assets (I.A.). These deposits were previously included in Other foreign currency assets (I.B.).

Table H7: International Reserves and Foreign Currency Liquidity

International reserves and foreign currency liquidity are shown in accordance with a Template on International Reserves and Foreign Currency Liquidity, drawn up by the IMF. A detailed explanation of the Template is given in "Data Template on International Reserves and Foreign Currency Liquidity – Operational Guidelines, October 1999" issued by the IMF.

The first part of the Template shows total assets of the Croatian National Bank in convertible foreign currency. Official reserve assets (I.A.) show those types of assets that are readily available to the CNB at any moment for bridging imbalances in international payments. Official international reserves include: short-term foreign negotiable debt securities, foreign cash, foreign currency sight deposits, foreign currency time deposits which can be withdrawn before maturity, foreign currency time deposits with a remaining maturity of up to 1 year, reserve position with the IMF, special drawing rights, gold, and reverse repos with foreign negotiable debt securities. Other foreign currency assets of the CNB (I.B.) include foreign currency time deposits with a maturity over 3 months.

The second part of the Template shows fixed predetermined foreign currency net liabilities of the Croatian National Bank and the central government (excluding extrabudgetary funds) that fall due in the next 12 months. Foreign currency loans, securities and deposits (II.1.) include future interest payments on banks' foreign currency reserve requirements with the CNB (only interest payments for the next month are included), payments of future maturities of foreign currency CNB bills, future principal and interest payments on loans from the IMF, and future principal and interest payments on the central government's foreign currency debts (excluding extrabudgetary funds). Aggregate short and long positions in forwards and futures in foreign currencies (II.2.)

include future collections (+) or payments (–) arising from currency swaps between the CNB and domestic DMBs (temporary sale or purchase of foreign currency). Item Other (II.3.) includes future payments arising from repo agreements with foreign negotiable debt securities.

The third part of the Template shows predetermined contingent foreign currency net liabilities of the Croatian National Bank and the central government (excluding extrabudgetary funds), which fall due in the next 12 months. Contingent liabilities in foreign currency (III.1.) include future principal and interest payments on foreign loans guaranteed by the central government, and banks' foreign currency reserve requirements. (The inclusion of reserve requirements in foreign currency is based on the assumption that there will be no changes in ratios or in the base of foreign currency reserve requirements, which comprises households' deposits in foreign currency with remaining maturity of up to 3 months). Undrawn credit lines show potential inflows (+) or outflows (–) which would arise from drawdowns under these credits.

The fourth part of the Template lists memo items. Short-term, domestic currency debt indexed to foreign currency (IV.a) shows obligations arising from the Law on Converting Households' Foreign Exchange Deposits into the Public Debt of the Republic of Croatia, which fall due in the next 12 months. Pledged assets (IV.c) show time deposits in foreign currency with a maturity over 3 months listed in item I.B. which are also a pledge. Repo transactions with securities show the value of collateral that is the subject of repo agreements and reverse repo transactions with securities as well as how these transactions are registered in the Template. Until December 2000, the currency structure of international and other foreign currency reserves showed the currency structure of the total foreign currency assets of the CNB (section I.). From January 2001, the currency structure refers to official reserve assets (section I.).

^a Preliminary data.

Note: From 1 January 2001, the euro-zone related price series includes Greece as well.

Table H10: Indices of the Effective Exchange Rate of the Kuna

The index of the nominal effective exchange rate of the kuna is a weighted geometric average of the index of bilateral exchange rates of the kuna against the euro, US dollar, Swiss franc, British pound and Slovenian tolar. The weights are determined based on the average share of a particular foreign currency in the structure of the current account of the balance of foreign currency transactions between July 1996 and January 2000. The year 1995 is a base period for calculating the index. The index of the nominal effective exchange rate is an aggregate indicator of the average value of the domestic currency against a basket of currencies. An increase in the index of the nominal effective

exchange rate of the kuna in a certain period indicates that the kuna has depreciated against the basket of currencies. The index of the real effective exchange rate is a weighted geometric average of the index of bilateral exchange rates of the kuna corrected for the relevant relative price indices (the ratio of price indices in partner countries and domestic prices). Producer price and retail price indices are used, in particular the total harmonized retail price index for the Economic and Monetary Union member countries. Data for the last two months are preliminary. The historical data may be corrected for the subsequent changes in the data published by the statistical offices of the countries whose prices are included in the calculation of the index of the real effective exchange rate of the kuna.

Table H11: External Debt by Domestic Sectors

According to a new methodology in force starting in March 2000, external debt is defined as the total of liabilities of residents, including: deposits of foreign legal and natural persons (these deposits were not included under the old methodology), loans granted by foreigners with an original maturity longer than 150 days (up to July 11, 2001, this maturity was 90 days), loans for financial purposes, counted exceptionally regardless of their maturity, and bonds and money market instruments issued on foreign markets (at face value).

External debt by domestic sectors is shown in the same manner as in the Capital and Financial Account of the BOP: Direct investment includes borrower – lender transactions of other sectors that are interrelated by ownership (borrower or lender owns more than 10 percent of the other). Item Government shows external debt of the broadly defined government sector, which includes the central government, gov-

ernment funds (including the Croatian Bank for Reconstruction and Development), as well as local government authorities and funds. Item Croatian National Bank shows the central bank debts. Item Banks shows debts of banks and saving banks. Item Other sectors consists of other financial institutions (other than banks and savings banks), enterprises and households.

Each sector is further divided into Portfolio and other investment. Portfolio investment includes bonds and money market instruments. Other investment includes Currency and deposits (foreign deposits) and Credits. Credits are divided into Trade credits (sale of goods for delayed payment) and Credits (all other credit obligations).

Outstanding external debt is expressed in millions of US dollars according to the CNB's midpoint exchange rate at the end of the period.

The debt balance includes so-called non-reported principal payments (they should have been paid but are not statistically reported as paid) and future principal payments.

Table H13: External Debt by Domestic Sectors and Projected Future Payments

The Table shows outstanding external debt at the end of the period and the principal and interest payment projection. All data are shown at the midpoint exchange rate of the CNB at the end of period.

Projected interest payments do not include interest on deposits from nonresidents and late interest. Payments are projected at the interest rates at the contracting time and do not reflect changes of vari-

able interest rates.

The note points out the outstanding publicly guaranteed debt – total and the outstanding debt of the banking sector and other sectors covered by government guarantees. The difference is the amount of the government guarantees issued to the government sector (for example the Croatian Bank for Reconstruction and Development, Croatian Roads Administration, etc. included in a broad definition of the government sector).

^a Preliminary data. ^b Revised data.

Table H14: International Investment Position

This table is made in accordance with the recommendations of the IMF (Balance of Payments Manual, Fifth Edition, 1993). Data sources include: reports from banks, enterprises, the Croatian National Bank, and the Zagreb Stock Exchange.

Data on international investments of the Republic of Croatia and international investments into the Republic of Croatia are recorded in US dollars (USD). Depending on the sources of data available, the conversion of values from the original currencies into US dollars is performed:

- by applying the current rate of exchange or the average monthly midpoint exchange rate of the Croatian National Bank to transactions;
- by applying the midpoint exchange rate of the Croatian National Bank on the reporting date to balances.

The source of data on foreign direct and portfolio equity investment is the statistical research of the Croatian National Bank. The equity investments have been monitored since the beginning of 2001 and are corrected for changes in the official index of the Zagreb Stock Exchange (CROBEX).

Portfolio debt investment and other investment are classified according to the following institutional sectors: the Croatian National Bank, government, banks and other sectors. The government sector comprises central government and funds, local government authorities and local funds. The banking sector comprises DMBs.

Item Portfolio debt investment – Assets and liabilities comprises data on investments of residents into debt securities issued by nonresi-

dents (assets) and investments of nonresidents into debt securities issued by residents (liabilities). The source of data is the register of foreign credit relations kept by the Croatian National Bank, which also comprises claims and liabilities arising from bonds and money market instruments.

Item Other investment – Trade credits – Assets and liabilities comprises foreign claims and foreign liabilities of the said sectors arising from trade credits. The source of data is the register of foreign credit relations kept by the Croatian National Bank.

Item Other investment – Loans – Assets and liabilities comprises data on loans granted and received between residents and nonresidents classified according to institutional sectors. The source of data is the register of foreign credit relations kept by the Croatian National Bank.

Item Other investment – Currency and deposits – Assets shows the total liquid foreign exchange of banks authorized to do business abroad reduced by the amount of foreign exchange deposited by DMBs with the CNB in fulfillment of a part of their reserve requirements. In addition to DMBs' foreign claims, foreign claims of the government sector are also shown. The sources of data are reports from the government and banks.

Item Other investment – Currency and deposits – Liabilities shows the total foreign exchange and kuna liabilities of the said sectors abroad arising from current accounts, time and notice deposits, sight deposits and demand deposits. The sources of data for this item are reports from banks.

Item International reserves of the CNB is compiled on the basis of the CNB Accounting Department reports which contain data on their balances and changes.

Table I3: Central Government Debt

Data on the central government debt are gathered from available data and are not reconciled with the Ministry of Finance of the Republic of Croatia. The central government debt consists of domestic and external debt. The sources of data on domestic debt of the central government are the following: the Ministry of Finance Monthly Statistical

Review, Monetary Authorities Accounts and Deposit Money Banks' Accounts. The source of data on the central government external debt is the external debt statistics collected by the CNB. The supplement provides data on the central government guaranteed debt. DMBs are the source of data on guarantees for domestic debt, while the external debt statistics collected by the CNB are the source of data on guarantees for external debt.

Source: Central Bureau of Statistics.

Table J2: Core Retail Prices Indices

The Central Bureau of Statistics calculates the core retail price index in the manner that agricultural products prices and administrative prices (which among others include the prices of electricity and refined petroleum products) are excluded from the basket of goods and ser-

vices used in the calculation of the retail price index. A total of 88 goods and services are excluded and their share in the retail price basket stands at 22.06% in 2001 (of which: agricultural products account for 2.28 percentage points, and administrative prices for 19.78 percentage points). The zero weighting method is used to exclude prices and goods.
