## MANUFACTURING INDUSTRY

The main characteristic of developments in industrial production in March was the weakened influence of the January growth impulse, which had obviously been induced by statistical factors (change of weights) and by the growth of inventories of finished products. The stochastic trend is showing slight growth tendencies, first noticed last fall.

In total, industrial production in the first quarter of 1996 was 0.1% lower than in the first quarter of 1995, and 0.4% higher than the average level in 1995. The production of investment goods continues to be the most propulsive part of the industrial sector, recording a quarterly growth of 5.4% on the year-on-year level. The intermediate goods industry records stagnation, while the consumer goods industry records a decrease of 1.3%. That decrease was caused by recession in the labour intensive, export-oriented industries, where the difference between the value of marginal product of labour and its price is the greatest, as noted in previous issues of this Bulletin.

Accordingly, there were no unforeseen developments in the industrial sector. The following would probably be a realistic interpretation of developments: the fact that industrial production in the first quarter of 1996 is back to levels attained at the beginning of 1995 (slightly higher than the average 1995 level) can be considered a success. Keeping in mind that there has been a recession in industry since May 1995, while mild growth fuelled by an increase in aggregate demand is expected to continue in May 1996, the predicted 4%

### MANUFACTURING PRODUCTION INDEX

**NUMBER OF UNEMPLOYED PERSONS AND RATE OF UNEMPLOYMENT RELATIVE TO LABOUR FORCE**

**CASH FLOW OF REAL VALUE ADDED COMPONENTS IN MANUFACTURING SECTOR - Constant prices, January 1992**

growth of industrial production on a yearly level is still realistic.

This conclusion is supported by tendencies in inventories of finished products in manufacturing industry. The last two months of 1995 were characterized by rapid accumulation of finished product inventories. Such growth is obviously correlated with the turn of the trend-cycle of industrial production. January data indicate slower growth of inventories of finished products. If later data should also show a slowdown in the growth of inventories in the first quarter of 1996, we would be sure when predicting that this year's strong spring and summer increase in aggregate demand will be reflected in tendencies in the physical volume of industrial production. Data on cash flow of components of real value added, based on transactions in giro accounts of enterprises, also confirms the above-mentioned conclusions. The continuous decrease since summer 1995 has obvious seasonal characteristics, as noticed in the same period in the last two years. The cash flow of real value added in manufacturing industry in the first two months of 1996 is 2% higher than in the same period in 1995. The activity indicator based on cash flows is higher than the indicator of activity based on physical volume, which should not be interpreted as a particularly favorable development. The cash flow indicator is influenced by the monthly schedule of expenditures and earnings, as well as the general level of liquidity.

## TRADE

The obvious stagnation in trade activity at the beginning of the year was caused by the cessation of growth of imports and credible income policy. In the last couple of issues of the Bulletin, we noted that the real volume of trade was growing at high rates in great part thanks to trading with imported goods, which is now confirmed. Slow-down of the rate of growth of domestic demand and the corresponding demand for real money, stabilization of the average monthly level of imports and gradual leveling of prices on domestic and international markets have restricted the room for any further increase in trade activity. Trade will, undoubtedly, grow during the summer, but at far lower rates than those recorded immediately after the slow-down of inflation.

## PRICES

April data again confirm the tight correlation between the kuna exchange rate to the German mark and prices of goods. A 0.3% decrease in retail prices and 0.7% decrease in the cost of living were caused by the deflation in prices of goods of 0.5% in retail prices and 0.9% in the cost of living. The intensity of the decrease is further intensified by the seasonal effect. Agricultural produces recorded a 7.6% fall in prices, while agricultural products inclusive of seasonal produces record a 6.4% fall in prices. The similarity of these developments only indicates the inability of our statistics to isolate seasonal effects. Therefore, it is easy to notice the transfer of such falls in prices onto prices of agricultural produces used in the calculation of the cost of living (those products record a 1.5% price deflation). We have to

**CASH FLOW OF VALUE-ADDED COMPONENTS IN TRADE SECTOR**

**MONTHLY RATES OF INFLATION OF CAPITAL GOODS' PRICES (CA), INTER-MEDIATE GOODS' PRICES (I) AND CONSUMER GOODS' PRICES (CO)**

**INTER-INDUSTRY RELATIVE PRICE VARIABILITY IN MANUFACTURING INDUSTRY (standard deviation)**

stress that seasonal effects merely intensify otherwise present deflationary pressure. For example, the prices of clothes and footwear have recorded, on average, a 0.5% decrease in April. Cumulatively, we record a 0.3% inflation in retail prices for the first four months of 1996, as well as a 1.4% inflation in the cost of living in the same period. Industrial producers' prices, which rose by 0.4% in April are still on a 0.5% lower level than that recorded in December 1995.

The prices of services, on the other hand, keep growing. They grew by 0.7% in both the retail price index and in the cost of living index. Currently they are at a 7% and a 9% higher level respectively than in April 1995. This represents a definite return to the period of rapid growth of relative prices of services. Proving us right to say that a natural market adjustment of the price ratio in circumstances of fast capital inflow (with the simultaneous pressure towards appreciation of the exchange rate and expansion of domestic demand) is clearly at hand. The first effect of the inflow pressures the prices of goods downwards, while the second effect of the inflow pressures the prices of services (which are not involved in international exchange) upwards. As we enter a period of more intensive foreign currency inflow and greater money supply, such developments are going to continue.

Finally, inflation in prices of industrial products appeared to be solely due to growth in prices of consumer goods of 0.9%, caused by isolated and strong inflation in two branches - finished textile products (4.4%) and leather goods (11.4%). Stability in variations of price relations confirms that these are isolated effects within the price system.

## WAGES AND AGGREGATE DEMAND

The real average monthly wage (net) in January 1996 was higher by 7.6% nominally and by 2.7% in real terms than in January 1995. This data indicates that the government's income policy and credible monetary policy succeeded in controlling the negative supply shock that would have inevitably occurred, had a slightly "looser" monetary policy been implemented. That way, conditions were established for the continuing implementation of such policy in 1996.

The expenditures of the household sector have been growing at a much more accelerated rate, due to the fact that they are financed not only from salaries but by decreasing total, in most cases unregistered, savings, as well as by foreign remittances and transfers. Real cash expenditures of the household sector were 10% higher in January 1996 than in January 1995, while the real aggregate money demand was 10.7% higher. Real investment expenditures fell by 46.2%, while government expenditures on goods and services rose by 22.1%. Thus the change in the structure of real expenditures. In comparison with January 1995, the share of real expenditures of the household sector in total real expenditures decreased by 0.4%, the share of investment expenditures decreased by 2.7%, while the share of current government expenditures on goods and services rose by 3.1%.

These changes indicate that developments in aggregate demand are under the strong influence of the fiscal component, whose current share is growing at the expense of its capital share (because the financial flow of investment spending is under the influence of public investment). If the government should not manage to change the ratio of

current and capital expenditures in favor of the latter by the end of 1996, investment could end up being squeezed out, significantly decreasing real output from 1997 onwards.

## MONETARY DEVELOPMENTS

The appearance of the final data for March, 1996 seems like the right moment to reflect on the fulfillment of the first quarter according of the Annual Monetary Projection and to comment on the first "passing time" in 1996.

First of all, it should be noted that there has been a change in the methodology of the monetary statistics, which makes the Annual projection less comparable with the current data. Therefore, we shall be comparing it to the provisional data for March (PLO form). However, the final data might differ from the provisional.

### PLANNED AND REALIZED CHANGES OF BASIC CATEGORIES OF NET DOMESTIC ASSETS, millions of kuna

	Jan - Mar 96 GP	Jan - Mar 1996	Jan - Mar 1995
NDA	1828	2367	712
Bank credits	-238	1414	-545
Central Gov't <sup>1)</sup>	-238	-280	76.1
ONA <sup>2)</sup>	1849	-743	1181
M4	1519	3160	279
Foreign assets net	-310	793.2	-433

1) Net claims on the central government

2) Other assets net

At the first glance it becomes obvious that the growth of total liquid assets was twice as intensive as planned in the Annual projection. The growth of NDA was also very intense, due to an increase in bank credit.

Comparing these data with the first quarter of 1995, it becomes obvious that monetary policy is more expansive in 1996.

Data for the first twenty days of April do not bring any significant changes. Total liquid

assets increased by 686 mil kuna. Foreign currency deposits (+578.8 mil kuna) continue to be the major generator of the growth of M4. Money grew by approximately 100 mil kuna. Since we only have end of the month data for cash in circulation (drop of 34.6 mil kuna), the growth of money could be even smaller at the end of the month.

Kuna deposits, although growing in absolute amount, become relatively less and less significant part of M4.

On the assets side, NDA (net domestic assets) records a mild decrease despite an intense growth of bank credit (890 mil kuna). It should be repeated that the structure of the Monetary survey is changed due to change in the methodology. Deposits are in part transferred from M4 into the Central Government sector, decreasing the total liquid assets by approximately 7%. On the other hand, liabilities and claims on former Yugoslavia are currently shown within "Net foreign claims" instead of "Other claims net". Consequently, net domestic assets increased by 15% - on 20 April, the balance of net domestic assets amounted to more than 22 bil kuna (instead of the previous 19 bil kuna).

Lastly, we should comment on the liquidity of the banking system in the light of restrictive measures introduced by some banks. Balances on DMBs' giro accounts were somewhat lower during the first 15 days of April than in the last couple of months (around 100 mil kuna). The situation changed for the better in the second half of the month, with an average daily balance on giro accounts for the month of April 1996 of 160 mil kuna. By 26 April, the NBC had granted emergency loans to banks on 3 different occasions. There are no indications that the liquidity of the

banking system is endangered to a degree which would require banks to implement such measures.

## EXCHANGE RATE

Appreciation of the kuna to the German Mark, accompanied by a significant media coverage, is a known fact. The average kuna rate in March was 369.5768 kuna for 100 DEM, while in April it was 368.8233 kuna for 100 DEM.

The fact that the kuna remained stable or even depreciated mildly in relation to other currencies (ITL, USD) remained unnoticed. Secondly, the German Mark weakened in relation to other major currencies. In March, 1 German Mark costed 3.41 French Francs i.e. 0.44 British Pounds, while in April prices were 3.37 FF and 0.43 GBP.

Therefore, when we observe the foreign exchange market in its entirety, bearing in mind the world foreign exchange market, we can conclude that the main characteristic of the month of April was stability. Moreover, the nominal effective exchange rate index recorded a 0.2% depreciation, due to the weakening of kuna vis-à-vis the lira and the dollar. Adding the effects of developments in domestic and world prices, we come to a seemingly paradoxical conclusion: the real exchange rate depreciated in April (kuna grew weaker), and our predictions show that such tendencies will continue in May. The real depreciation measured by producers' prices in April amounts to 0.2%, and by retail prices to a high 1% (!), with expected further depreciation of 0.6% in May. Therefore, we conclude that the April excitement over the strong kuna was caused by mostly psychological and political factors with no economic backing.

## BALANCE OF PAYMENTS

Commodity imports and exports in March recorded developments we have already grown used to. Exports of approximately USD 400 mil and imports of USD 633 mil created a USD 233 mil deficit, which is the average expected merchandise trade deficit for this time of year. Both imports and exports were slightly lower in the first quarter of 1996 than in the first quarter of 1995 - exports by 7.2% or USD 83 mil, and imports by 5.2% or USD 72 mil. The drop in exports is caused mainly by the drop in exports of textile products, cardboard products and footwear, indicating an inadequate level of restructuring in these economic activities.

In that sense, the continuation of the main tendencies in the variables of the balance of payments should be noted. One exception is the fact that the January data show an unusual change of sign in the item net errors and omissions (the item indicates an unregistered outflow). The current account deficit is small (USD 21.7 mil). It was created by the merchandise trade deficit of USD 137.4 mil, intensified by the outflow of investment income of USD 9.1 mil and alleviated by USD 47 mil surplus in service trade and USD 77.8 mil inflow from transfers. The capital-financial account records a USD 103.5 mil surplus, so that even after taking into consideration the USD 52 mil fall in reserves of the Central Bank (mainly caused by the effect of the change in world exchange rates), USD 134 mil remains unexplainable on the side of outflow. Those are in total atypical developments, due to the fact that the period taken into account is very short with distinct seasonal effects. The general conclusion should be that these developments could not be characterized as unexpected or unpredicted changes.

DEPOSIT MONEY BANKS' ANNUAL INTEREST RATES

INTERENTERPRISE ARREARS REPORTED TO PAYMENTS INSTITUTE

## MONEY MARKETS AND INTEREST RATES

The last issue of the Bulletin showed relatively stable interest rate on the money market, at levels between 29 and 30% per annum, maintained throughout March 1996. The beginning of April, on the other hand, brought a decrease in the interest rate toward the 28% level, bringing hope that there is flexibility of interest rates downwards. This is the lowest level of interest rate on the money market since the December growth of interest rates. However, the decrease seems to have been only temporary, for interest rates surged toward high levels again, up to the level of 31%, which happened only once before, in mid-February 1996. The difference lies in the fact that on this occasion certain loans were realized with over 50% interest, causing huge media attention. Looking only at the last available data, we can say the average level was around 30% per annum.

DMBs' lending rates show a slight decrease, following the sudden upsurge in January. After the decrease of 0.6% in February compared to January, interest rates are lower by a further 0.9% in March (loans without the currency clause). With deposit rates (deposits without the currency clause) remaining at the same level, the margin between those two rates fell below 20%. The 0.6% fall in the interest rate on loans without the currency clause is also interesting, but we can only speculate whether the reason for such tendencies in the lending rate is the possibility for sound banks to make profits on the money market (providing their clients with cheaper credit) or the satisfactory level of liquidity of the banking system as a whole.

Talking about the cause for high interest rates, we have to mention the problem of rapid growth of unsettled payment orders to enterprises. This indicates the depth of structural problems and the cause of high risk premium. Since the March data is not yet available, expected further growth of this category will have to be verified in the next issue of the Bulletin.

## STATE BUDGET

Judging from the daily balances on the central government's giro account, the central government's treasury is in the position defined after August 1995. Within-monthly peaks, attained in the first week of each month, were much more distinct in the first quarter of 1996 than in the last quarter of 1995, while in April the liquidity peak was significantly lower. This is not surprising given the seasonal imbalance between the flow of public revenues and expenditures.

Consequently, since March 1996, the government has been borrowing intensely on domestic financial markets. We still have to see how the significant short-term credits coming due for payment in May will affect on the liquidity of the state budget.

### Classification and Presentation of Data on Claims and Liabilities

Data on financial institutions' claims and liabilities are classified according to institutional sectors and financial instruments. Institutional sectors are: financial institutions, central government and funds, other domestic sectors and foreign sector.

The financial institutions sector includes following sub-sectors: monetary authorities (the central bank), deposit money banks (DMBs), other banking institutions and nonbank financial institutions. The central bank is the National Bank of Croatia (NBC). Deposit money banks are institutions granted, by the National Bank of Croatia, the permission to perform banking business services in accordance with the Law on Banks and Savings Banks. Other banking institutions comprise savings banks. Since July 1995 savings banks have been under auspices, and have operated with the permission of the NBC. Nonbank financial institutions are financial institutions not classified as banks or other banking institutions (insurance companies, investment funds, savings cooperatives etc.)

The central government and funds comprises government institutions including Croatian Roads Company, Bank Rehabilitation Agency and Croatian Guarantee Agency, and following central government funds: Croatian health insurance fund, state retirement funds, employment agency, Croatian Privatization Fund, Croatian water company and Croatian Bank for Reconstruction and Development. Other domestic sectors are other central government funds (those not classified under the central government and funds sector), local government authorities and local funds, public and private companies and households, including craftsmen and non-profit institutions. In some tables other domestic sectors are divided into following sub-sectors: local governments and funds (including other republic funds, local government authorities and local funds), public and private enterprises, and households (including craftsmen and non-profit institutions).

Foreign sector includes foreign legal entities and individuals.

All data on claims and liabilities refer to balances at the end of the reporting period. Foreign exchange items are reported in their kuna equivalent at the midpoint NBC exchange rate at the end of the reporting period.

### Table A1: Monetary and Credit Aggregates

The table shows data on some basic monetary and credit aggregates, including their monthly growth rates.

*Reserve money* has been taken over in its entirety from the Monetary Authorities Accounts (Table C1).

*Money (M1)* is defined in the same way as the corresponding item in the Monetary Survey (Table B1). It comprises cash outside banks, deposits with NBC by other banking institutions and other domestic sectors as well as DMBs' demand deposits. *Money (M1a)* comprises currency outside banks and DMBs' demand deposits, increased by the demand deposits of the central government and funds with DMBs.

*Broadest money (M4)* comprises *Money (M1)*, savings and time deposits, foreign currency deposits as well as bonds and money market instruments (all above components taken over from the Monetary Survey (Table B1).

*Net domestic assets* are defined as a difference between total liquid assets and foreign assets (net).

*Domestic credit* comprises DMBs' claims on other domestic sectors, other banking institutions and nonbank financial institutions.

### Table B1: Monetary Survey

The monetary survey shows consolidated data from the Monetary Authorities Accounts (Table C1) and DMB's Accounts (Table D1).

*Foreign assets (net)* are the difference between total foreign assets and total foreign liabilities of the NBC and DMBs.

*Domestic credit* is the sum of corresponding items from Monetary Authorities Accounts and DMB's accounts. Claims on central government and funds are reported on the net basis, i.e. decreased by central government and funds' deposits with the NBC and DMBs.

*The money* is the sum of currency outside banks, deposits by other banking institutions with the NBC, deposits by other domestic sectors with the NBC and DMB's demand deposits (item *Demand deposits* in DMB's Accounts, Table D1).

Items *Savings and time deposits*, *Foreign currency deposits* as well as *Bonds and money market instruments* are entirely taken over from the DMB's Accounts, while item *Restricted and blocked deposits* represent the sum of correspondent items from Monetary Authorities Accounts (excluding DMBs blocked deposits with the NBC) and DMBs Accounts. *Other items (net)* are unclassified liabilities decreased by unclassified assets.

**Table B2: Number of Reporting Deposit Money Banks and Savings Banks and Their Classification by Size**

The table shows the total number of DMBs and savings banks which report monthly to the NBC. Their operation is shown in the DMB's/savings banks' accounts. *Total number of reporting DMBs* includes former branches of banks with their headquarters in the former Yugoslavia, which are currently under liquidation.

Due to the fact that savings banks were not legally obliged to report their operation to the NBC until July 1995, the total number of savings banks refers only to those savings banks which reported voluntarily to the NBC. In June 1995, coordination of the registration of savings banks with the Law on Banks and Savings Banks, and reporting to the NBC became compulsory. Since June 1995, total number of savings banks reporting to the NBC has corresponded with the total number of registered savings banks. The table also shows the classification of reporting DMBs and savings banks according to their total assets. Former branches of banks with their headquarters in the former Yugoslavia are classified in relation to the size of their total assets decreased by households' foreign currency deposits transferred to resident banks.

**Table C1: Monetary Authorities Accounts**

The table reports data on claims and liabilities by monetary authorities. *Foreign assets* include the following forms of foreign currency and kuna claims on foreign legal entities and individuals: monetary gold, holdings of special drawing rights, foreign cash in vaults, reserve position in the International Monetary Fund, current account balances with foreign banks, time deposits in foreign banks, foreign currency security investments and other claims.

*Claims on central government and funds* are loans and overdue claims on the budget of the Republic of Croatia. *Claims in kuna* are short-term loans granted for the purpose of overcoming the incoordination between incoming revenues and execution of budgetary expenditures, long-term loans granted by special decrees by the government of the Republic of Croatia, and overdue claims on the State Budget for liabilities to the IMF and foreign banks. *Claims in foreign currency* is a counter-entry to the liability to the IMF based on the succession of membership in that institution.

*Claims on other domestic sectors* are loans and overdue claims on other domestic sectors.

*Claims on DMBs* are credit to DMBs, deposits by the NBC with DMBs and overdue claims on DMBs. *Credit to DMBs* is split according to the type of financial instruments. *Refinancing of DMBs* include loans granted within general and selective quotas up to the end of 1993, as well as advances to DMBs for performing currency exchanges. Refinancing loans granted within the general and selective quotas were paid back in their entirety by the end of April 1994. In July 1994, they were formally revoked. Item *Lombard credits* comprises credits to DMBs for regular maintaining of the day-to-day liquidity, which were replaced by lombard credits in December 1994. Overdue claims on DMBs comprise loans due, giro account overdrafts and banks' undiscipline in allocation and maintenance of statutory reserve requirements.

*Reserve money* consists of currency outside banks, cash in DMBs' vaults, DMBs' deposits with the NBC, other banking institutions' deposits and other domestic sectors' deposits with the NBC. *DMBs' deposits* are: giro account balances, statutory reserves deposited on a special account with the NBC as well as NBC bills on obligatory basis. *Deposits by other banking institutions* are: giro account balances of savings banks as well as statutory reserves of savings banks' deposited on a special account with the NBC. *Deposits by other domestic sectors* are: other domestic sectors' giro account balances (this refers to accounts opened with the NBC by October 1994, since when they have been in the process of transition into deposits with the DMBs).

*Restricted and blocked deposits* are mainly import deposits. Blocked foreign currency deposits are funds deposited on a special account with the NBC for the purpose of covering the unpaid liabilities due to foreign creditors.

*Foreign liabilities* include use of IMF credits and liabilities to international financial institutions.

*Central government and funds deposits* are demand deposits and foreign currency deposits of the central government and funds with the NBC.

*NBC bills* are NBC bills on voluntary basis.

*Capital accounts* include reserves, funds, undistributed profit and f/c revaluation adjustment (net).

*Other items (net)* are unclassified liabilities decreased by unclassified assets of the NBC's accounts.

**Table D1: Deposit Money Banks' Accounts**

DMBs accounts include data on Croatian DMBs' claims and liabilities and data on claims and liabilities of former branches of banks with their

headquarters in former Yugoslavia, which are now in the process of liquidation. DMBs' mutual claims and liabilities are consolidated.

*Reserves* with the central bank are: kuna cash in vaults and kuna deposits with the central bank.

*Foreign assets* are the following forms of kuna and foreign currency claims on foreign legal entities and individuals: foreign cash in vaults, nostro letters of credit and other collateral's with foreign banks, securities, loans, equities and arrears. Unregulated claims on institutions of former Yugoslavia are shown separately.

*Claims on central government and funds* are the following forms of claims in kuna and foreign currency: securities, loans, equities and arrears (including claims for interest charged and due 30 and more days prior to the reporting date). Main forms of claims on the central government are shown separately: bonds issued in accordance with the Decree Law on the Transformation of Household Foreign Exchange Savings Deposits with Banks into the Public Debt of the Republic of Croatia, and bonds issued in accordance with the Law on the Issue of Bonds for the Restructuring of the Economy of the Republic of Croatia.

*Claims on other domestic sectors* include the following claims in kuna and foreign currency: securities, loans (including acceptances), equities and claims due.

Same forms of kuna and foreign currency claims are included in claims on other banking institutions and nonbank financial institutions, with one difference: *Claims on other banking institutions* also include deposits with those institutions.

Items *Demand deposits, Savings and time deposits, Foreign currency deposits* as well as *Bonds and money market instruments* comprise banks' liabilities to other domestic sectors, other banking institutions and nonbank financial institutions.

*Demand deposits* include giro and current accounts balances and other transferable deposits, decreased by currency in the payment system, i.e. checks in banks' vaults and checks in collection.

*Savings and time deposits* are: kuna sight deposits as well as kuna time and notice deposits.

*Foreign currency deposits* are: foreign currency sight deposits as well as foreign currency time and notice deposits.

*Bonds and money market instruments* are: banks' liabilities for securities issued (net) and loans obtained.

*Foreign liabilities* comprise the following forms of kuna and foreign currency liabilities to foreign legal entities and individuals: giro and current accounts, loro letters of credit and other collateral's, savings and time deposits, loans received

and liabilities due. Unregulated liabilities to institutions in former Yugoslavia are shown separately within foreign liabilities.

*Central government and funds' deposits* are all forms of DMBs' kuna and foreign currency liabilities (except restricted and blocked deposits) to the central government and funds.

*Credit from central bank* comprises loans obtained from the NBC and deposits by the NBC with DMBs. Repurchase of securities is also considered and treated as loan.

*Restricted and blocked deposits* comprise the following DMBs' liabilities: kuna and foreign currency restricted deposits by other domestic sectors, other banking institutions, nonbank financial institutions, central government and funds as well as foreign legal entities and individuals; households' blocked foreign currency deposits, regulated by the Decree Law on the Transformation of Household Foreign Exchange Savings Deposits with Banks into the Public Debt of the Republic of Croatia, foreign currency deposits by domestic sectors to cover outstanding liabilities due to foreign creditors and foreign currency deposits with former branches of banks with their headquarters in former Yugoslavia.

*Capital accounts* are share capital, reserves, provisions, current profit or loss, undistributed profits and f/c revaluation adjustments (net).

*Other items (net)* are unclassified liabilities decreased by unclassified assets.

## Tables D2-D12

This group of tables (with the exception of Table D5) represents an elaborate presentation of appropriate items of claims and liabilities of DMBs' Accounts (Table D1).

*Claims* and *Liabilities* related to former branch banks with their headquarters in former Yugoslav bank's branches are shown under the separate item *Adjustment for former branch banks* with an exception of Table D8: Foreign currency deposits with DMBs, which does not contain this item. Foreign currency deposits with former branch banks are classified as restricted and blocked deposits, and therefore shown as a separate item in the Table D12.

### Table D2: Deposit Money Bank's Foreign Assets

This table shows DMBs' claims on foreign legal entities and individuals.

*Foreign assets* of the DMBs comprise foreign assets in kuna and foreign currency as well as DMBs' claims on the former Yugoslavia and the

adjustment for former branches. Item *Claims on former Yugoslavia*, reported separately in its full amount in the Table D1, is in the Table D2 divided into claims of the DMBs (shown under item *Claims on former Yugoslavia*) and claims of former branches (shown as a separate item within *Adjustment for former branch banks*).

*Claims on foreign banks* and *Claims on foreign nonbanks* (total and by financial instruments) are shown separately within both foreign assets in kuna and in foreign currency. Within *Claims on former Yugoslavia*, those in kuna and in foreign currency are shown separately.

**Table D3: Deposit Money Banks' Claims on the Central Government and Funds**

The table shows kuna and foreign currency DMBs' claims on the central government and funds.

*Bonds* arising from blocked foreign currency savings deposits are issued in accordance with the Decree Law on the Transformation of Household Foreign Exchange Savings Deposits with Banks into the Public Debt of the Republic of Croatia

*Big bonds* are those issued in accordance with the Law on the Issue of Bonds for the Restructuring of the Economy of the Republic of Croatia.

*Other claims* are all other DMBs' kuna and foreign currency claims on central government and funds: securities, loans, equities, postponed interest arrears (claims for interest due but not payable before relations with foreign creditors are regulated) and arrears (including claims for interest due 30 and more days prior to the reporting date).

*Adjustment for former branch banks* refers entirely to other central government's bonds.

**Table D4: Deposit Money Bank's Claims on Other Domestic Sectors**

The table shows DMBs' kuna and foreign currency claims on other domestic sectors, classified according to financial instruments: bills of exchange, commercial bills, bonds, other short-term securities, loans and advances (including acceptances and commodity futures), equities and arrears.

By October 1994, foreign currency loans were granted only when counterparted by DMB's loan abroad, in bank's name and on behalf of the final beneficiary of the loan. Due to the fact that foreign debts are still not entirely regulated, there is an item *Postponed interest arrears*. It refers to claims on interest due at the original due date, but the

obligation to pay is postponed until relations with foreign creditors are regulated.

*Adjustment for former branch banks* refers in greater part to foreign currency loans to enterprises.

**Table D5: Distribution of Deposit Money Banks' Loans by Domestic Institutional Sectors**

The table shows data on kuna and foreign currency loans granted by DMBs to domestic sectors, including acceptances and commodity futures.

The above data do not include loans of former branch banks.

**Table D6: Demand Deposits with Deposit Money Banks**

The table shows demand deposits with DMBs, classified by domestic institutional sectors.

Demand deposits are the sum of other domestic sectors', other banking institutions' and nonbank financial institutions' giro and current accounts balances, as well as other transferable deposits, decreased by currency in the payment system, i.e. by amount of checks in banks' vaults and checks in collection.

*Adjustment for former branch banks* mostly refers to demand deposits by private enterprises and households.

**Table D7: Time and Savings Deposits with Deposit Money Banks**

The table shows *Savings deposits of households* in kuna as well as *Time and notice deposits* in kuna by other domestic sectors, other banking institutions and nonbank financial institutions with DMBs.

*Adjustment for former branch banks* refers in larger part to households' savings and time deposits.

**Table D8: Foreign Currency Deposits with Deposit Money Banks**

The table shows foreign currency savings and time deposits by other domestic sectors, other banking institutions and nonbank financial institutions with DMBs. Foreign currency savings deposits are all foreign currency sight deposits, while foreign currency time deposits also include foreign currency notice deposits.

Foreign currency deposits with former branch banks are not included in this table.

**Table D9: Bonds and Money Market Instruments**

The table shows DMBs liabilities for securities issued (net) and loans received from other domestic sectors, other banking institutions and nonbank financial institutions.

*Money market instruments (net)* comprise DMBs net liabilities for NBC bills, bills of exchange (issued and accepted) and other securities issued.

*Bonds (net)* comprise DMBs net liabilities for kuna and foreign currency bonds issued.

*Other domestic borrowings* comprises loans received, reported total and classified by institutional sectors.

**Table D10: Deposit Money Banks' Foreign Liabilities**

The table shows DMBs' total foreign currency and kuna liabilities to foreign legal entities and individuals, with the exception of restricted kuna and foreign currency deposits by foreign legal entities and individuals.

DMBs' foreign liabilities comprise foreign currency liabilities, foreign kuna liabilities, DMBs' liabilities to the former Yugoslavia and adjustment for former branches. Item *Liabilities to the former Yugoslavia*, which is reported separately in the Table D1, is here divided into part of the liabilities referring to DMBs (shown as item *Liabilities to the former Yugoslavia*) and the part referring to of former branches (reported as a separate item within the *Adjustment for former branch banks*).

Within foreign kuna and foreign currency liabilities, liabilities to foreign banks are reported separately from liabilities to foreign nonbanks (total and by financial instruments). Within liabilities to the former Yugoslavia, liabilities in foreign currency are reported separately from kuna liabilities.

Item *Postponed interest arrears* on foreign currency loans showing within foreign currency liabilities refers to liabilities for interest due on the original due date, but payable after the regulation of relations with foreign creditors.

**Table D11: Central Government and Funds Deposits with Deposit Money Banks**

The table reports total DMBs' kuna and foreign currency liabilities to the central government and funds, with the exception of restricted (kuna and foreign currency) deposits by the central government and funds with DMBs.

Kuna and foreign currency deposits by Republic of Croatia and republic funds are shown separately. Kuna deposits comprise demand deposits, kuna time and notice deposits, and kuna

loans obtained from the central government and funds. Foreign currency deposits comprise foreign currency sight deposits, as well as foreign currency time and notice deposits.

The table does not state the item *Adjustment for former branch banks* because the salvage value of former branch does not include liabilities to the central government and funds.

**Table D12: Restricted and Blocked Deposits with Deposit Money Banks**

The table shows restricted and blocked deposits by the central government and funds, other domestic sectors, other banking institutions, nonbank financial institutions and foreign legal entities and individuals with DMBs.

*Restricted deposits* include three categories of deposits: restricted (kuna and foreign currency) deposits, blocked foreign currency deposits and foreign currency deposits with former branch banks.

*Blocked foreign currency deposits* include households' foreign currency deposits regulated by the Decree Law on the Transformation of Household Foreign Exchange Savings Deposits with Banks into the Public Debt of the Republic of Croatia, as well as domestic sectors' deposits regulated by the Decree Law on the Settlement of Arrears to External Creditors.

**Table E1: Savings Banks' Accounts**

Savings banks' accounts include the data on savings banks' claims and liabilities. Savings banks' mutual claims and liabilities are consolidated.

*Reserves* are savings banks' kuna cash in vaults and kuna deposits with the NBC.

*Foreign assets* refer to foreign currency in savings banks' possession either within arrangements which are in the process of liquidation due to the adjustment to the new Law on Banks and Savings Banks or within arrangements with DMBs regarding performing currency exchange transactions.

*Claims on central government and funds* are all kuna and foreign currency claims on the Republic of Croatia and central government funds.

*Claims on other domestic sectors* are the following forms of kuna and foreign currency claims: securities, loans, equities and claims due. Claims on local governments and funds, enterprises and households, are shown separately within this item.

*Claims on DMBs* include the following forms of kuna and foreign currency claims on DMBs: savings and time deposits, securities, loans, equities

and arrears. Item *Claims on nonbank financial institutions* comprises the same forms of kuna and foreign currency claims.

*Demand deposits* comprises other domestic sectors' and nonbank financial institutions' kuna giro and current accounts balances as well as other transferable deposits.

*Savings and time deposits* are households' savings deposits in kuna as well as time and notice deposits by other domestic sectors, domestic deposit money banks and nonbank financial institutions.

*Foreign currency deposits* are households' foreign currency savings and time deposits. These deposits, however, represent transactions in liquidation owing to adjustment to the new Law on Banks and Savings Banks.

*Bonds* are liabilities by other banking institutions for securities issued (net), as well as loans received from other domestic sectors, domestic DMBs and nonbank financial institutions.

*Foreign liabilities* are foreign savings and time deposits in foreign currency. These deposits represent transactions in liquidation owing to adjustment to the new Law on Banks and Savings Banks.

*Central government deposits* are kuna time and notice deposits by the Republic of Croatia and central government funds.

*Credit from central bank* comprise kuna loans obtained from the National bank of Croatia.

*Capital accounts* are: share capital, reserves, provisions, current profit or loss, undistributed profit and f/c revaluation adjustment (net).

*Other items (net)* are unclassified assets decreased by unclassified liabilities.

#### Table F1 - Credit Rates of National Bank of Croatia

The table shows interest rates used by the NBC to calculate and charge interest on loans and on all other claims.

Lending NBC interest rates are being set by special decrees of the Council of the National Bank of Croatia, on annual basis. Exceptionally, since July 1995, interest rate charged by NBC on lombard credits has been 1.5% higher than the weighted average interest rate on NBC bills on voluntary basis (which serve as collateral for lombard credits) in cases when the weighted average interest rate is higher than 16.5. Congruently, from July 1995 onwards, the table reports weighted average interest rate on lombard credits.

Time series presented in the table contain certain breaches, due to changes in NBC's monetary policy instruments. Consequently, until November 1994, column 4 shows interest rates on regular

credits for maintenance of day-to-day liquidity, which were granted based on securities portfolio, and from December 1994 onwards, interest rates on lombard credits.

Furthermore, data shown in column 6 refer, until September 1994, to interest rates on special credits for savings deposits' payments and for payments from households' current accounts, and since October 1994 to interest rates on daily credits for savings deposits and current accounts in kuna. Daily credits, as opposed to special credits, are paid back on the same day.

Interest rates reported in column 9 refer to the use of statutory reserves, which was being used by the banks (in prescribed percentage) to maintain day-to-day liquidity until September 1994. Interest rates paid until September 1994 on the use of statutory reserve funds in amount above prescribed and/or for longer period than allowed are shown in column 10. Since October 1994, interest rates paid on the use of statutory reserve funds are the same as those used for any other form of financial undiscipline, in accordance with the late interest regulations (shown in column 11).

Until July 1994 the same interest rate was applied to funds used above amounts available on giro accounts and to inaccurately calculated or under-appropriated statutory reserves (reported in column 10). From July to September 1994, interest rate applied to the use of those funds was 21%, and since October 1994 the same interest rates have been applied as for other forms of financial undiscipline, shown in column 11.

#### Table F2: Deposit Rates of National Bank of Croatia

The table shows interest rates paid by the NBC on funds deposited with the NBC as well as on securities issued.

Interest rates paid by the NBC for appropriated statutory reserve funds are being set by the Council of the NBC. Until 7 October 1993, NBC was setting different exchange rates for statutory reserve funds based on savings and time deposits. Therefore, for that period the table reports weighted average interest rate on appropriated statutory reserve funds (column 3). From 8 October 1993 until the end of February 1994, NBC paid no interest on appropriated statutory reserve funds, and since March 1994, uniform rate has been applied to these funds.

Interest rates on NBC bills on obligatory basis are set by the Council of the NBC.

Until October 1993, interest rates on NBC bills on voluntary basis were also set by the Council of the NBC, while since November 1993, they have

been set at NBC bills' auction sales. Congruently, since November 1993, columns 5, 6 and 7 report weighted average interest rates attained in auctions of the NBC bills.

Until October 1994, interest rates on NBC bills on voluntary basis due in 30 and 90 days are reported in columns 6 and 7 respectively.

**Table F3: Deposit Money Banks' Reserves on Obligatory Basis**

This table shows data on monthly averages of day-to-day balances of reserves on obligatory basis by DMBs with the NBC.

*Reserve requirement* (column 3) represents the prescribed amount of funds banks are required to deposit on a special statutory reserve account with the NBC, or to maintain (in average) on their giro accounts or in vaults. This amount corresponds with the statutory reserve instrument of January 1995, while until December 1994 it comprised two instruments: statutory reserves and liquid assets requirement - LAR (except for the part in which banks were conforming to this requirement by registering NBC bills on voluntary basis).

Column 4 shows weighted average reserve requirement ratio as a percentage of the reserve requirement (column 3) in the reserve base (NBC prescribes different reserve requirement ratios for different categories of deposit).

Column 5 shows the portion of the reserve requirement banks are required to deposit on a special statutory reserves account with the NBC (until December 1994 this amount corresponds with the statutory reserves instrument, while since January 1995, banks have been required to deposit at least 75% of the total reserve requirement on a special account with the NBC).

Column 6 shows the percentage of the statutory reserves deposited with the NBC in the total reserve requirement.

Column 7 shows the total amount of other deposits with the NBC on obligatory basis, which comprises NBC bills on obligatory basis, part of NBC bills on voluntary basis used by the banks to maintain the prescribed minimal liquidity (LAR), and special statutory reserves.

Column 8 shows the total reserve requirement as a sum of reserve requirement and other deposits with the NBC on obligatory basis. Column 9 shows the percentage of total reserve requirement in the reserve base.

Column 10 shows weighted average remuneration rate for all forms of immobilized funds (i.e. for all components of total reserve requirement).

Column 11 shows the use of obligatory reserves, which includes use of appropriated statutory reserve funds (authorized and unauthorized), inaccurately calculated statutory reserves, non-maintenance of the prescribed minimal liquidity, i.e. (since January 1995) non-maintenance of the minimal average giro account and vault balance (determined in accordance with the calculation of statutory reserves), unregistered amount of the NBC bills on obligatory basis and inaccurately calculated special statutory reserves.

**Table F4: Deposit Money Banks' Liquidity Indicators**

The table reports monthly averages of day-to-day balances of some indicators of DMBs' liquidity.

Column 3 shows free reserves, defined as bank's total reserves (on giro accounts and in vaults) decreased by the minimal average giro account and treasury balance, as prescribed by instruments of the NBC (until December 1994 by the requirement for banks' minimal liquidity, and since January 1995 by statutory reserve requirement).

Column 4 shows the primary liquidity ratio as a percentage of monthly day-to-day free reserves averages in monthly day-to-day averages of deposits which constitute the reserve base.

Column 5 shows the monthly average of day-to-day balances of secondary liquidity sources used. Secondary liquidity sources comprise: use of statutory reserves (until October 1994), regular loans for maintenance of day-to-day liquidity (until November 1994), use of funds exceeding those available on bank's giro account (until October 1994), initial loans (since October 1994), lombard credits (since December 1994), intervention credits for overcoming illiquidity (since October 1994), as well as outstanding liabilities due to the NBC.

Column 6 reports monthly average of day-to-day balances of NBC bills on voluntary basis (until December 1994, this amount is decreased by the portion of voluntarily registered NBC bills used by banks to maintain the prescribed minimal liquidity).

**Table G1: Deposit Money Banks' Credit Rates**

The table contains weighted averages of DMBs' monthly interest rates on kuna and foreign currency loans, reported on a yearly basis.

Columns 3 and 4 show interest rates on the interbank daily and overnight money markets, according to information received from Money Market Zagreb. From December 1993 until May 1995, interest rates on overnight loans were identical

to the NBC discount rate. Until December 1993 and since July 1995, interest rates charged for overnight loans equaled to daily weighted average interest rates reached on the daily money market.

Data on DMBs' interest rates on kuna and foreign currency credits are based on DMBs' periodic reports. Basis for calculation of weighted averages are amounts of credits bearing corresponding interest rates, which were disbursed during the reported month, with the exception of interest rates on giro and current accounts credit lines, for which weighted averages were calculated based on the balance of these loans at the end of the reported month.

Column 5 shows interest rates on total (short-term and long-term) kuna credits not indexed to foreign currency. Interest rates on short-term kuna credits (shown in column 6) also include interest rates on discounted short-term securities (not indexed to foreign currency), weighted based on their face value.

Column 8 shows interest rates on total (short-term and long-term) kuna credits indexed to foreign currency, including interest rates on discounted short-term securities indexed to foreign currency.

Interest rates on foreign currency credits (columns 9, 10 and 11) refer to credits released in Deutsche Mark or US dollars in a reported month, while weighted averages are calculated based on their kuna equivalent using current exchange rate. Credits released in other currencies are not included in this table.

Relative significance of particular interest rates (reported in the last line of the table) refers to data for the last period included in the table. It is calculated as a percentage of corresponding credit category (to which exchange rates apply) in total credits included in the calculation of weighted averages for that period.

#### **Table G2: Deposit Money Banks' Deposit Rates**

The table shows weighted averages of monthly DMBs' interest rates on kuna and foreign currency deposits, reported on a yearly basis.

Data on interest rates on DMBs' deposits are obtained from DMBs' periodic reports.

Column 3 reports weighted averages of monthly interest rates on total kuna deposits (sight deposits, savings and time deposits) not indexed to foreign currency. Weighted averages of monthly interest rates on total kuna deposits indexed to foreign currency are reported in column 6.

Interest rates on foreign currency deposits refer to deposits received in Deutsche Mark or US

dollars, while weighted averages are calculated based on their kuna equivalent using current exchange rate. Deposits received in other foreign currencies are not included in the data reported in this table.

Basis for calculation of weighted averages are end-of-month balances of deposits. Exceptions are kuna and foreign currency time and savings deposits for which weighted averages are calculated (since July 1995) based on amounts of those deposits received during the reported month. Weighted averages of interest rates on total kuna and foreign currency deposits (columns 3 and 7) are weighted by the end-of-month balances of all categories included in the calculation.

Kuna and foreign currency deposits used as a credit collateral are included, while restricted deposits (deposits used for payment of imports and other restricted deposits) are not included into the calculation of weighted averages.

#### **Table G3: Deposit Money Banks' Trade with Foreign Exchange**

Data on trade with foreign exchange between DMBs comprise transactions of purchase and sale of foreign exchange on domestic foreign currency market. The transactions are classified by categories of participants (legal entities or individuals, banks, NBC). Source of data are DMBs periodic reports on trading with foreign exchange, sent to the NBC on a regular basis. The amounts are stated in Deutsche Mark, converted from other foreign currencies using the NBC's midpoint exchange rate (reporting period average).

#### **Table H1-H4: Balance of Payments**

Balance of payments is based on the methodology of the International Monetary Fund (Balance of Payments Manual, fifth edition, 1993). Sources of data are following: reports of the State Bureau of Statistics, reports of transportation companies, reports of deposit money banks, Croatian Bank for Reconstruction and Development and the National Bank of Croatia.

Data on international flows of merchandise trade commodities are compiled by the State Bureau of Statistics on the basis of the customs declaration forms. Other data required for compilation of the balance of payments are collected and processed directly by the NBC.

Services are, except for the data on the international cargo and passenger transport, reported on cash-flow basis.

Earnings from traveling (tourism), are calculated as a total value of: purchase of foreign currency and checks from nonresident natural persons, foreign exchange remittances to accounts owned by companies offering tourist services, sales of domestic currency and traveler's checks abroad, sales of domestic goods and services for foreign currency to nonresident natural persons, foreign exchange checks and credit cards charges in the country, sales of foreign goods to nonresident natural persons, purchase of foreign currency in casinos, 25% of the value of purchase of currency and traveler's checks from resident natural persons and 25% of the value of cash and traveler's checks deposited to resident natural persons foreign currency accounts.

Expenditures from traveling (tourism) industry, are calculated as total value of: payments for business travels, scholarships and specialization, payments for tourist trips organized by domestic tourist agencies, 25% of the value of sales of foreign currency and traveler's checks to resident natural persons and 20% of the value of currency and checks drawn from resident natural persons' foreign currency accounts.

Other services include investment works, construction and installation projects abroad, representation fees, insurance, freight and forwarding services, postal services, costs of Croatian representative offices abroad, unclassified services and 25% of the value of foreign currency transfers from foreign currency accounts to foreign countries.

Current transfers are classified into two categories: transfers to the central government and transfers to other sectors. Transfers to and from the central government consist of retirement and social welfare payments, financial aid payments, gifts, as well as of import and export bearing no payment obligation. Credits of transfers to other sectors represent the total value of foreign remittances received. Debits of other sectors transfers represent 75% of the value of transfers from resident natural persons foreign currency accounts to foreign countries.

Direct foreign investments are calculated partly from the data on imports of goods to be invested in resident corporations, partly from the data on payments made by nonresidents in connection with investments in the Republic of Croatia.

Data on other investment are structured into following institutional sectors: monetary authorities, general government, banks and other sectors. The scope of sectors somewhat differs from the corresponding scope in the balance sheets of financial institutions. General government sector

includes the central government and funds, local government authorities and local funds. Banking sector includes DMBs.

Item *Other investments - assets - banks currency and deposits*, represents the change in total foreign currency held by banks authorized to do business with foreign countries, i.e. banks with full authorization. Inflow from foreign countries, reported in the item *Other investments - assets - other sectors - currency and deposits*, is calculated as a difference between the sum of 75% of the value of currency and traveler's checks deposited to resident natural persons' foreign currency accounts and 75% of the value of currency and checks purchased from resident natural persons and the sum of 80% of the value of currency and traveler's checks withdrawn from resident natural persons foreign currency accounts and 75% of the value of sale of currency and traveler's checks to resident natural persons.

Data on loans for all previously mentioned sectors are based in greater part on originally concluded and registered credit agreements included in the NBC database. These do not include unallocated debt of the former Yugoslavia.

Changes in the total current balances of the NBC's foreign currency reserves are calculated using current US dollars exchange rates for currencies that form the reserves, and they are denominated in US dollars on the day when the balance of payments is compiled (end of month, end of quarter or year).

#### Table H8: External Debt

The table shows the balance of external debt at the end of the period, in millions of US dollars, according to the NBC's midpoint foreign currency rate at the end of the period.

External debt is defined as total value of following liabilities for foreign credits: outstanding debt (including principal arrears) and interest arrears.

Data are formed following the criteria of the final user, i.e. these include foreign credits used by the final users from the Republic of Croatia (and also those for which the debtor to foreign country is a bank from the former Yugoslavia).

Interest arrears are estimated by using originally agreed interest rates and do not include late interest.

Short-term credits do not include the use of short-term interbank credit lines.

Unallocated debt of the former Yugoslavia is not included.
